Series 2260B

- 360W, 720W, and 1080W versions with voltages up to 800V and currents up to 108A
- Programmable voltage or current rise and fall times prevents damage to low impedance loads from inrush current
- Constant current priority setting reduces voltage and current overshoot when powering LEDs
- Programmable internal resistance simulates battery output
- Choose from analog control, USB, LAN, or optional GPIB interface for automated control
- Fit six 71mm wide 360W units or three 142mm wide 720W units or two 214mm wide 1080W units in a standard rack width to minimize bench and test system space

APPLICATIONS
- Environmental test, stress test, and accelerated life testing
- LED and high power component testing
- Automotive testing
- Battery research and test
- Production test

Programmable DC Power Supplies

Source a wide range of voltages and currents with the 360W, 720W, or 1080W Series 2260B Programmable DC Power Supplies. Choose from 12 versions with voltage output of 30V, 80V, 250V or 800V. The 360W versions can output current of 36A, 13.5A, 4.5A, or 1.44A; the 720W models can output 72A, 27A, 9A, or 2.88A; and the 1080W instruments can output 108A, 40.5A, 13.5A or 4.32A. This wide range of output voltages and current, combined with multiple interface choices, makes the Series 2260B ideal for use in a wide range of applications, including research and design, quality control, and production test.

Control the Voltage or Current Rise Time to Reduce Inrush Current and Prevent Device Damage

Series 2260B power supplies have programmable rise time (or slew rate) control to prevent potentially dangerous inrush currents from flowing into loads that have low resistance when power is initially supplied. Either voltage or current rise time can be controlled. With voltage slew rate control, voltage rise time can range from a slow, 0.1V/s to a high speed of 1600V/s for the 800V supplies. When operating under constant current control, output current rise time can be programmed from a low slew rate of 0.001A/s to a maximum value of 216A/s for the Model 2260B-30-108. Programming a current rise time puts the Series 2260B power supplies in a constant current control priority mode in which the current slew rate limits the rate at which the voltage rises across the device under test (DUT). In addition to controlling rise time, fall time can also be programmed; fall time values can be different from rise time values. Delivery of power to a load can be precisely controlled to prevent overshoot spikes and excessive amounts of inrush current, eliminating damage to components, modules, or devices and generating more precise characteristic I-V curves for components such as LEDs.

Precisely control voltage rise time with the variable slew rate control.
Programmable DC Power Supplies

Emulate the Response of a Battery

Test a circuit or device under the most realistic conditions by applying a test source with the output resistance that is equivalent to the output resistance of the actual source that will be used to power the circuit or device. For example, a battery has a varying internal resistance, and a device powered by a battery will have a voltage applied to the device that is reduced by the voltage drop across the battery’s internal resistance. Versions of the Series 2260B power supplies can have an internal resistance up to 555Ω to simulate a wide range of battery chemistries and load conditions.

10V @ 4Ω load
Internal Resistance = 0Ω
I = 2.5A
Vload = 10V – (2.5A*0Ω) = 10V

Internal Resistance = 0.9Ω
I=10V/(4Ω + 0.9Ω) = 2.04A
Vload = 10V – (2.04A*0.9Ω) = 8.16V

Internal Resistance = 1.8Ω
I = 10V/(4Ω + 1.8Ω) = 1.72A
Vload = 10V – (1.72A*1.8Ω) = 6.90V

Internal Resistance = 2.7Ω
I = 10V/(4Ω + 2.7Ω) = 1.49A
Vload = 10V – (1.49A*2.7Ω) = 5.98V

Use the programmable internal resistance to simulate a battery’s output. In this example, a Model 2260B-80-13 power supply is simulating a 10V battery whose internal resistance is 0Ω, 0.9Ω, 1.8Ω, and 2.7Ω. The resulting voltage at the output terminals drops from 10V to 5.98V due to the voltage drop across the internal resistance of the battery.

