Tektronix and "Design for Environment"

Tektronix has a strong commitment to meet its environmental regulatory obligations. Our key objective is to ensure that our high standards of product quality, reliability and safety are maintained as we strive to reduce the environmental footprint of our products and processes.

To achieve this objective, Tektronix has actively engaged in a corporate wide initiative and with industry consortia to identify and implement the appropriate qualification criteria and acceptable alternative materials, as well as testing and reporting standards and due diligence processes, needed to meet our goals. These efforts are enabling us to transition our product designs over time to meet evolving regulatory obligations.

In addition to our work on phasing out restricted chemicals we have implemented recycling capability and met minimum efficiency performance specifications wherever local law requires.

Waste Electrical and Electronic Equipment (WEEE) - Product Recycling

European Union WEEE

In support of our environmental goals, Tektronix launched a formal product Take-Back and Recycle Program for Europe in 2005 that complies with the European Union Directive 2002/96/EC on waste electrical and electronic equipment ("WEEE Directive"). We are working to ensure that new requirements evolving during the implementation of the WEEE Recast, Directive 2012/19/EU, are also met.

The program provides self-service instructions for product take-back and recycling. Equipment that is returned through this program is handled using processes and partners that comply with the WEEE Directive requirements. Please visit our website at http://www.tek.com/productrecycling for more information or to submit a recycling request.

Restrictions on Hazardous Substances (RoHS) Compliance

European Union RoHS

Tektronix products are classified as Category 9 industrial monitoring and control instruments as defined in Annex I and Article 3(24) of the RoHS Recast Directive 2011/65/EU (RoHS 2). We have transitioned to RoHS 2 compliant components and assemblies for the majority of our legacy products and new products are engineered to comply with this directive. Our manufacturing processes, and those of our partner contract manufacturers, have been transitioned to lead-free soldering using components that can handle the higher processing temperature requirements. With these changes, we have verified that product performance specifications and long-term reliability expectations remain

unchanged. Directive (EU) 2015/863 (RoHS 2 Amendment) added 4 phthalates onto the list of restricted substances, but we are not required to comply until July 22, 2021. We are actively transitioning our products and continuing to work with our global supply chain partners to meet these upcoming requirements by the mandatory deadline.

For more information, please visit our website at https://www.tek.com/service/restrictions-of-hazardous-substances.

China RoHS

Tektronix products manufactured from March 1, 2007 comply with the requirements for product marking, disclosure of the content of certain hazardous substances, and packaging marking, which are associated with Phase 1 of the People's Republic of China legislation "Management Methods for Control of Pollution Caused by Electronic Information Products." This legislation is otherwise known as "China RoHS." We are working to ensure that new changes to disclosure statements under China RoHS 2 are also met.

Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) Compliance

In order to comply with the European Union REACH Regulation No 1907/2006, Tektronix has engaged in an ongoing effort to review our supply chain to ensure our products comply with applicable restrictions and identify SVHC usage above the 0.1% threshold by weight per article (as defined by Court of Justice of the European Union Case C-106/14). Our products are classified as articles which are not intended to release substances under normal or foreseeable conditions of use. As such, we are not directly required to register the materials used in their manufacture.

Tektronix has a duty to communicate to our customers the presence of SVHCs greater than 0.1% by weight of articles. For a list of SVHC that may be present in our products, please download our latest REACH statement at https://www.tek.com/service/REACH.

If you have any questions regarding the Tektronix Environmental program, including the use of restricted materials in our products, please contact the Product Compliance Manager at
+1 (503) 627-2534 or e-mail environmental-compliance@tek.com.
