The pull-up voltage can either connect to the internally supplied 5V or an externally supplied voltage of up to 30V via onboard jumper. An internal 5V supply connection is separately available to run external logic circuits.

Digital Input logic low voltage: 0.8V max

Digital Output specifications:
Each output has an internal fly-back diode for driving inductive loads. Each output is protected against continuous short circuits and over temperature. An internal 5V supply connection is separately available to run external logic circuits.

Digital Output logic high voltage: 2.4V minimum @ Iout = 10mA. sourcing only.
Digital Output logic low voltage: 0.5V maximum @ Iout = -300mA sinking only.

Maximum output sink current: 300mA per output, 3.0 A total per card.

Logic: Positive True.

System Output Minimum Write speed\(^3\): 1000 readings / second.

Maximum externally supplied voltage to any digital I/O line: Pull-up voltage (5V internal or up to 30V external)

Alarm: Trigger generation is supported for a maskable pattern match or state change on any of channels 1 through 5.

Protection: Optional disconnect (set to inputs) during output fault conditions.

Internal 5V logic supply: The internal logic supply is designed for powering external logic circuits of up to 50mA maximum. The logic supply is internally protected with a self-resetting fuse. Fuse reset time < 1 hour.