Flexible and Fast for Automated Test Systems

With their USB, LAN, or optional GPIB interfaces, Series 2260B power supplies will work in any automated system. In addition, these power supplies have an analog control capability that can control outputs via an external voltage and resistance. Furthermore, Series 2260B power supplies feature fast discharge capability to quickly dissipate the voltage on the output. These power supplies also have a fast, 1ms transient recovery time to load changes. This combination of fast discharge time and fast transient response minimizes critical test time in automated test systems.
Series 2260B Programmable DC Power Supplies

Create Custom Voltage Source Waveforms
An internal test sequence mode allows the Series 2260B supplies to output a set of voltage levels for varying time intervals at each level. The test sequence can be stored and used repeatedly to determine DUT performance at number of voltage levels. In addition, the analog input control parameter can be used to create voltage profiles that simulate how a battery responds to a fast changing load current requirement such as a large inrush current. Also, generate a combined DC output level with an AC signal superimposed on it to test how a circuit responds to noise on its DC power source. The analog input control capability, numerous types of DC supply signals can be generated to test circuits and devices under a wide range of circumstances.

A signal generator (top plot) controls the 2260B to create a complex DC supply waveform (bottom plot) that simulates both a voltage drop due to a large inrush current and noise on the DC supply line.

Series 2260B Programmable DC Power Supplies

DC POWER SUPPLIES

Series 2260B specifications

ANALOG CONTROL: External voltage or resistance control of output, voltage and current monitor outputs, turn-on, turn-off control, status monitoring, 26-Pin Connector (Rear Panel).

INTERFACE:
- USB: 1.1/2.0, Type A Host (Front Panel), Type B Control (Rear Panel).
- LAN: 100BASE-T (100Mb/s).
- GPIB: (with optional 2260B-GPIB-USB Adapter).

AC INPUT RANGE: 85VAC-265VAC, 50/60Hz, single phase

MAXIMUM POWER CONSUMPTION:
- 500VA (2260B-30-36, 2260B-80-13, 2260B-250-4, 2260B-800-1).
- 1000VA (2260B-30-72, 2260B-80-27, 2260B-250-9, 2260B-800-2).

POWER FACTOR: 0.97 to 0.99 (typical).

FAN: With thermal sensing control

ENVIRONMENT:
- Operating: 0° to 50°C, 20% to 85% RH.
- Storage: –25° to 70°C, 90% RH or less.

TEMPERATURE COEFFICIENT (after 30 minutes warm-up):
- Voltage: 100ppm/°C.
- Current: 200ppm/°C.

SAFETY:
- Complies with European Union Low Voltage Directive.

DIMENSIONS, WEIGHT:
- 360W Models: 71mm wide × 124mm high × 350mm deep (2.80 in. × 4.88 in. × 13.78 in.).
- Net Weight: Approx. 3kg (6.6 lb.).
- Shipping Weight: 4.3kg (9.5 lb.).
- 720W Models: 142.5mm wide × 124mm high × 350mm deep (5.61 in. × 4.88 in. × 13.78 in.).
- Net Weight: Approx. 5kg (11 lb.).
- Shipping Weight: 6.8kg (15 lb.).
- 1080W Models: 214mm wide × 124mm high × 350mm deep (8.43 in. × 4.88 in. × 13.78 in.).
- Net Weight: Approx. 7.5kg (16.5 lb.).
- Shipping Weight: 9.6kg (21 lb.).

WARRANTY: 3 years.

GENERAL

ANALOG VOLTAGE CONTROL:
- Voltage Setting Accuracy: ±0.5% of rated output voltage.
- Current Setting Accuracy: ±1% of rated output current.

ANALOG RESISTANCE CONTROL:
- Voltage Setting Accuracy: ±1.5% of rated output voltage.
- Current Setting Accuracy: ±1.5% of rated output current.

REGULATION (CV):
- Load: 0.05% of setting + 5mV.

REGULATION (CC):
- Load: 0.1% of setting + 5mA.

VOLTAGE SLEW RATE RANGE: Rising and Falling:
- 0.0080s to 0.8330s (2260B-30-36).
- 0.0080s to 1.9750s (2260B-80-40).
- 0.0080s to 5.9550s (2260B-800-3).
- 0.0080s to 27.7780s (2260B-800-2).
- 0.0080s to 185.400s (2260B-800-4).

