Warranty

Tektronix warrants that this product will be free from defects in materials and workmanship for a period of one (1) year from the date of shipment. If any such product proves defective in materials or workmanship during this warranty period, Tektronix, at its option, either will repair the defective product without charge for parts and labor, or will provide a replacement in exchange for the defective product. Parts, modules and replacement products used by Tektronix for warranty work may be new or reconditioned to like new performance. All replaced parts, modules and products become the property of Tektronix.

In order to obtain service under this warranty, Customer must notify Tektronix of the defect before the expiration of the warranty period and make suitable arrangements for the performance of service. Customer shall be responsible for packaging and shipping the defective product to the service center designated by Tektronix, with shipping charges prepaid. Tektronix shall pay for the return of the product to Customer if the shipment is to a location within the country in which the Tektronix service center is located. Customer shall be responsible for paying all shipping charges, duties, taxes, and any other charges for products returned to any other locations.

This warranty shall not apply to any defect, failure or damage caused by improper use or improper or inadequate maintenance and care. Tektronix shall not be obligated to furnish service under this warranty a) to repair damage resulting from attempts by personnel other than Tektronix representatives to install, repair or service the product; b) to repair damage resulting from improper use or connection to incompatible equipment; c) to repair any damage or malfunction caused by the use of non-Tektronix supplies; or d) to service a product that has been modified or integrated with other products when the effect of such modification or integration increases the time or difficulty of servicing the product.

THIS WARRANTY IS GIVEN BY TEKTRONIX WITH RESPECT TO THE PRODUCT IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED. TEKTRONIX AND ITS VENDORS DISCLAIM ANY IMPLIED WARRANTIES, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF NON-INFRINGEMENT, SATISFACTORY QUALITY, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. TEKTRONIX' RESPONSIBILITY TO REPAIR OR REPLACE DEFECTIVE PRODUCTS IS THE SOLE AND EXCLUSIVE REMEDY PROVIDED TO THE CUSTOMER FOR BREACH OF THIS WARRANTY. TEKTRONIX AND ITS VENDORS WILL NOT BE LIABLE FOR ANY INDIRECT, SPECIAL, PUNITIVE, INCIDENTAL, OR CONSEQUENTIAL DAMAGES IRRESPECTIVE OF WHETHER TEKTRONIX OR THE VENDOR HAS ADVANCE NOTICE OF THE POSSIBILITY OF SUCH DAMAGES.

[W2 - 15AUG04]

Important safety information

This manual contains information and warnings that must be followed by the user for safe operation and to keep the product in a safe condition.

To safely perform service on this product, see the Service safety summary that follows the General safety summary.

General safety summary

Use the product only as specified. Review the following safety precautions to avoid injury and prevent damage to this product or any products connected to it. Carefully read all instructions. Retain these instructions for future reference.

This product shall be used in accordance with local and national codes.

For correct and safe operation of the product, it is essential that you follow generally accepted safety procedures in addition to the safety precautions specified in this manual.

The product is designed to be used by trained personnel only.

Only qualified personnel who are aware of the hazards involved should remove the cover for repair, maintenance, or adjustment.

Before use, always check the product with a known source to be sure it is operating correctly.

This product is not intended for detection of hazardous voltages.

Use personal protective equipment to prevent shock and arc blast injury where hazardous live conductors are exposed.

While using this product, you may need to access other parts of a larger system. Read the safety sections of the other component manuals for warnings and cautions related to operating the system.

When incorporating this equipment into a system, the safety of that system is the responsibility of the assembler of the system.

To avoid fire or personal injury

Use proper power cord.

Use only the power cord specified for this product and certified for the country of use. Do not use the provided power cord for other products.

Ground the product.

This product is grounded through the grounding conductor of the power cord. To avoid electric shock, the grounding conductor must be connected to earth ground. Before making connections to the input or output terminals of the product, ensure that the product is properly grounded. Do not disable the power cord grounding connection.

Power disconnect.

The power cord disconnects the product from the power source. See instructions for the location. Do not position the equipment so that it is difficult to operate the power cord; it must remain accessible to the user at all times to allow for quick disconnection if needed.

Connect and disconnect properly...

Do not connect or disconnect probes or test leads while they are connected to a voltage source.

Use only insulated voltage probes, test leads, and adapters supplied with the product, or indicated by Tektronix to be suitable for the product.

Observe all terminal ratings.

To avoid fire or shock hazard, observe all rating and markings on the product. Consult the product manual for further ratings information before making connections to the product.

Do not exceed the Measurement Category (CAT) rating and voltage or current rating of the lowest rated individual component of a product, probe, or accessory. Use caution when using 1:1 test leads because the probe tip voltage is directly transmitted to the product.

Do not apply a potential to any terminal, including the common terminal, that exceeds the maximum rating of that terminal.

Do not float the common terminal above the rated voltage for that terminal.

The measuring terminals on this product are not rated for connection to mains or Category II, III, or IV circuits.

Do not operate without covers.

Do not operate this product with covers or panels removed, or with the case open. Hazardous voltage exposure is possible.

Avoid exposed circuitry.

Do not touch exposed connections and components when power is present.

Do not operate with suspected failures.

If you suspect that there is damage to this product, have it inspected by qualified service personnel.

Disable the product if it is damaged. Do not use the product if it is damaged or operates incorrectly. If in doubt about safety of the product, turn it off and disconnect the power cord. Clearly mark the product to prevent its further operation.

Before use, inspect voltage probes, test leads, and accessories for mechanical damage and replace when damaged. Do not use probes or test leads if they are damaged, if there is exposed metal, or if a wear indicator shows.

Examine the exterior of the product before you use it. Look for cracks or missing pieces.

Use only specified replacement parts.

Do not operate in wet/damp conditions.

Be aware that condensation may occur if a unit is moved from a cold to a warm environment.

Do not operate in an explosive atmosphere.

Keep product surfaces clean and dry.

Remove the input signals before you clean the product.

Provide proper ventilation.

Refer to the installation instructions in the manual for details on installing the product so it has proper ventilation.

Slots and openings are provided for ventilation and should never be covered or otherwise obstructed. Do not push objects into any of the openings.

Provide a safe working environment

Always place the product in a location convenient for viewing the display and indicators.

Avoid improper or prolonged use of keyboards, pointers, and button pads. Improper or prolonged keyboard or pointer use may result in serious injury.

Be sure your work area meets applicable ergonomic standards. Consult with an ergonomics professional to avoid stress injuries.

Use care when lifting and carrying the product. This product is provided with a handle or handles for lifting and carrying.

WARNING: The product is heavy. To reduce the risk of personal injury or damage to the device get help when lifting or carrying the product.

Use the secondary grip for repositioning/lifting on the bench top. To avoid injury by dropping the instrument, use the primary handle when you carry the instrument.

Use only the Tektronix rackmount hardware specified for this product.

Service safety summary

The Service safety summary section contains additional information required to safely perform service on the product. Only qualified personnel should perform service procedures. Read this Service safety summary and the General safety summary before performing any service procedures.

To avoid electric shock.

Do not touch exposed connections.

Do not service alone.

Do not perform internal service or adjustments of this product unless another person capable of rendering first aid and resuscitation is present.

Disconnect power.

To avoid electric shock, switch off the product power and disconnect the power cord from the mains power before removing any covers or panels, or opening the case for servicing.

Use care when servicing with power on.

Dangerous voltages or currents may exist in this product. Disconnect power, remove battery (if applicable), and disconnect test leads before removing protective panels, soldering, or replacing components.

Verify safety after repair.

Always recheck ground continuity and mains dielectric strength after performing a repair.

Terms in this manual

These terms may appear in this manual:

WARNING: Warning statements identify conditions or practices that could result in injury or loss of life.

CAUTION: Caution statements identify conditions or practices that could result in damage to this product or other property.

Terms on the product

These terms may appear on the product:

- DANGER indicates an injury hazard immediately accessible as you read the marking.
- WARNING indicates an injury hazard not immediately accessible as you read the marking.
- CAUTION indicates a hazard to property including the product.

Symbols on the product

When this symbol is marked on the product, be sure to consult the manual to find out the nature of the potential hazards and any actions which have to be taken to avoid them. (This symbol may also be used to refer the user to ratings in the manual.)

The following symbols(s) may appear on the product.

Chassis Ground

Compliance information

This section lists the EMC (electromagnetic compliance), safety, and environmental standards with which the instrument complies.

EMC compliance

EC Declaration of Conformity – EMC

Meets intent of Directive 2004/108/EC for Electromagnetic Compatibility. Compliance was demonstrated to the following specifications as listed in the Official Journal of the European Communities:

EN 61326-1:2006, EN 61326-2-1:2006.

EMC requirements for electrical equipment for measurement, control, and

laboratory use.1

- CISPR 11:2003. Radiated and conducted emissions, Group 1, Class A
- IEC 61000-4-2:2001. Electrostatic discharge immunity
- IEC 61000-4-3:2002. RF electromagnetic field immunity²
- IEC 61000-4-4:2004. Electrical fast transient/burst immunity
- IEC 61000-4-5:2001. Power line surge immunity
- IEC 61000-4-6:2003. Conducted RF immunity²
- IEC 61000-4-11:2004. Voltage dips and interruptions immunity

EN 61000-3-2:2006.

AC power line harmonic emissions

EN 61000-3-3:1995.

Voltage changes, fluctuations, and flicker

European contact.

Tektronix UK, Ltd.

Western Peninsula

Western Road

Bracknell, RG12 1RF

United Kingdom

Australia / New Zealand Declaration of Conformity – EMC

Complies with the EMC provision of the Radiocommunications Act per the following standard, in accordance with ACMA:

CISPR 11:2003. Radiated and Conducted Emissions, Group 1, Class A, in accordance with EN 61326-1:2006 and EN 61326-2-1:2006.

¹ This product is intended for use in nonresidential areas only. Use in residential areas may cause electromagnetic interference. Emissions which exceed the levels required by this standard may occur when this equipment is connected to a test object. If interconnect cables are used, they must be low–EMI shielded cables such as the following Tektronix part numbers or their equivalents: 012-0991-01, 012-0991-02 or 012-0991-03 GPIB Cable; 012-1213-00 (or CA part number 0294-9) RS-232 Cable; 012-1214-00 Centronics Cable; or LCOM part number CTL3VGAMM-5 VGA Cable. Use an 012-0482-00 cable for the Ref Out connector.

The performance criterion for when the oscilloscope is subjected to the continuously present electromagnetic phenomenon: MSO70000DX and DPO70000DX: 10 mV/division to 1 V/division: ≤0.4 division waveform displacement or ≤0.8 division increase in peak–to–peak noise. MSO5000B and DPO5000B: ≤4.0 division waveform displacement or ≤8.0 division increase in peak–to–peak noise.

Australia / New Zealand contact.

Baker & McKenzie Level 27, AMP Centre 50 Bridge Street Sydney NSW 2000, Australia

Safety compliance

This section lists the safety standards with which the product complies and other safety compliance information.

EU declaration of conformity - low voltage

Compliance was demonstrated to the following specification as listed in the Official Journal of the European Union:

Low Voltage Directive 2014/35/EU.

- EN 61010-1. Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use Part 1: General Requirements
- EN 61010-2-030. Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use Part 2-030: Particular requirements for testing and measuring circuits

U.S. nationally recognized testing laboratory listing

- UL 61010-1. Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use Part 1: General Requirements
- UL 61010-2-030. Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use Part 2-030: Particular requirements for testing and measuring circuits

Canadian certification

- CAN/CSA-C22.2 No. 61010-1. Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use Part 1: General Requirements
- CAN/CSA-C22.2 No. 61010-2-030. Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use Part 2-030: Particular requirements for testing and measuring circuits

Additional compliances

- IEC 61010-1. Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use Part 1: General Requirements
- IEC 61010-2-030. Safety Requirements for Electrical Equipment for Measurement, Control, and Laboratory Use Part 2-030: Particular requirements for testing and measuring circuits

Equipment type

Test and measuring equipment.

Safety class

Class 1 – grounded product.

Pollution degree description

A measure of the contaminants that could occur in the environment around and within a product. Typically the internal environment inside a product is considered to be the same as the external. Products should be used only in the environment for which they are rated.

 Pollution Degree 1. No pollution or only dry, nonconductive pollution occurs. Products in this category are generally encapsulated, hermetically sealed, or located in clean rooms.

- Pollution Degree 2. Normally only dry, nonconductive pollution occurs. Occasionally a temporary conductivity that is caused by
 condensation must be expected. This location is a typical office/home environment. Temporary condensation occurs only when the
 product is out of service.
- Pollution Degree 3. Conductive pollution, or dry, nonconductive pollution that becomes conductive due to condensation. These are sheltered locations where neither temperature nor humidity is controlled. The area is protected from direct sunshine, rain, or direct wind
- Pollution Degree 4. Pollution that generates persistent conductivity through conductive dust, rain, or snow. Typical outdoor locations.

