Re: Letter of volatility / Declassification document

To Whom It May Concern:

The attached document, “Series 2260B Programmable Power Supply, Declassification and Security Instructions” contains the information required by NISPOM, DoD 5220.22-M, chapter 8 and ISFO Process Manual for Certification and Accreditation of Classified Systems under NISPOM.

This is the same information required in a “Letter of Volatility” and the document should be considered as such.

If you have any further questions, please feel free to contact my office at any time.
