Probe Buddy™

The Probe Buddy is the hands-free approach to high performance probing. The Probe Buddy is a probe positioner that uses a weighted, flexible arm to ease your workload when using popular Tektronix low-profile active probes.

Your probe rests against opposing flat surfaces in the clamp on the Probe Buddy. The weighted base holds the flexible arm in place.

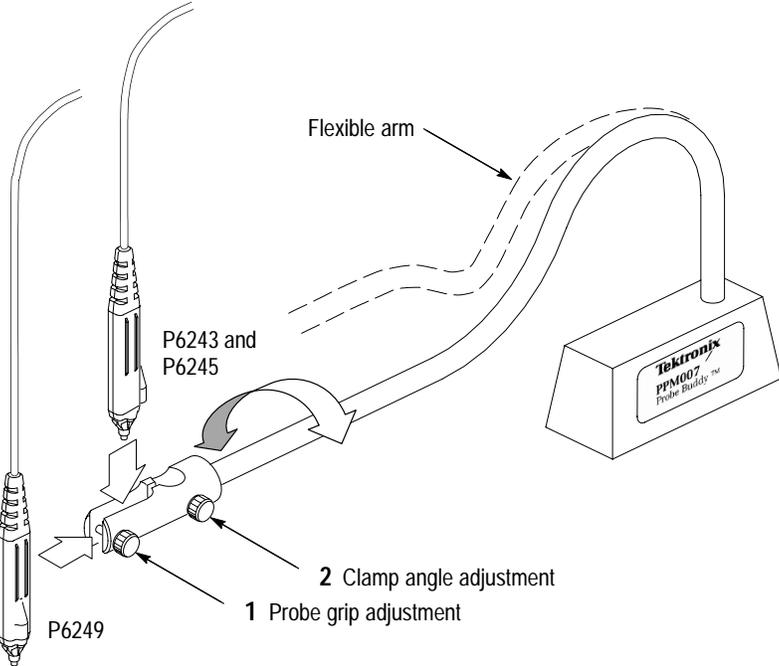

To use the Probe Buddy, refer to the illustration and do the following:

1. Loosen the probe grip thumbscrew (1) on the Probe Buddy clamp.

***NOTE.** Some probe models require the probe grip thumbscrew to be removed, so that the probe can slide into the clamp from the end.*

2. Slide the probe into the flat area of the clamp.
3. Replace and/or gently tighten the thumbscrew.
4. Place the Probe Buddy base on a flat surface near the circuit to be probed.
5. Bend the Probe Buddy arm to allow probe contact with the circuit.
6. If necessary, adjust the probe angle by loosening the clamp angle thumbscrew (2) and pivoting the clamp.
7. Tighten the thumbscrew and verify the probe is making contact with the circuit.