Pollution degree rating

Pollution degree 2 (as defined in IEC 61010-1). Rated for indoor, dry location use only.

IP rating

IP20 (as defined in IEC 60529).

Measurement and overvoltage category descriptions

Measurement terminals on this product may be rated for measuring mains voltages from one or more of the following categories (see specific ratings marked on the product and in the manual).

- · Measurement Category II. For measurements performed on circuits directly connected to the low-voltage installation.
- Measurement Category III. For measurements performed in the building installation.
- Measurement Category IV. For measurements performed at the source of low-voltage installation.

Note: Only mains power supply circuits have an overvoltage category rating. Only measurement circuits have a measurement category rating. Other circuits within the product do not have either rating.

Mains overvoltage category rating

Overvoltage category II (as defined in IEC 61010-1).

Environmental considerations

This section provides information about the environmental impact of the product.

Product end-of-life handling

Observe the following guidelines when recycling an instrument or component:

Equipment recycling

Production of this equipment required the extraction and use of natural resources. The equipment may contain substances that could be harmful to the environment or human health if improperly handled at the product's end of life. To avoid release of such substances into the environment and to reduce the use of natural resources, we encourage you to recycle this product in an appropriate system that will ensure that most of the materials are reused or recycled appropriately.

This symbol indicates that this product complies with the applicable European Union requirements according to Directives 2012/19/EU and 2006/66/EC on waste electrical and electronic equipment (WEEE) and batteries. For information about recycling options, check the Tektronix Web site (www.tek.com/productrecycling).

Mercury notification This product uses an LCD backlight lamp that contains mercury. Disposal may be regulated due to

environmental considerations. Please contact your local authorities or, within the United States, refer to the

E-cycling Central Web page (www.eiae.org) for disposal or recycling information.

Perchlorate materials This product contains one or more type CR lithium batteries. According to the state of California, CR

lithium batteries are classified as perchlorate materials and require special handling. See www.dtsc.ca.gov/

hazardouswaste/perchlorate for additional information.

Note: Mercury notification **does not apply** to MSO5000B and DPO5000B instruments. MSO5000B and DPO5000B instruments use an LED backlight that does not contain mercury.

Restriction of hazardous substances

This product is classified as an industrial monitoring and control instrument and is not required to comply with the substance restrictions of the recast RoHS Directive 2011/65/EU until July 22, 2017.

Preface

This manual describes the installation and operation of MSO/DPO7000DX Series and MSO/DPO5000B Series instruments. Basic operations and concepts are presented in this manual. For more detailed information see the online help on your instrument. The following instruments are supported by this manual:

- MSO70804DX and DPO70804DX
- MSO71254DX and DPO71254DX
- MSO71604DX and DPO71604DX
- MSO72004DX and DPO72004DX
- MSO73304DX and DPO73304DX
- MSO72504DX and DPO72504DX
- MSO72304DX and DPO72304DX
- MSO5204B and DPO5204B
- MSO5104B and DPO5104B
- MSO5054B and DPO5054B
- MSO5034B and DPO5034B

Key features

Tektronix oscilloscopes are high-performance solutions for verification, debugging, and characterization of sophisticated electronic designs. These oscilloscopes feature exceptional signal acquisition performance, operational simplicity, and open connectivity to the design environment. Classic analog-style controls, a large display with an optional touch-sensitive screen, and graphical menus provide intuitive control. Open access to the Windows operating system enables unprecedented customization and extensibility.

Key features include:

- · Bandwidth:
 - DPO77002SX 70 GHz bandwidth and 200 GS/s on 1 analog channel or 33 GHz bandwidth and 100 GS/s on 2 analog channels
 - DPO75902SX 59 GHz bandwidth and 200 GS/s on 1 analog channel or 33 GHz bandwidth and 100 GS/s on 2 analog channels
 - DPO75002SX 50 GHz bandwidth and 200 GS/s on 1 analog channel or 33 GHz bandwidth and 100 GS/s on 2 analog channels
 - DPO73304SX 33 GHz bandwidth and 100 GS/s on 2 analog channels or 33 GHz bandwidth and 50 GS/s on 4 analog channels
 - DPO72504SX 25 GHz bandwidth and 100 GS/s on 2 analog channels or 20 GHz bandwidth and 50 GS/s on 4 analog channels
 - DPO72304SX 23 GHz bandwidth and 100 GS/s on 2 analog channel or 23 GHz bandwidth and 50 GS/s on 4 analog channels
 - DPO72004SX 20 GHz bandwidth and 100 GS/s on 2 analog channels or 25 GHz bandwidth and 50 GS/s on 4 analog channels
 - DPO71604SX 16 GHz bandwidth and 100 GS/s on 2 analog channel or 16 GHz bandwidth and 50 GS/s on 4 analog channels
 - DPO71304SX 13 GHz bandwidth and 100 GS/s on 2 analog channel or 13 GHz bandwidth and 50 GS/s on 4 analog channels
 - MSO73304DX, MSO72504DX, MSO72304DX, MSO72004DX, MSO71604DX, MSO71254DX, and MSO70804DX: 33, 25, 23, 20, 16, 12.5, and 8 GHz models with up to 100 GS/s real-time sampling rate on 2 channels, and 50 GS/s on 4 channels
 - DPO73304DX, DPO72504DX, DPO72304DX, DPO72004DX, DPO71604DX, DPO71254DX, and DPO70804DX: 33, 25, 23, 20, 16, 12.5, and 8 GHz models with up to 100 GS/s real-time sampling rate on 2 channels, and 50 GS/s on 4 channels
 - DPO71254C, MSO71254C, DPO71604C, MSO71604C, DPO72004C, and MSO72004C: 12.5, 16, and 20 GHz models with up to 100 GS/s real-time sampling rate on 2 channels, and 50 GS/s on 4 channels
 - DPO70404C, MSO70404C, DPO70604C, MSO70604C, DPO70804C, and MSO70804C: 4, 6, and 8 GHz models with up to 25 GS/s real-time sampling rate on 4 channels
 - DPO7054C, DPO7104C, DPO7254C, and DPO7354C: 500 MHz, 1 GHz, 2.5 GHz, 3.5 GHz models with up to 20 GS/s real-time sampling rate on 2 channels

- DPO5034B, MSO5034B, DPO5054B, MSO5054B, DPO5104B, MSO5104B, DPO5204B, and MSO5204B: 350 MHz, 500 MHz, 1 GHz, and 2 GHz models with up to 10 GS/s real-time sampling rate on 2 channels
- Record length: up to 1,000,000,000 samples on 2 channels and 500,000,000 samples on 4 channels, depending on the model and
 options
- Fast acquisition up to >300,000 acquisitions per second, depending on the model of instrument
- Bandwidth enhancement controls available for some models (See Using DSP enhanced bandwidth on page 56)
- Up to 1% DC vertical gain accuracy
- Up to four input channels (each with 8-bit resolution)
- · Auxiliary trigger input and output
- · Sample, envelope, peak-detect, high-resolution, average, fast acquisition, and waveform database acquisition modes
- Full programmability, with an extensive command set and a message-based interface
- · Extensive suite of advanced triggers
- Powerful built-in measurement capability, including histograms, automatic measurements, eye pattern, and measurement statistics
- · Basic math as well as advanced equation editor and spectral analysis
- A large 12.1 inch (307.3 mm), 1024 x 768 resolution, XGA color display that supports color grading of waveform data to show sample density
- Customizable MyScope control window (See Creating a new MyScope control window on page 166)
- · An intuitive graphical user interface (GUI) with online help
- Internal disk storage
- Wide array of probing solutions, options, and upgrades
- · GPIB Controller available on some models
- Comprehensive suite of right-click menus
- Parallel bus decoding, triggering and analysis
- Serial bus decoding, triggering and analysis are optionally available

MSO7000DX Series Mixed Signal Oscilloscopes also offer:

- 16 digital channels plus 1 clock/qualifier channel
- High resolution timing as precise as 80 ps
- An analog view of any digital channel through the iCapture feature
- · Enhanced Logic Pattern and Logic State triggering includes digital channels
- Differential (P6780) and single-ended (P6717A) logic probes
- Easy connection to your device-under-test through the convenient design of the P6780 and the P6717 Logic probes
- iCapture allows analyzing the analog characteristics of the digital channels

MSO5000B Series instruments offer:

MagniVu 60.6 ps resolution

India (Option A11)	161-0349-00	161-0325-00	
Brazil (Option A12)	161-0356-00	161-0358-00	
No power cord or AC adapter (Option AS	9) —	-	

Operating Requirements

MSO70000DX and DPO70000DX

Maximum input voltage, 4 GHz to 20 GHz models:		
50 Ω	<1 V _{RMS} for <1 V/FS settings and < 5.5 VRMS for ≥1 V/FS settings	
Maximum input voltage, > 20 GHz models:		
50 Ω ≤1.2 V/FS settings		
	±1.5 V relative to the termination bias (30mA maximum).	
	±5 V absolute maximum input. ±5 V absolute maximum input.	
	10 V at 25 °C derated to 8.4 V at 45 °C (limited by attenuator).	
Maximum nondestructive input voltage to logic probes, MSO70000DX Series:	±15 V	

CAUTION:

For proper cooling, keep the bottom and sides of the instrument clear of obstructions.

MSO5000B and DPO5000B

1.	Place the instrument on a cart or bench. The instrument should rest on its bottom or rear feet. An optional rack mounting kit is available. Observe the following clearance requirements and dimensions:		
	Rear:	2 in (50.8 mm)	
	Left side:	2 in (50.8 mm)	
2.	Width:	17.3 inches (439 mm)	
3.	Height:	9.2 inches (233 mm) including feet	
		10.7 inches (272 mm) including vertical handle and feet	
4.	Before operating the instrument, verify the ambient temperature:	5 °C to +50 °C (+41 °F to +131 °F)	
5.	Verify the operating humidity:	High: 40 °C to 50 °C (104 °F to 122 °F), 10% to 60% relative humidity	
		Low: 0 °C to 40 °C (32 °F to 104 °F), 10% to 90% relative humidity	
6.	Verify the operating altitude:	3,000 m (9,843 feet)	
Table	continued		

7.	Maximum input voltage:	
	50 $Ω$ input impedance	5 V _{RMS} , with peaks ≤±20 V (DF ≤6.25%).
	1 MΩ input impedance	300 V _{RMS} , CAT II, with peaks ≤±425 V at the BNC.
		For <100 mV/div derate at 20 dB/decade above 100 kHz to 30 VRMS at 1 MHz, 10 dB/decade above 1 MHz.
		For ≥100 mV/div derate at 20 dB/decade above 3 MHz to 30 VRMS at 30 MHz, 10 dB/decade above 30 MHz.
	Maximum nondestructive input voltage to logic probes:	±42 V

CAUTION:

For proper cooling, keep the back and left side of the instrument clear of obstructions.

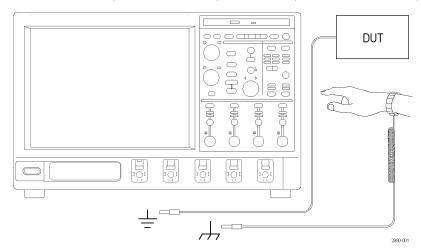

Preventing ESD

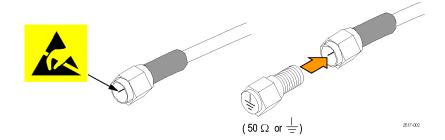

CAUTION: A direct electrostatic discharge can damage the instrument input. To learn how to avoid this damage, read the following information.

Electrostatic discharge (ESD) is a concern when handling any electronic equipment. The instrument is designed with robust ESD protection, however it is still possible that large discharges of static electricity directly into the signal input may damage the instrument. To avoid damage to the instrument, use the following techniques to prevent electrostatic discharge to the instrument.

1. Discharge the static voltage from your body by wearing a grounded antistatic wrist strap while connecting and disconnecting cables and TekConnect adapters. The instrument provides a front panel connection for this purpose.

2. A cable that is left unconnected on bench can develop a large static charge. Discharge the static voltage from all cables before connecting them to the instrument or device under testby momentarily grounding the center conductor of the cable, or by connecting a 50Ω termination to one end, before attaching the cable to the instrument.

