Latest Oscilloscope Application and Version Releases Read This First

This document contains information on how to get the latest versions of your favorite Tektronix applications.

The latest version of an optional application that you ordered with your instrument may not be installed on the instrument or may not be available on the enclosed backup media. This download location is a fast and easy way to get them.

To download the latest version of add-on applications for your Tektronix instrument, go to the home page of the Tektronix Web site (www.tektronix.com), and locate the Downloads section on that page. Enter the application name in the Enter Model Number text box, and select Software in the Select Download Type pull-down menu.

NOTE. The Release Notes file available on the Web page may contain more recent information than the readme.txt file contained within the downloadable executable file.

To define the search criteria, use the title of the application in the ENTER MODEL NUMBER text box. For example, use the keyword DPOJET to search for and download the latest version of DPOJET.

If you purchased the application along with your instrument, your Tektronix License Key will enable you to use the application.

If you are upgrading, follow the instructions on How to Install your new Tektronix License Key in the Readme.txt to enable the application. A ten-time free trial is available for applications on supported oscilloscopes without a Tektronix License Key.

For questions about this process, please call Tektronix Customer Service:
