Introduction

The Model 2182 Nanovoltmeter provides a RATIO function. The RATIO function (V1/V2) displays the proportional relationship between the two voltage input channels (DCV1 and DCV2). To achieve specified accuracy, LSYNC (line cycle synchronization) must be enabled, "ON."

Refer to page 2-7 of the Model 2182 User's Manual Rev C, or page 2-8 of the Model 2182 User's Manual Rev. D for the instructions to enable LSYNC from the front panel or via the remote interfaces (GPIB or RS-232).