Powering on the instrument

Power supply requirements

Source voltage and frequency	Power consumption
MSO70000DX and DPO70000DX Series:	≤1100 VA
100–240 V _{RMS} ±10%, 50–60 Hz	
or 115 V _{RMS} ±10%, 400 Hz. CAT II	
MSO5000B and DPO5000B Series:	275 Watts maximum
100–240 VRMS ±10% 50–60 Hz	
115 V 440 Hz	

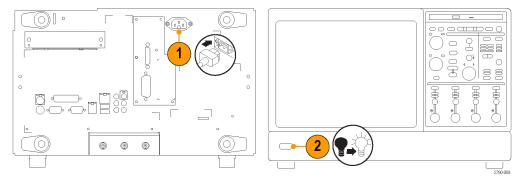

Figure 1: MSO70000DX and DPO70000DX Series

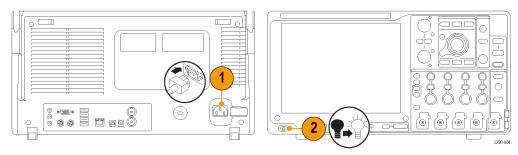

Figure 2: MSO5000B and DPO5000B Series

Powering off the instrument

Removing the power

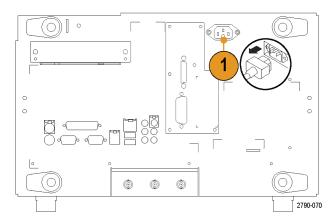

Figure 5: MSO70000DX and DPO70000DX Series

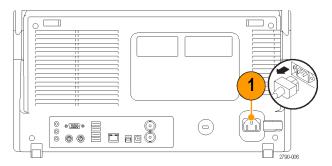

Figure 6: MSO5000B and DPO5000B Series

Securing the oscilloscope

1. Use a standard laptop computer-style securitylock to secure your oscilloscope to your location.

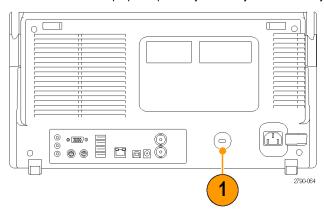

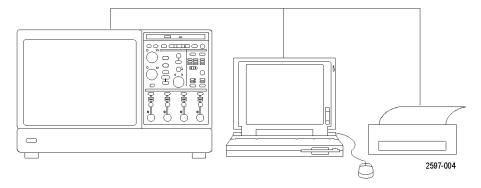

Figure 7: MSO5000B and DPO5000B Series

Connecting to a network

Connect your instrument to a network for printing, file sharing, internet access, and other functions. Consult with your network administrator and use the standard Windows utilities to configure the instrument for your network.

Use the Remote Desktop Connection of Windows to control and view the instrument remotely.

Adding a second monitor

You can operate the instrument while using Windows and installed applications on an external monitor. Follow the procedure below to set up a dual monitor configuration.

MSO70000DX and DPO70000DX Series

- 1. Turn power off.
- 2. Connect second monitor.
- 3. Connect keyboard.
- 4. Connect mouse.
- 5. Turn instrument power on.
- 6. Turn monitor power on.

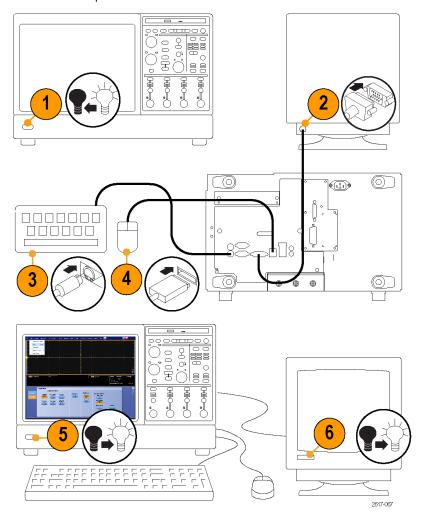

Figure 8: MSO70000DX and DPO70000DX Series

MSO5000B and DPO5000B models

- 1. Turn off power.
- 2. Connect second monitor.
- 3. Connect keyboard.
- 4. Connectmouse.
- 5. Turn on instrument power.
- 6. Turn on monitor power.

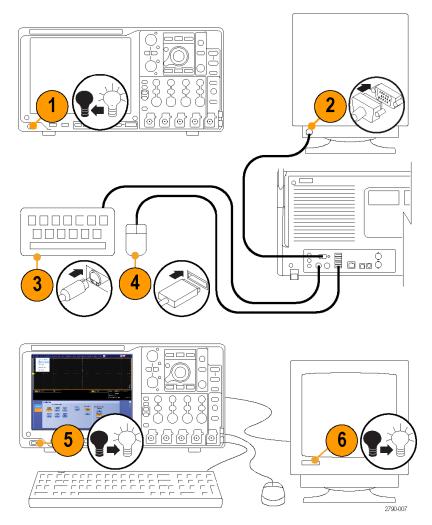

Figure 9: MSO5000B and DPO5000B models

Activating Microsoft Windows 10

The copy of Microsoft Windows 10 that ships with this product is shipped in Deferred Activation mode. Microsoft has a default activation method that requires a connection to the Internet. If you are not able to connect to the Internet, you can activate Windows 10 by phone or you can continue to operate in Deferred Activation mode.

First time activation

You can activate Windows 10 either of the following ways.

- 1. Connect to the Internet. Windows will automatically activate. You can also go to System Properties to connect and activate.
- 2. Call Microsoft and speak with a representative to activate Windows 10. Contact information and a unique activation code (installation ID) will appear in a pop up window.

Activation with removable drives

If the SSD is removed from one instrument and inserted into another instrument, then the activation process will need to run again on the second instrument. If the second instrument is not connected to the Internet, the activation will fail and an Activate Windows watermark will display on the screen. To activate Windows and remove the watermark, you must connect to the Internet or call Microsoft.

Operating system restore

Note: This part of the procedure is only applicable for MSO5000B and DPO5000B models.

If your instrument shipped with an operating system restore DVD and you need to restore the operating system, you can use the procedure that came with the DVD.

The instrument contains an operating system restore file on a separate partition of the hard drive.

The preferred method to restore the instrument operating system is to use the hard disk restore file.

Note: Using the restore process reformats the hard drive and reinstalls the operating system. All saved data is lost. If possible, save important files to external media before performing a system restore.

1. Restart the instrument. During the boot-up process you will see the following message at the top of the screen: Starting Acronis Loader... press F5 for Acronis Startup Recovery Manager.

Note: To successfully complete the system restore, you must use the Windows version of the Acronis software. Using a generic MAC keyboard starts the DOS version of the Acronis software. Do not use a MAC keyboard.

- 2. Repeatedly press the F5 key until the Acronis True Image Tool opens. There is a 15-second time period from when the message appears until the instrument proceeds with the normal instrument startup. If the instrument does not open the Acronis application, power off the instrument, then power on the instrument and try again.
- 3. Click Restore.
- **4.** In the Confirmation dialog box, click Yes to restore the instrument operating system, or No to exit the restore process. The restore process takes approximately 30 minutes; the actual time depends on the instrument configuration.

Restoring a Windows SSD

Note: This part of the procedure is only applicable for MSO70000DX and DPO70000DX models.

When you need to recover your Windows system image backup use the following process to restore your Windows drive

About this task

The goal of this procedure is to use the AOMEI OneKey Recovery to restore the latest version of your Windows drive.

Before you begin

- A keyboard is attached to the instrument.
- No USB drives are plugged into the instrument

Procedure

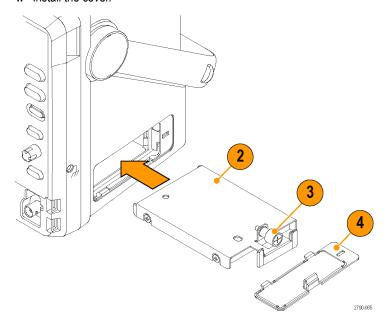

- 1. Power off the instrument completely.
- 2. Power the instrument on.
- 3. From the Choose an operating system menu, select the Enter into AOMEI OneKey Recovery option. This menu is only displayed for 5 seconds.
- 4. Select the Yes button when the Do you need to restore your system prompt appears.
- 5. Select the Start Restore button to confirm which drive partitions will be overwritten. AOMEI Restore begins.
- **6.** When the restore completes select the **Finish** button.
- 7. Select the X is the upper right corner to close the AOMEI application. The instrument powers off and automatically restarts.
- 8. Verify that the instrument restored successfully.

Installing the MSO5000B and DPO5000B hard drive

CAUTION: Inserting the hard drive assembly upside down could damage the instrument.

- 1. Verify that the instrument is off.
- 2. Insert the hard drive into the instrument with the drive assembly chassis facing up.
- 3. Secure the drive assembly using the thumb screw.
- 4. Install the cover.

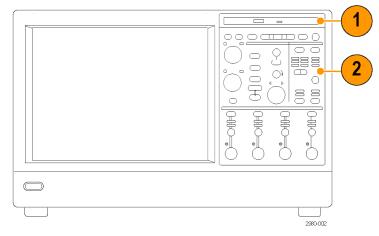

Getting acquainted with your instrument

Front panel

MSO70000DX and DPO70000DX

- · DVD/CD-RW drive
- · Front panel controls

- USB port
- Ground terminal
- Recovered data output (not available on DPO7104C and DPO7054C)
- Recovered clock output (not available on DPO7104C and DPO7054C)
- · Probe compensation output
- · Probe calibration output
- Channel 1–4 input
- Auxiliary Trigger input
- · Fast Edge output
- DC Probe Cal output
- · Logic probe input
- Ground terminal through a 1 $M\Omega$ resistor

- 13. Security lock input
- 14. AC Power input
- 15. Removable hard disk drive cover
- 16. Ground connection

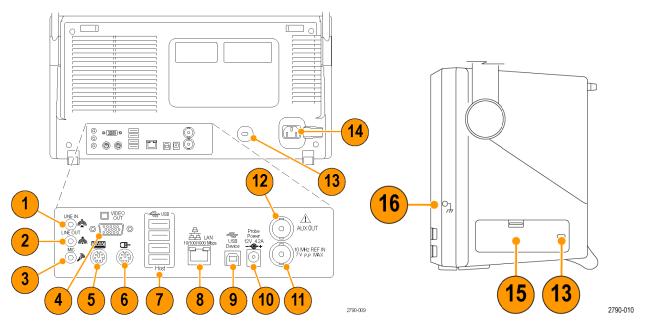

Figure 14: MSO5000B and DPO5000B Series

To use PS-2 devices, they must be plugged in before you power on the instrument. PS-2 devices must not be hot swapped.

Interface and display

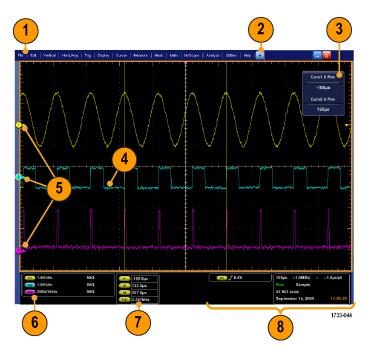

The menu bar mode provides access to commands that control all of the instrument features and functions. The toolbar mode provides access to the most common features.

- 1. Menu Bar: Access to data I/O, printing, online help, and instrument functions
- 2. Buttons/Menu: Click to toggle between toolbar and menu bar modes and to customize your toolbar
- 3. Multipurpose Knob Readouts: Adjust and display parameters controlled by the multipurpose knobs
- 4. Display: Live, reference, math, digital, and bus waveforms display here, with cursors
- 5. **Waveform Handle:** Click and drag to change vertical position of a waveformor bus. Click the handle and change the position and scale using the multipurpose knobs.
- 6. Controls Status: Quick reference to vertical selections, scale, offset, and parameters
- 7. **Readouts:** Display cursor and measurement readouts in this area. Measurements are selectable from the menu bar or toolbar. If a control window is displayed, some combinations of readouts move to the graticule area.

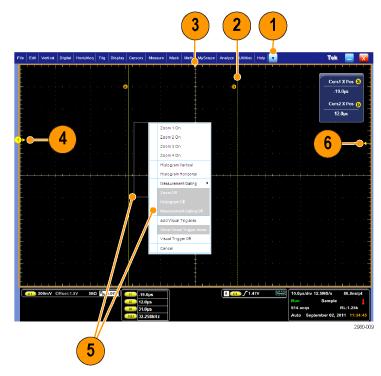

WARNING: If there is vertical clipping, there may be a dangerous voltage on the probe tip, but the readout will indicate a low voltage. A symbol ______ appears in the measurement readout if a vertical clipping condition exists. Automatic amplitude-related measurements where the signal is vertically clipped produce inaccurate results. Clipping also causes inaccurate amplitude values in waveforms that are stored or exported for use in other programs. If a math waveform is clipped, it will not affect amplitude measurements on that math waveform.

8. Status: Display of acquisition status, mode, and number of acquisitions; trigger status; date; time; and quick reference to record length and horizontal parameters

- 1. Buttons/Menu: Click to toggle between toolbar and menu bar modes and to customize the toolbar
- 2. Drag cursors to measure waveforms on screen
- **3.** Drag the position icons to reposition a waveform
- 4. Click the icon to assign the multipurpose knobs to waveform vertical position and scale
- **5.** Drag across the waveform area to create a box for zooming, enabling/disabling histograms, gating measurements, and adding and controlling visual trigger areas
- 6. Drag icon to change the trigger level

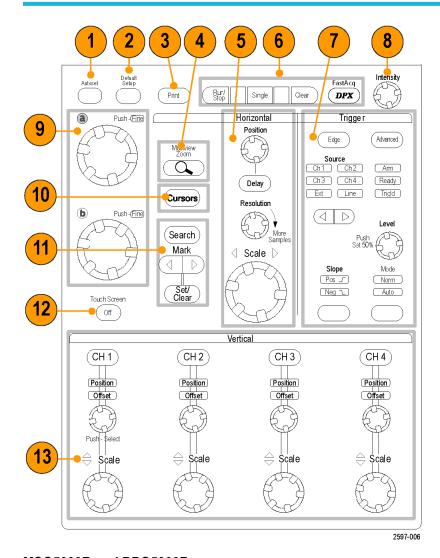

Control panel

MSO70000DX and DPO70000DX

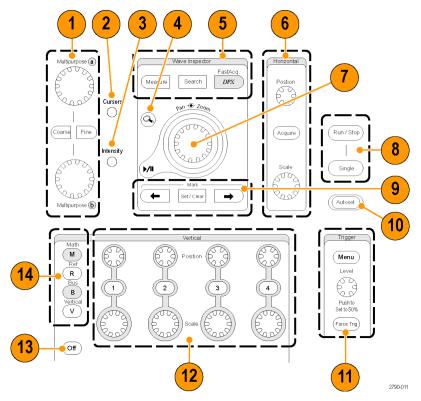

- Push to automatically set up the vertical, horizontal, and trigger controls based on selected channels.
- · Push to return settings to default values.
- Push to make a hard copy or save a screen capture.
- Push to turn on MultiView Zoom and add a magnified graticule to the display.
- · Horizontally scale, position, delay, and set record length (resolution) of all waveforms.
- Use to start and stop acquisition, start a single acquisition sequence, clear data, or start fast acquisitions.
- Use to set the trigger parameters. Push Advanced to display additional trigger functions. The Arm, Ready, and Trig'D lights show the
 acquisition status.
- Turn to adjust waveform intensity.
- Turn to adjust parameters selected from the screen interface. Push to toggle between normal and fine adjustment.
- Push to turn cursors on or off.
- Use to search and mark waveforms.
- · Push to turn the touch screen on and off.
- Turn channel displays on and off. Vertically scale, position, or offset the waveform. Toggle between position and offset.

On MSO70000 Series instruments, turn on digital channels using the **Digital Setup menu**. (See *Setting up digital signal input* on page 61)

MSO5000B and DPO5000B

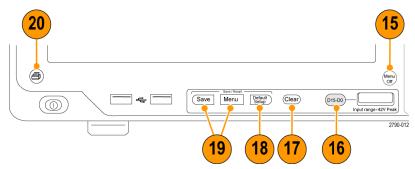

- Turn to adjust parameters selected from the screen interface. Push Fine to select fine adjustment, push Coarse to select coarse adjustment.
- · Push to turn cursors on or off.
- Push to adjust waveform intensity using a Multipurpose knob.
- Push to turn on MultiView Zoom and add a magnified graticule to the display.
- Push to perform automated measurements, search through an acquisition for user-defined events/criteria, or start or stop fast acquisitions.
- Horizontally scale, position, and set the horizontal and acquisition parameters of all waveforms.
- Turn the inner zoom knob to control the zoom factor. Turn the outer pan knob to scroll the zoom window through the acquired waveform. Push the play-pause button to start or stop the automatic panning of a waveform. Control the speed and direction with the pan knob.
- Use to start and stop acquisition or start a single acquisition sequence.
- Use to search and mark waveforms, to establish or delete a waveform mark, or to jump to the previous or next waveform mark.
- Push to automatically set up the vertical, horizontal, and trigger controls based on selected channels.
- Use to set the trigger parameters. Push Menu to display additional trigger functions.

· Turn channel displays on and off. Vertically scale or position the waveform.

On MSO5000B Series instruments, turn on digital channels by pushing the D15–D0 button or using the **Digital Setup** menu.(See Setting up digital signal input on page 61)

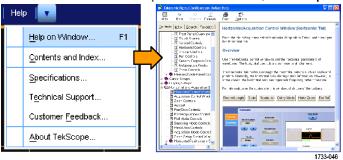

- · Push to turn the touch screen on and off.
- Push to display the math, reference, bus, or vertical setup menus.
- · Push to turn off a displayed menu.
- Push to access the digital setup menu (MSO5000B Series only).
- · Push to clear data.
- Push to return settings to default values.
- · Push to save and recall setups, waveforms, and screen images.
- Push to make a hard copy or save a screen capture.

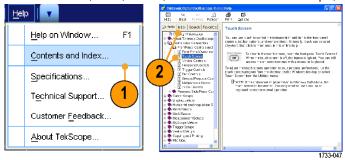

Accessing online help

In-depth informationis available in the online help on all the features of your instrument.

To access context-sensitive help on the active window, select **Help > Help on Window** or press **F1**.

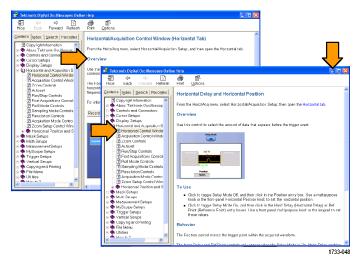

- 1. To access any topic in the help system, select **Help > Contents and Index**.
- 2. Use the Contents, Index, Search, or Favorites tab to select the topic, and then click **Display**.

To navigate within the help system:

- Click a button in a help window to navigate between the Overview and specific topics.
- Click the Minimize button in the help window to move help out of the way so you can operate the instrument.
- Click Alt and Tab to see the last help topic again.

Accessing menus and control windows

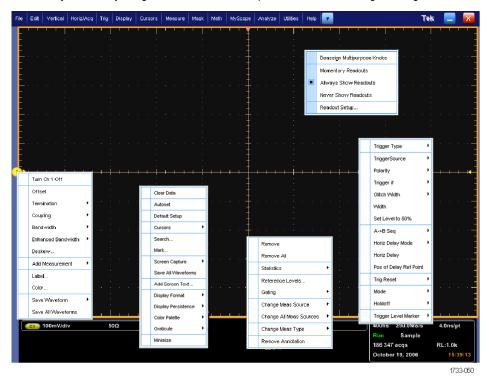

Access menus and control windows using the following techniques:

Click a menu, and then select a command.

1733-049

• For a shortcut menu, right-click anywhere in the graticule or on an object. The shortcut menu is context sensitive and varies with the area or object where you right-clicked. Some examples are shown in the figure at right.

• In the toolbar mode, click a button to quicklyaccess a setup control window. (See Interface and display on page 33)

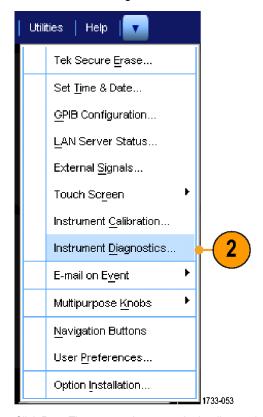

Inspect your instrument

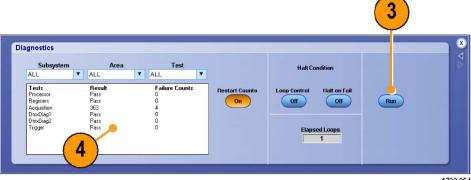

Use the following procedures to verify the functionality of your instrument.

Verify internal diagnostics pass

- 1. Power on the instrument.
- 2. Select Instrument Diagnostics.

- 3. Click Run. The test results appear in the diagnostics control window.
- Verify that all the tests pass. If diagnostic failures occur, contact your local Tektronix service personnel.

1733-054

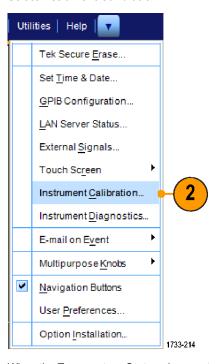

Acquisition

This section contains concepts of and procedures for using the acquisition system.

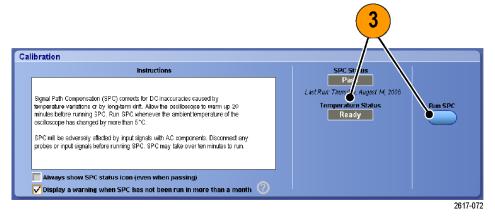

Signal path compensation

Use this procedure if the temperature has changed more than 5 °C (9 °F) since the last signal path compensation (SPC). Perform the signal path compensation regularly to ensure that your measurements have the highest level of accuracy. Tektronix considers it a best practice to run SPC when using the instrument to measure signals with higher sensitivity(10 mV/div and lower) settings regardless of temperature shift or time since it was last run. Failure to do so may result in the instrument not meeting warranted performance levels.

- 1. Pre requisites: instrument powered on for 20 minutes, and all input signals removed.
- 2. Select Instrument Calibration.

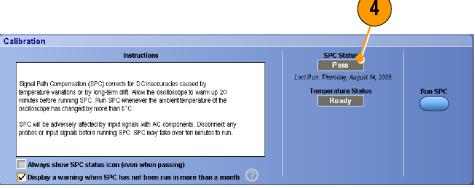

3. When the Temperature Status changes to Ready, click Run SPC to start the calibration. Calibration may take 10 to 15 minutes.

4. If the instrument does not pass, recalibrate the instrument, or have the instrument serviced by qualified service personnel.

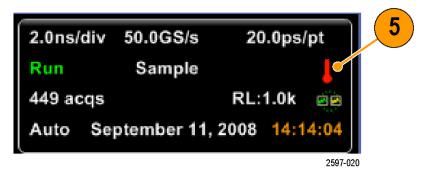

Note: To always show the SPC status icon or display a warning when SPC has not been run in more than a month, click the corresponding check box.

1733-056

5. If the SPC needed icon is red, perform a signal path compensation.

Setting up analog signal input

Use front-panel buttons to set up your instrument to acquire the signal.

1. Connect the probe to the input signal source.

CAUTION: To prevent damage to the instrument, always wear an antistatic wrist strap when making connections to the instrument and observe the maximum input voltage ratings for input connectors.

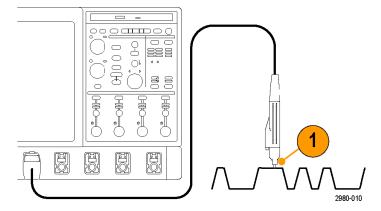

Figure 15: MSO70000DX and DPO70000DX

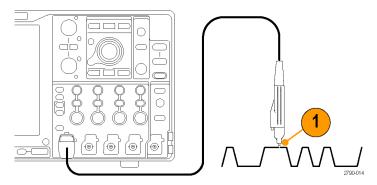

Figure 16: MSO5000B and DPO5000B Series

2. Select the input channel by pushing the front-panel buttons to toggle the channels on and off.

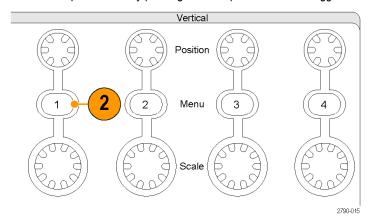

Figure 17: MSO5000B and DPO5000B Series

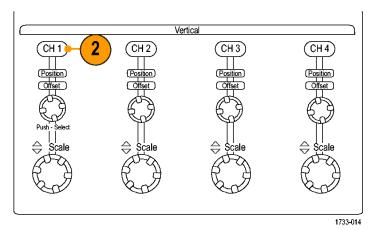

Figure 18: MSO70000DX and DPO70000DX Series

- 3. Push Autoset.
- **4.** Adjust the vertical position, scale, and offset using the front-panel knobs.

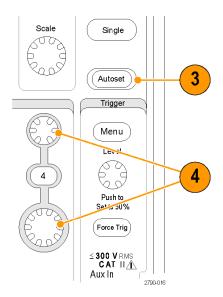

Figure 19: MSO5000B and DPO5000B Series

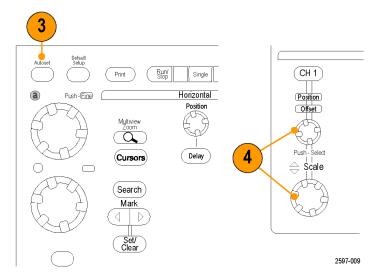

Figure 20: MSO70000DX and DPO70000DX Series

5. Adjust the horizontal position and scale using the front-panel knobs.

The horizontal position determines the number of pretrigger and posttrigger samples.

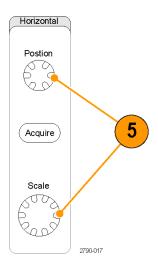

Figure 21: MSO5000B and DPO5000B Series

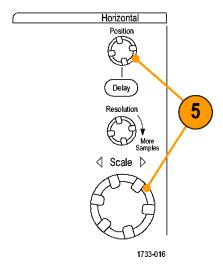

Figure 22: MSO70000DX and DPO70000DX Series

6. If you want to invert the input signal, click the **Invert** button to toggle invert on and off. The Invert button is in the Vertical Setup menu or the Deskew/Attenuation/Invert menu.

Using Default Setup

1. To quickly return to the factory default settings, push **DEFAULT SETUP**.

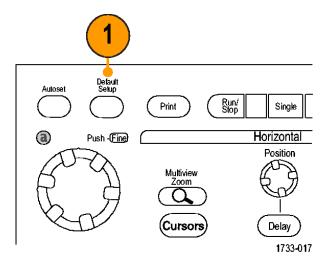

Figure 23: MSO70000DX and DPO70000DX Series

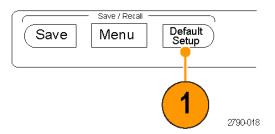

Figure 24: MSO5000B and DPO5000B Series

Using Autoset

Use **Autoset** to quickly and automatically set up the instrument (acquisition, horizontal, trigger, and vertical) based on the characteristics of the input signal. Autoset makes adjustments to the signal such that the waveform displays two or three cycles with the trigger level near the midlevel.

- 1. Connect the probe, and then select the input channel. (See Setting up analog signal input on page 42)
- 2. Push the Autoset button to execute an Autoset.

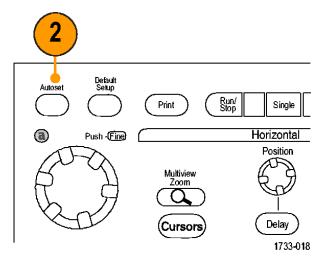

Figure 25: MSO70000DX and DPO70000DX Series

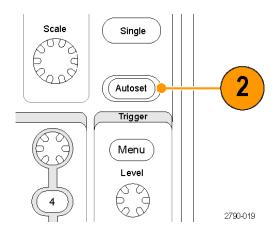

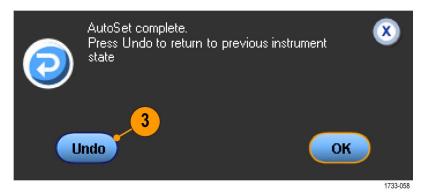

Figure 26: MSO5000B and DPO5000B Series

3. Click **Undo** to undo the last Autoset. Parameters that are not affected by Autoset retain their settings.

Quick tips

- Autoset automatically sets up the analog channels.
- On instruments with iCapture, autoset automatically sets up the iCapture channels.
- · To position the waveform appropriately, Autoset may change the vertical position. Autoset may also adjust vertical offset.
- If you use Autoset when one or more channels are displayed, the instrument selects the lowest numbered channel for horizontal scaling and triggering. You can individually control the vertical scaling of each channel.
- If you use Autoset when no channels are displayed, the instrument turns on channel one (Ch 1) and scales it.
- Close Autoset Undo control window by clicking the X. After Autoset Undo closes, you can still undo the last Autoset by selecting the
 Undo Last Autoset command from the Edit menu.
- Stop the Autoset Undo control window from opening automatically by changing the User Preferences in the Utilities menu.

Probe compensation and deskew

To optimize measurement accuracy, see the instrument online help to perform the following procedures:

- · Compensate passive probes
- · Compensate active probes
- Deskew input channels

Acquisition concepts

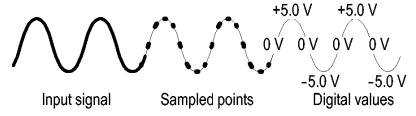

Acquisition hardware

Before a signal is displayed, it must pass through the input channel where it is scaled and digitized. Each channel has a dedicated input amplifier and digitizer.

Each channel produces a stream of digital data from which the instrument extracts waveform records.

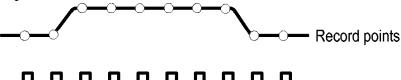

Sampling process

Acquisition is the process of sampling an analogsignal, converting it into digital data, and assembling it into a waveform record, which is then stored in acquisition memory.

Real-Time sampling

In real-time sampling, the instrument digitizes all of the points it acquires using one trigger event. Use real-time sampling to capture single-shot or transient events.

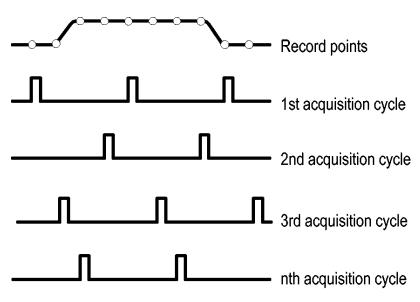

Interpolated Real-Time sampling

In interpolated real-time sampling, the instrument digitizes all of the points it acquires using one trigger event. If the instrument cannot acquire enough samples for a complete waveform at the maximum real-time sample rate, it interpolates. Use interpolated real-time sampling to capture single-shot or transient events.

Equivalent-Time sampling

The instrument uses equivalent-time sampling to extend its sample rate beyond its real-time maximum sampling rate. Equivalent-time sampling is only used if Equivalent Time is selected and the time base is set to a sampling rate that is too fast to create a waveform record using real-time sampling.

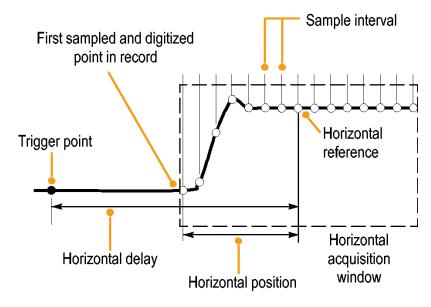

The instrument makes multiple acquisitions of a repetitive waveform to obtain the sample density required for one complete waveform record. Thus, equivalent time sampling should only be used with repetitive signals.

Waveform record

The instrument builds the waveform record through use of the following parameters:

- · Sample interval: The time between sample points.
- Record length: The number of samples required to fill a waveform record.
- · Trigger point: The zero time reference in a waveform record.
- Horizontal position: When horizontal delay is off, the horizontal position is a percentage of the waveform record between 0 and 99.9 percent. The trigger point and the horizontal reference are at the same time in the waveform record. For example, if the horizontal position is 50 percent, then the trigger point is in the middle of the waveform record. When horizontal delay is on, the time from the trigger point to the horizontal reference is the horizontal delay.

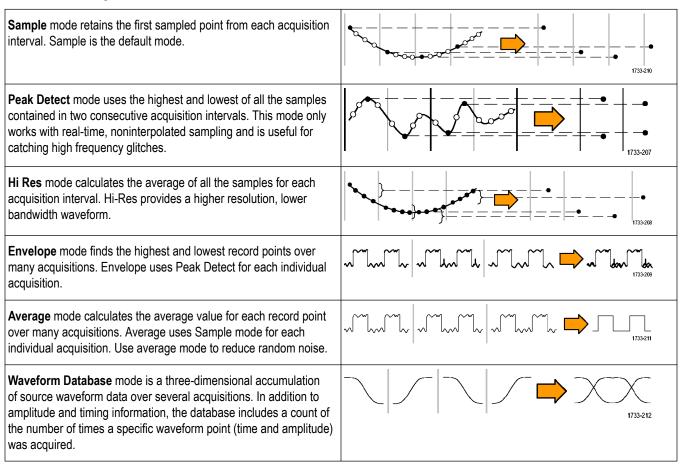

Interpolation

Your instrument can interpolate between the samples it acquires when it does not have all of the actual samples it needs to fill the waveform record. Linear interpolation computes record points between actual acquired samples by using a straight line fit.

 $\sin(x)/x$ interpolation computes record points using a curve fit between the actual values acquired. $\sin(x)/x$ interpolation is the default interpolation mode because it requires fewer actual sample points than linear interpolation to accurately represent the waveform.

How the acquisition modes work

Enable enhanced effective number of bits

Use Acquisition tab to turn the Enhanced Effective Number of Bits (ENOB) on or off to optimize the waveform detail. This control is only available on MSO/DPO7000DX models.

1. Click the **Enhanced Effective Number of Bits** check box to turn ENOB On or Off. This control is available in the Acquisitions tab of the Horizontal/Acquisition control window.

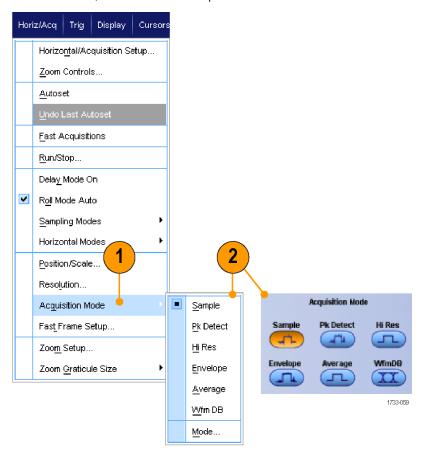

Enhanced Effective Number of Bits enables interleave correction DSP that improves the effective number of bits. This control is only available in some instrument models. This control is not available in Hi Res mode.

When Enhanced Effective Number of Bits is enabled, EB+ is displayed in the horizontal/acquisition readout.

Changing the acquisition mode

Use this procedure to change the acquisition mode.

- 1. Select Horiz/Acq > Acquisition Mode.
- 2. To select an acquisition mode, do one of the following:
 - Select an acquisition mode directly from the menu.
 - Click **Mode...**, and then select an acquisition mode.

3. For Average or Envelope acquisition modes, click the **#of Wfms** control, and then set the number of waveforms with the multipurpose knob. For WfmDB mode, click the **Samples** control, and then set the number of samples with the multipurpose knob.

Quick tip

· Click the keypad icon to set the number of waveforms or samples.

Starting and stopping an acquisition

After the channels that you want to acquire are selected, use the following procedure.

- 1. Push the front-panel Run/Stop button to start the acquisition.
- 2. Pushthe Run/Stop button again to stop the acquisition.
- 3. To take a single acquisition, push the **Single** button.

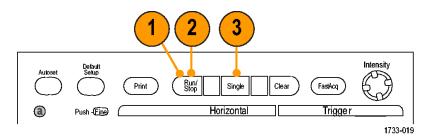

Figure 27: MSO70000DX and DPO70000DX Series

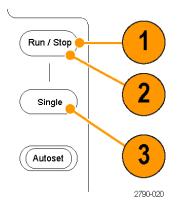

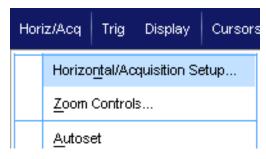

Figure 28: MSO5000B and DPO5000B Series

Selecting the horizontal mode

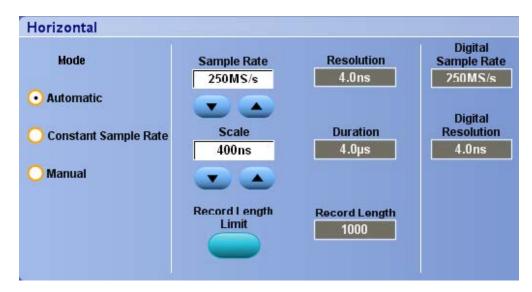

Your instrument has three horizontal modes. Automatic is the default mode. Select the horizontal mode that works best for your test setup.

To set the horizontal mode, select **Horiz/Acq > Horizontal/Acquisition Setup** to display the horizontal control window. Choose one of the modes described below.

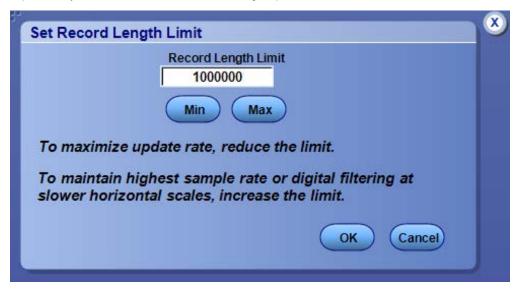

In Automatic mode you can set the Scale and Sample Rate. Record length is a dependent variable. If changing the scale would cause the record length to exceed the Record Length Limit, the sample rate is decreased to the next available setting.

If the sampling mode is real time and the sample rate is at the real time limit, attempting to increase the sample rate has no effect.

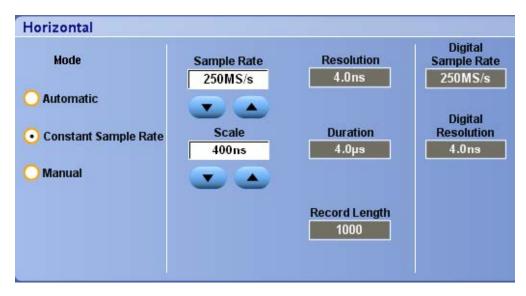

To set the Record Length Limit, click **Record Length Limit** and set the limit using the buttons or keypad. The default maximum limit depends on your instrument model and record length option.

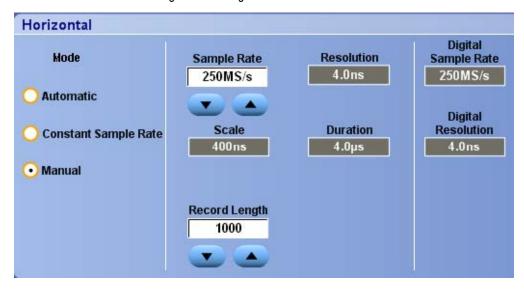

In Constant Sample Rate mode you can set the Sample Rate and Scale. The default sample rate ensures bandwidth filter operation. Record length is a dependent variable. The maximum record length depends on your instrument model and record length option.

The front-panel resolution knob changes the sample rate in both automatic and constant sample rate modes.

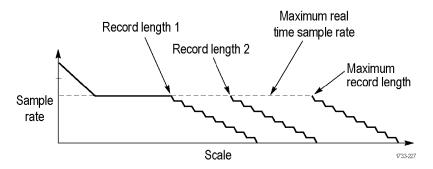

In Manual mode you can set the Sample Rate and Record Length. Horizontal Scale is a dependent variable calculated from the sample rate and record length.

The Horizontal Scale knob changes record length in manual mode.

All three modes interact with sample rate, scale, and record length as shown. The horizontal line is the maximum real-time sample rate. Each staircase shows that as you increase the scale, the sample rate must decrease when either the maximum record length or the record length limit you set is reached. Manual mode uses the maximum record length.

Automatic and Constant Sample Rate modes are identical. However, Constant Sample Rate mode keeps the sample rate constant at a rate that guarantees bandwidth enhancement filters are used.

Quick tips

Digital sample rate and resolution are dependent variables, and are controlled by the analog sample rate selection.

Using FastAcq

Fast acquisition mode reduces the dead time between waveform acquisitions, enabling the capture and display of transient events such as glitches or runt pulses. Fast acquisition mode can also display waveform phenomena at an intensity that reflects their rate-of-occurrence.

1. Push FastAcq.

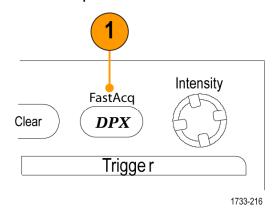

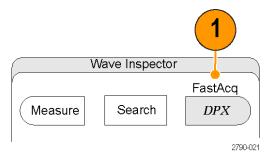

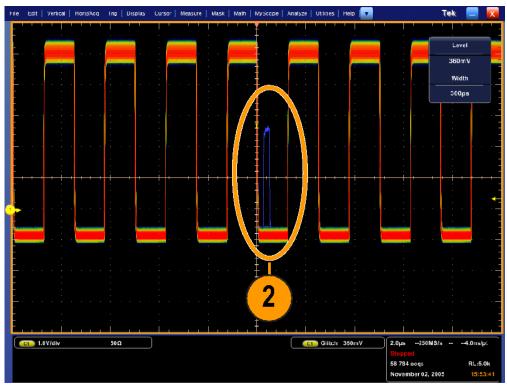

Figure 29: MSO70000DX and DPO70000DX Series

2. Find glitches, transients, or other random events.

When you have identified an anomaly, set the trigger system up to look for it. (See Capturing intermittent anomalies on page 191.)

1733-218

Quick tips

- Digital channels and buses are not available in FastAcq mode.
- To optimize for capturing details or rare events, select Horiz/Acq > Horizontal/Acquisition Setup > Acquisition > FastAcq, and then select Optimize For Capturing Details or Capturing rare events.

Using DSP enhanced bandwidth

If your instrument has the enhanced bandwidth feature, use the DSP (digital signal processing) enhanced bandwidth for more accurate rise time measurements, to extend the bandwidth, and flatten the passband at the full sample rate. The enhanced bandwidth provides a matched response across enabled channels so you can perform channel-to-channel comparison and differential measurements.

1. Push Autoset to set the horizontal, vertical, and trigger controls or set the controls manual.

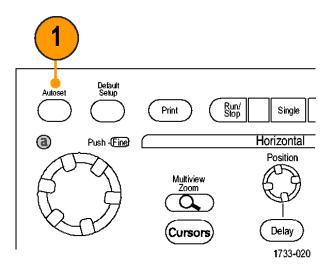

Figure 30: MSO70000DX and DPO70000DX Series

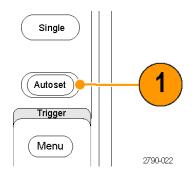

Figure 31: MSO5000B and DPO5000B Series

2. Select Vertical > Bandwidth Enhanced....

- 3. Click Digital Filters (DSP) Enabled to turn the enhanced bandwidth on. You must set the sample rate correctly to enable DSP.
- 4. To force a constant sample rate that enables DSP filters, check Force Constant Sample Rate.

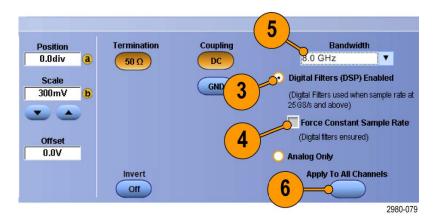

5. Select the desired bandwidth from the Bandwidth list.

The available bandwidth selections depend on your instrument, probe, and probe tip.

Selecting Analog Only selects a hardware (HW) bandwidth.

6. To apply your selections to all channels, check Apply To All Channels.

When different probing makes it impossible for the instrument to set all channels the same, the instrument sets each channel to the closest bandwidth value possible.

The bandwidth indicator appears in the vertical readout when the enhanced bandwidth is turned on.

Quick tips

- Right click the waveform handle to display a menu where you can select the channel bandwidth and other bandwidth enhanced settings.
- The DSP enhanced bandwidth occurs at maximum sample rate.
- Use the DSP enhanced bandwidth when your signals have rise times less than 50 ps.
- Select Analog Only for higher waveform throughput, overdriven signals, and when you prefer to use your own DSP post-processing.
- You can limit the instrument bandwidth by selecting Vertical > Bandwidth Limit and then selecting the bandwidth.

Setting the Termination Voltage

Termination voltage adjustment is only available on MSO/DPO70000DX models.

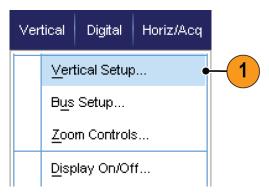

Oscilloscope inputs have traditionally been terminated to ground. The signals being measured often are not ground referenced. Pulling signals to ground can impair measurement results or potentially damage the DUT.

The instrument delivers a variable termination voltage up to ±3.4 volts to the device under test (DUT), and supports a large offset range. This allows you to adjust the oscilloscope to mirror the conditions and behavior of the DUT, and measure high-speed signals in an environment similar to the one in which they operate.

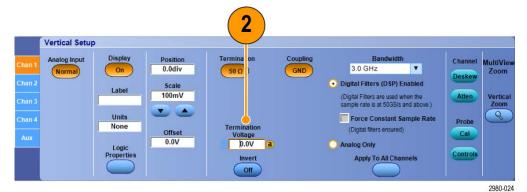

Using the combination of termination voltage and offset to center the oscilloscope reference point in the operating range of the DUT maximizes the available dynamic range and minimizes the noise of the measurement system.

To set the termination voltage of a channel, do these steps:

1. Select Vertical > Vertical Setup.

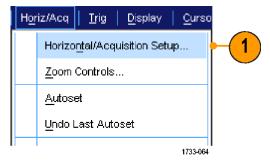

2. Click in the Termination Voltage field. Set the termination voltage using the keypad or multipurpose knobs.

Using Roll Mode

Roll mode gives a display similar to a strip chart recorder for low-frequency signals. Roll mode displays acquired data points without waiting for the acquisition of a complete waveform record.

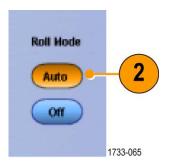

1. Select Horiz/Acq > Horizontal/Acquisition Setup....

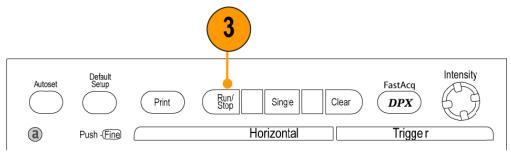

2. If not selected, click the Acquisition tab. Click Auto to turn on Roll mode.

Note: Roll mode requires Sample, Peak Detect, or Hi Res acquisition mode.

- 3. To stop acquisitions in Roll mode:
 - If you are not in Single Sequence, push RUN/STOP to stop Roll mode.
 - If you are in Single Sequence, Roll mode acquisitions stop automatically when a complete record is acquired.

1733-021

Figure 32: MSO70000DX and DPO70000DX Series

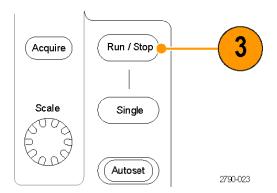

Figure 33: MSO5000B and DPO5000B Series

Quick tips

- Switching to Envelope, Average, or WfmDB acquisition mode will turn off Roll mode.
- Roll mode is disabled when you set the horizontal scale to 50 ms per division or faster.

Setting up digital signal input

Use Digital setup menus to set up the digital channels to acquire signals. Digital channels are available only on MSO70000DX and MSO5000B Series instruments, DPO5000B Series instruments with option MSOE installed, and DPO70000DX instruments with option MSOU installed.

- 1. Connect the logic probe to the instrument.
- 2. Connect the probe to the input signal sources.

CAUTION: To prevent damage to the instrument always wear an antistatic wrist strap when making connections to the instrument and observe the maximum input voltage ratings for input connectors.

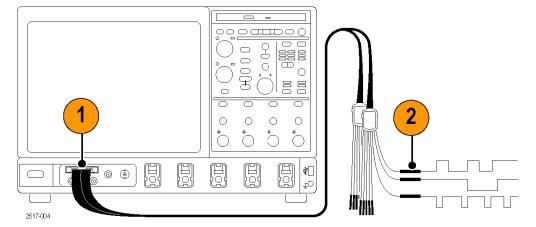

Figure 34: MSO70000DX and DPO70000DX Series

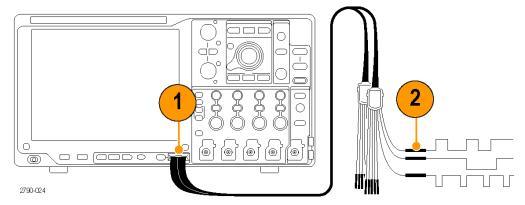

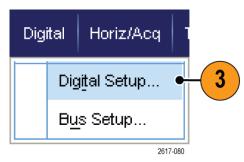

Figure 35: MSO5000B and DPO5000B Series

3. Set up digital channels and buses using the Digital menus.

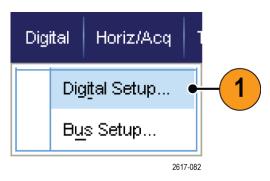

(See Setting up digital channels.) and (See Setting up a bus.)

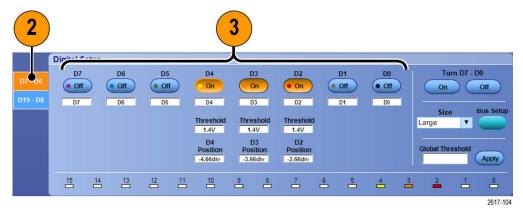

Setting up digital channels

You can set a digital channel threshold, size, position and label on MSO70000DX and MSO5000B Series instruments, DPO5000B Series instruments with option MSOE installed, and DPO70000DX instruments with option MSOU installed.

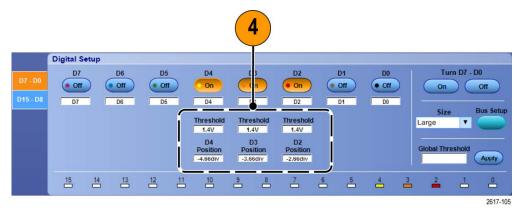

1. Select Digital > Digital Setup.

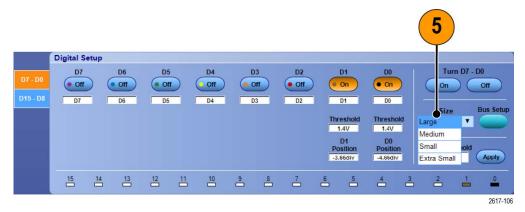

- 2. Select the D7 D0 or D15 D8 tab for the digital channels you want to set up.
- 3. Click a digital channel button to toggle the display of the digital channel on or off.

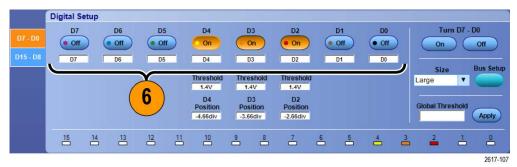

4. Click **Threshold** or **Position** and adjust them using the keyboard or multipurpose knobs. Or, set the threshold of all 16 channels by entering a Global Threshold value and clicking **Apply**.