CURRENT SLEW RATE RANGE: Rising and Falling:
- 0.01 A/s to 72.00 A/s (2260B-30-36).
- 0.1 A/s to 144.0 A/s (2260B-30-72).
- 0.1 A/s to 216.0 A/s (2260B-30-108).
- 0.01 A/s to 27.00 A/s (2260B-80-13).
- 0.01 A/s to 54.00 A/s (2260B-80-27).
- 0.01 A/s to 81.00 A/s (2260B-80-40).
- 0.01 A/s to 9.000 A/s (2260B-250-4).
- 0.01 A/s to 18.00 A/s (2260B-250-9).
- 0.01 A/s to 36.00 A/s (2260B-250-13).
- 0.001 A/s to 2.880 A/s (2260B-800-1).
- 0.001 A/s to 5.760 A/s (2260B-800-2).
- 0.001 A/s to 8.640 A/s (2260B-800-4).

MAXIMUM VOLTAGE DROP IN EACH LOAD WIRE WHEN USING REMOTE SENSE:
- 30V and 80V Models: 0.009V.
- 250V and 800V Models: 0.018V.

OUTPUT DELAY TIME RANGE:
- On Delay and Off Delay: 0s to 99.99s.

INTERNAL RESISTANCE RANGE:
- 0.0000Ω to 0.0008Ω (2260B-30-36).
- 0.0000Ω to 0.0004Ω (2260B-30-72).
- 0.0000Ω to 0.0002Ω (2260B-80-13).
- 0.0000Ω to 0.0001Ω (2260B-80-27).
- 0.0000Ω to 0.0000Ω (2260B-250-4).
- 0.0000Ω to 0.0000Ω (2260B-250-9).
- 0.0000Ω to 0.0000Ω (2260B-250-13).
- 0.0000Ω to 0.0000Ω (2260B-800-1).
- 0.0000Ω to 0.0000Ω (2260B-800-2).
- 0.0000Ω to 0.0000Ω (2260B-800-4).

SERIES AND PARALLEL CAPABILITY:
- Parallel Operation: Up to 3 units including the master unit.
- Series Operation: Up to 2 units including the master unit (30V and 80V models only).

PROTECTION FUNCTIONS:
- OVP: 10% to 100% of rated output voltage range.
- OCP: ±10% to 110% of rated output current range.
- OTP: Activated by elevated internal temperatures.

ISOLATION VOLTAGE: 500VDC, output to chassis.

ANALOG VOLTAGE CONTROL:
- Voltage Setting Accuracy: ±0.5% of rated output voltage.
- Current Setting Accuracy: ±1% of rated output current.

ANALOG RESISTANCE CONTROL:
- Voltage Setting Accuracy: ±1.5% of rated output voltage.
- Current Setting Accuracy: ±1.5% of rated output current.
Series 2260B Accessories

Model 2260-001: Accessory Kit: Analog control mating connector, pins, cover, and ground wire.

Model 2260-002: Simple IDC tool.

Model 2260-003: Contact removal tool.

Model 2260-004: Accessory Kit (30V and 80V models): Air filter, analog connector cover, analog control lock lever, M8-size output terminal bolts, washers and screws, and M4-size output terminal screws with washers.

Model 2260-005: Cable, 0.5m (1.6 ft.), to connect two series 2260B power supplies in series.

Model 2260-006: Cable, 0.5m (1.6 ft.), to connect two series 2260B power supplies in parallel.

Model 2260-007: Cable, 0.5m (1.6 ft.), to connect three series 2260B power supplies in parallel.

Model 2260-008: Test lead set with lugs, 10AWG, 1.22m (48 in), red/blue wire pair with #10 terminal lugs on each end.

Model 2260-009: Test Lead Set for 250V and 800V models, two sets of red and black wires, 20AWG, 1.22m (48 in), stripped wires on one end and lugs on the other end.

Model 2260-010: Basic Accessories Kit (250V and 800V models): Air filter, analog protection cover, analog control lock lever, output terminal cover, output terminal connector, strain relief.

Model 2260-B-EXTERM: Extended terminal; Test Leads, 0.7m (28 in), and terminal box to bring outputs to the front of the instrument or another location. Magnetic base attaches to side of instrument.
**Series 2260B**

Programmable DC Power Supplies

---

Model 2260B-EXTERM-HV: Extended terminal for 250V and 800V models; test leads and terminal box to bring outputs to the front of the instrument or another location. Magnetic base attached to side of instrument.

Model 2260B-GPIB-USB Adapter: Provides a GPIB interface for the Series 2260B power supplies.

Model 2260B-RMK-EIA: Rack mount kit (EIA racks).

Model 2260B-RMK-JIS: Rack mount kit (JIS racks).
