

Fax Connection Test Agent

Active Service Assurance

Overview

Tektronix' Active Assurance Fax Connection Test Agent allows you to analyze call connection performance based on ITU fax QoS standards over TDM, VoIP, VoCable, and wireless networks.

By measuring a complete set of connection and transmission parameters, the agent allows you to evaluate the probability of network problems such as congestion, latency and line noise.

Fax Connection tests generate fully automated active test calls that connect to far-end fax machines, collect fax transmission parameters, and hang up once the fax handshaking protocol is complete. This avoids printing fax pages at far-end destinations for service reliability testing while minimizing test-call billing duration. This minimizes test-call billing duration and avoids printing fax pages at the receiving machine.

Key Features / Benefits

- ▶ Identify IP, PSTN and wireless network congestion using fax transmission rate statistics
- ▶ Measure standard call connectivity metrics such as call completion ratio, post dial delay and ASR recorded with call disposition codes for service troubleshooting.
- ▶ Validate fax connectivity performance over VoIP, PSTN, wireless and hybrid networks
- ▶ Quick-disconnect before transmission minimizes long-distance billing charges.

Transmission Test Options:

- ▶ ITU 3 page test fax
- ▶ ITU 1 page test fax
- ▶ 1 page custom fax