5. To change the displayed vertical size of all digital channels, click Size and select the display size from the list.

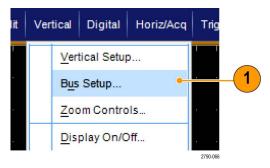

6. To change a digital channel label, click the label and enter a new label using the keyboard.

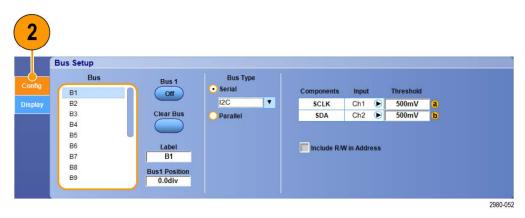

Setting up a bus

You can set up serial (optional) and parallel buses.

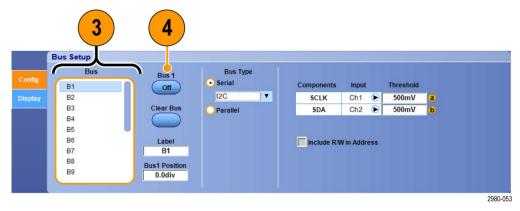

1. Select Vertical > Bus Setup or, on some instruments, Digital > Bus Setup.

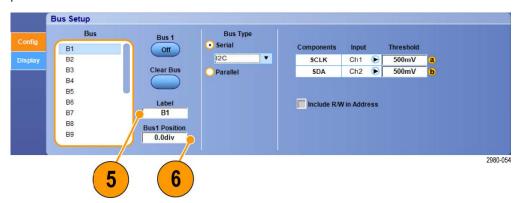

2. Select the Config tab.

- 3. Scroll to, and then select the bus to set up.
- 4. To toggle the display of the bus on or off, click the **Bus** button.

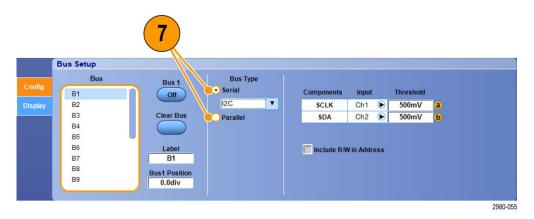

- 5. To change the default label of the bus, click **Label** and enter a new label using the keyboard.
- **6.** To change the displayed position of the bus, click **Bus Position** and use the keyboard or multipurpose knob to enter a new bus position.

7. To select the bus type, click **Bus Type Serial** or **Parallel**.

You can set up each bus type.

(See Set up a serial bus.) or (See Set up a parallel bus.)

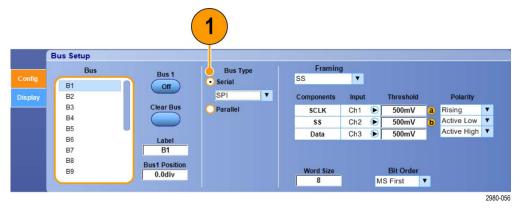

Quick tips

Position a bus or waveform by clicking on the bus or waveform handle and dragging the handle to the desired position.

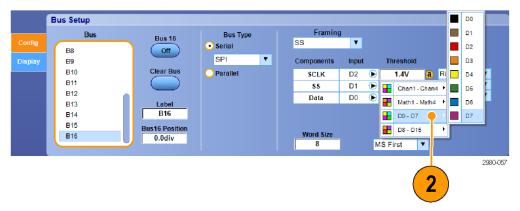

Set up a serial bus

You can set serial (optional) bus parameters. You can use digital channels in bus definitions on MSO Series instruments only.

To set up a serial bus, select Bus Type Serial and select the type of serial bus from the drop-down list.
 Each bus type has its own collection of parameters that you set up. Set up other bus types as appropriate for the selected bus.
 See the online help for additional help setting up a bus.

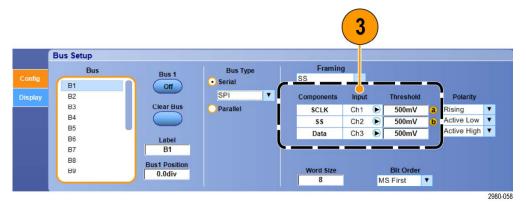

2. To select the input for the displayed components of the bus, click the component Input and select from the displayed list.

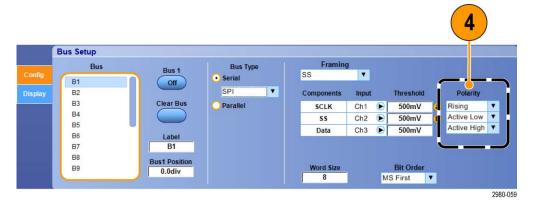

3. To set an input threshold, double click Threshold and enter the threshold using the keypad.

Note: To set thresholds independently when they are currently shared, go to **Trig > A Event (Main) Trigger Setup** and change **Settings** to **Independent**.

4. To select the polarity for the displayed components of the bus, click the component Polarity and select from the displayed list.

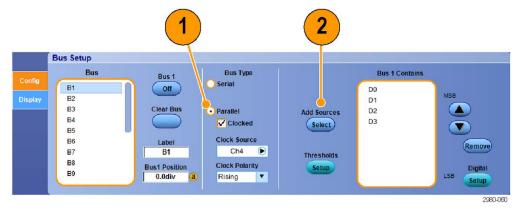

Quick tips

To use a custom serial decoder, see the online help.

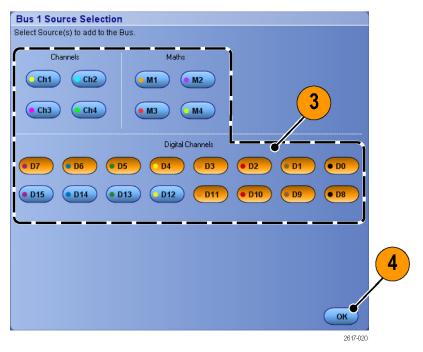

Set up a parallel bus

You can set parallel bus parameters. You can use digital channels in bus definitions on MSO Series instruments only.

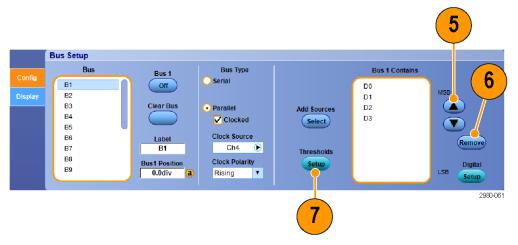

- To set up a parallel bus, select Bus Type Parallel.
 See the online help for additional help setting up a bus.
- 2. To add sources to the bus, click the Add Sources Select button.

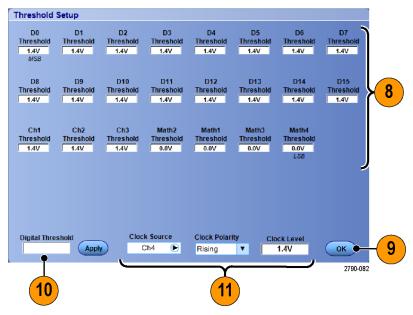

- 3. Click the button for each channel you want in the bus. The order of the parallel bus is determined by the order in which you select the channels. Digital channels are available as sources only on MSO Series instruments.
- 4. Click the **OK** button.

- 5. To move a channel within the bus, scroll to and select the channel you want to move, and then click the up or down arrow buttons.
- 6. To remove a channel within the bus, scroll to and select the channel you want to remove, and then click the Remove button.
- 7. To set channel thresholds, click the Thresholds **Setup** button.

- **8.** For each threshold you want to set, double click the channel Threshold, and enter the threshold using the keypad or multipurpose knobs.
- **9.** When the desired thresholds have been set, click the **OK** button.
- 10. To set all channels to the same threshold, double click **Digital Threshold** and use the keypad to enter a threshold. Then click **Apply**.

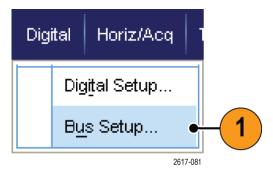

11. On MSO70000DX instruments, to set the clock source and polarity, double click the item and select from the displayed list. To set the clock level, double click the Clock Level, and enter the level using the keypad or multipurpose knobs.

Setup bus display

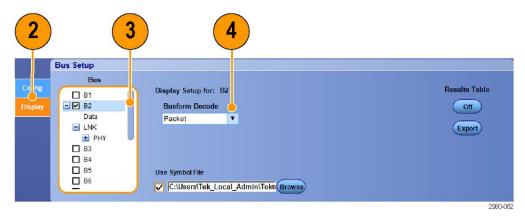

You can set the bus style and decoding. You can use digital channels in bus definitions on MSO Series instruments only.

1. Select Digital > Bus Setup.

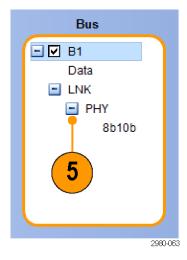

- 2. Select the Display tab.
- 3. To select the bus, scroll to display the bus, and then select the bus.
- 4. Select the decoding from the bus decoding list.

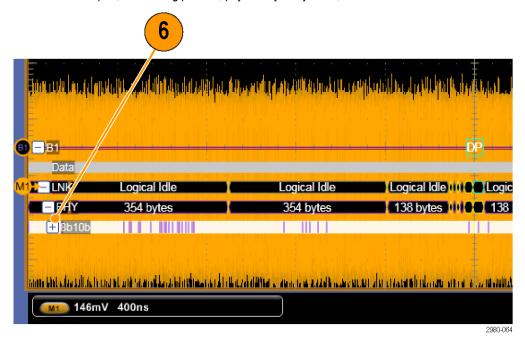

See the online help for information on the Results Table.

5. Click a + box to expand (display additional) the views, or click a - box to collapse (remove) views.

6. Bus views may also be added or removed from the display by clicking on the + box or - box in the display. Available views may include Transaction/transport, link/framing/packets, physical/bytes/symbols, and bit level.

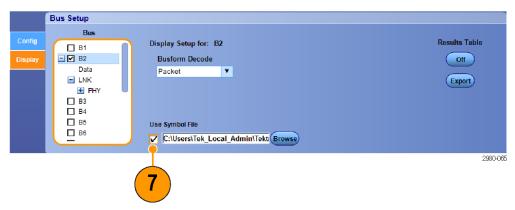

70

7. If using a symbol table, check Use Symbol File. Click Browse and browse to the symbol table file.

For some buses other settings are available. Set the other settings as appropriate for your bus.

See the online help for additional help setting up a bus.

When and why to turn on MagniVu

For the MSO5000B Series, MagniVu gives you higher resolution to accurately determine edge placement. This helps you make precise timing measurements on digital edges. You can see up to 32 times more detail than with normal digital channel sampling.

The MagniVu record is acquired in parallel to the main digital acquisition and is available at any time, running or stopped. MagniVu provides an ultra high resolution view of your data sampled at a maximum resolution of 60.6 ps for 10,000 points centered around the trigger.

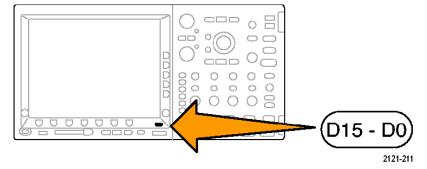

Note: MagniVu centers itself around the trigger point. If you turn MagniVu on while using a large record length and you are looking somewhere other than the trigger point, then the digital signal may be off screen. In most of these cases, you can find the digital record by looking for the digital signal in the upper overview and panning accordingly.

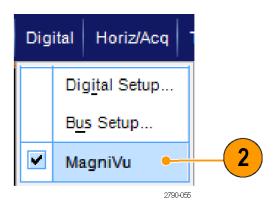

Using MagniVu

To use MagniVu do the following:

1. Push D15 - D0.

2. Select **Digital** > **MagniVu** to toggle MagniVu On.

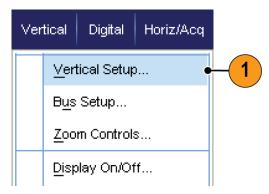

Quick tips

- If you think you need more timing resolution, turn on MagniVu to increase the resolution.
- MagniVu is always acquired. If the oscilloscope is in a stopped state, turn on MagniVu and still get the resolution without taking another
 acquisition.

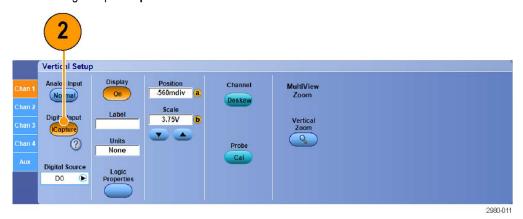

Viewing analog characteristics of digital waveforms

iCapture allows you to view the analog characteristics of digital channel signals. Additional measurement capabilities are available while viewing the analog characteristics of a waveform. iCapture is available on MSO70000DX Series instruments and on DPO70000DX instruments with option MSOU installed.

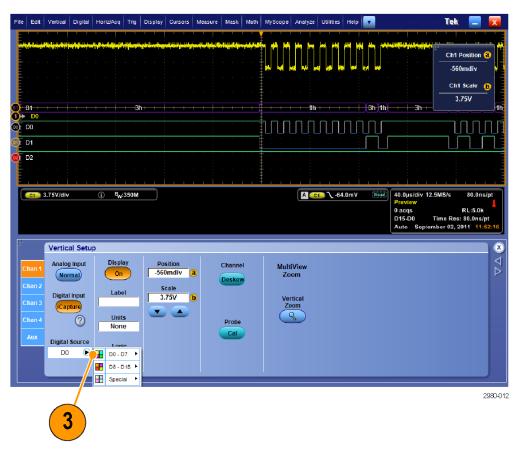

1. Select Vertical > Vertical Setup.

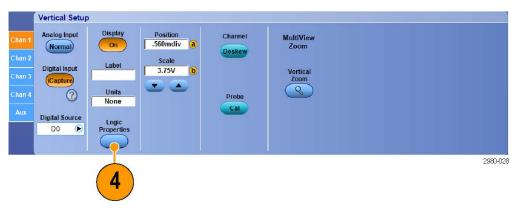

2. Press the Digital Input iCapture button.

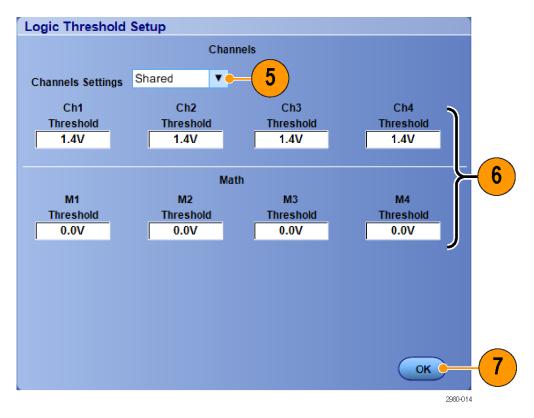

3. Click **Digital Source** and select a digital channel to send through the analog input.

4. To set channel thresholds used when converting an analog waveform to digital format for inclusion in a bus, click the **Logic Properties** button.

- 5. To choose whether to share threshold settings or have independent threshold settings, click **Channel Settings** and select **Shared** or **Independent** from the list.
- 6. For each threshold you want to set, click the channel threshold. Set the threshold using the keypad or multipurpose knobs.
- 7. When the required thresholds have been set, click the **OK** button.

Quick tips

If using iCapture on an MSO70000DX, you can select the digital source as the trigger signal.

Using FastFrame mode

FastFrame allows you to capture many trigger events as single records in a larger record, and then view and measure each record individually. Time Stamps display the absolute trigger time for a specific frame and the relative time between triggers of two specified frames.

1. Push AUTOSET to set the horizontal, vertical, and trigger controls or set the controls manually.

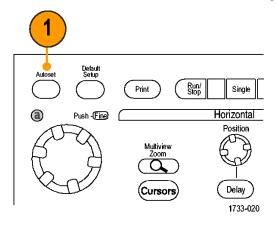

Figure 36: MSO70000DX and DPO70000DX Series

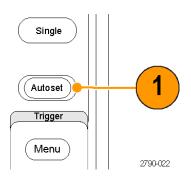

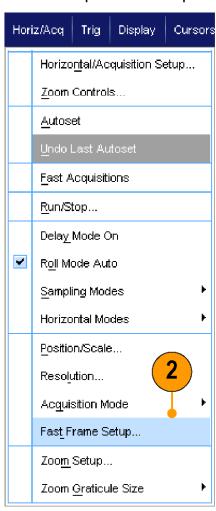

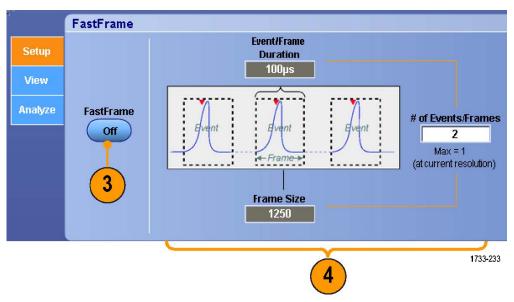

Figure 37: MSO5000B and DPO5000B Series

2. Select Horiz/Acq > FastFrame Setup....

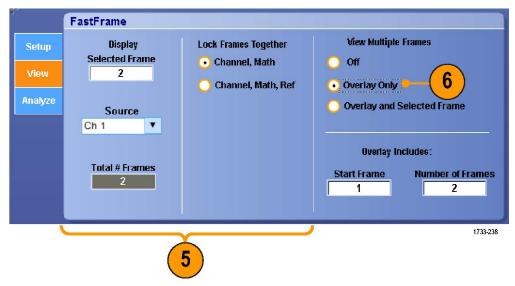

1733-232

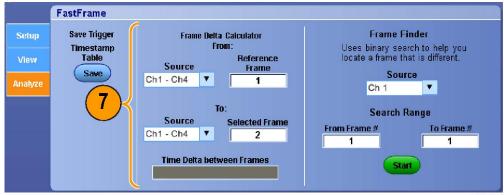

- **3.** Push FastFrame to toggle it **On**.
- 4. Select Frame Size and # of Events Frames. Then use the multipurpose knobs to set each one. Number of frames represents the number of trigger events that are captured. Frame size is the number of samples that are stored with each trigger event (or frame). The number of frames is reduced if there is insufficient memory to store all the records. The shorter the frame length, the more frames you can acquire.

- 5. Use the Frame Viewing controls to select the frame that you want to view.
- 6. To view multiple frames superimposed over each other, select Overlay Only.

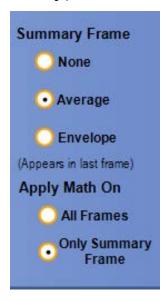

7. Use the Time Stamps controls to select the source for, and frame number of, the reference frame. The reference frame is the starting point when measuring the relative time between two frames.

1733-235

Quick tips

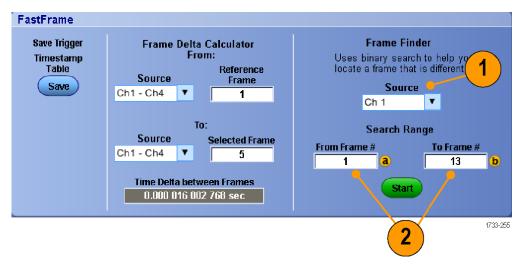

- · Digital channels and buses are not available in FastFrame mode.
- Use FastFrame when you want to preserve the data associated with each trigger event for further analysis or visual inspections.
- Use FastFrame when you want to capture multiple events that have long dead times between them that are of no interest to you.
- Multiple frames are best viewed with the Normal, Green, or Gray color palettes because the dark blue selected frame may be hard to distinguish if you use Temp or Spectral.
- If you select an Average Summary Frame, you can set Math functions (Averaging) to apply to All Frames or have it apply to Only
 the Summary Frame. If the summary data is of primary interest, selecting Summary Frame Only can substantially improve system
 throughput.

Using FastFrame frame finder

Frame finder allows you to find a FastFrame frame that is different from other frames.

- 1. Select the source of the FastFrame frames.
- 2. Set the Search Range by entering the From Frame # and the To Frame #.

3. Push Run/Stop to stop acquisitions.

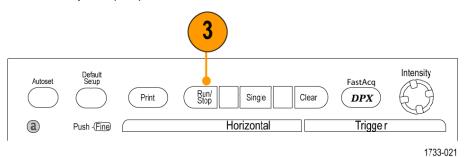

Figure 38: MSO70000DX and DPO70000DX Series

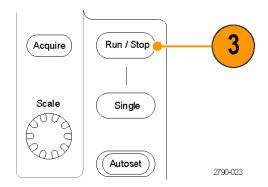

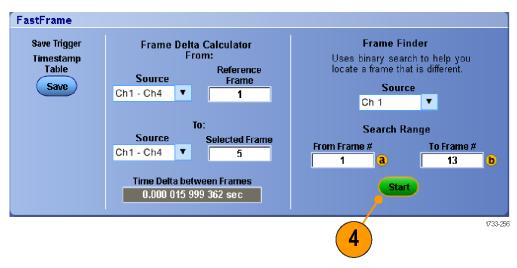

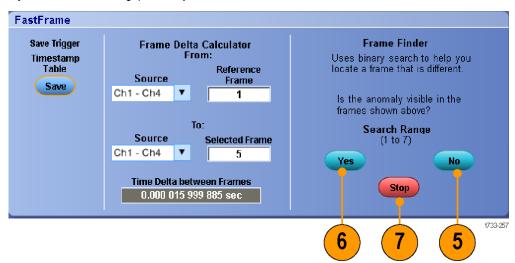

Figure 39: MSO5000B and DPO5000B Series

4. Push Start to start the search.

Frame Finder searches for and displays a different frame.

- 5. If the anomaly you are looking for is not in the displayed frame, push No. Frame Finder searches for another different frame.
- 6. If the anomaly you are looking for is in the displayed frame, push Yes.
- 7. If you are done searching, push Stop.

8. Push Run/Stop to restart acquisitions.

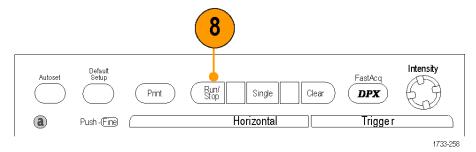

Figure 40: MSO70000DX and DPO70000DX Series

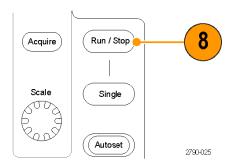

Figure 41: MSO5000B and DPO5000B Series

Pinpoint triggers

The Pinpoint trigger system comes with advanced trigger types that are usable on both A and B triggers, and it can reset the trigger sequence if the B event does not occur after a specific number of events or a specific time. Pinpoint triggers support capture of events based on the most complex trigger event or sequence of trigger events.

Only a portion of the Pinpoint trigger functionality is available on MSO5000B and DPO5000B instruments.

This section contains concepts and procedures for using the trigger system.

Triggering concepts

Trigger event

The trigger event establishes the time-zero point in the waveform record. All waveform record data are located in time with respect to that point. The instrument continuously acquires and retains enough sample points to fill the pretrigger part of the waveform record. When a trigger event occurs, the instrument starts acquiring samples to build the posttrigger part of the waveform record (displayed after, or to the right of, the trigger event). Once a trigger is recognized, the instrument will not accept another trigger until the acquisition is complete and the holdoff time has expired.

Trigger modes

The trigger mode determines how the instrument behaves in the absence of a trigger event.

- Normal trigger mode enables the instrument to acquire a waveform only when it is triggered. If no trigger occurs, the last waveform record acquired remains on the display. If no last waveform exists, no waveform is displayed.
- Auto trigger mode enables the instrument to acquire a waveform even if a trigger does not occur. Auto mode uses a timer that starts
 after a trigger event occurs. If another trigger event is not detected before the timer times out, the instrument forces a trigger. The
 length of time it waits for a trigger event depends on the time base setting.

Auto mode, when forcing triggers in the absence of valid triggering events, does not synchronize the waveform on the display. The waveform will appear to roll across the screen. If valid triggers occur, the display will become stable.

In edge-trigger mode, force the instrument to trigger by pushing the Force Trigger button on the Trigger Setup control window.

Select the trigger mode in the **Trig > Mode**. For more information, see the instrument online help.

Trigger holdoff

Trigger holdoff can help stabilize triggering, by extending the period in which further trigger recognition is suppressed after initiating an acquisition. Such an extension can help the system skip over the remaining events of a recurring burst of events, and thus always trigger on the first event in each burst. Adjust holdoff to obtain stable triggering when the instrument is triggering on undesired trigger events.

Set the trigger holdoff in the **Trig > Holdoff** menu. For more information, see the instrument online help.

Trigger coupling

Trigger coupling determines what part of the signal is passed to the trigger circuit. Edge triggering can use all available coupling types: AC, DC, Low Frequency Rejection, High Frequency Rejection, and Noise Rejection. All other trigger types use DC coupling only. Your instrument may not offer all coupling types.

Select the trigger coupling in the **Trig > A Event (Main) Trigger Setup** menu. For more information, see the instrument online help.

Horizontal position

Horizontal position defines where the trigger occurs on the waveform record. It lets you choose how much the instrument acquires before and after the trigger event. The part of the record that occurs before the trigger is the pretrigger part. The part that occurs after the trigger is the posttrigger part.

Pretrigger data is valuable when troubleshooting. For example, if you are trying to find the cause of an unwanted glitch in your test circuit, trigger on the glitch and make the pretrigger period large enough to capture data before the glitch. By analyzing what happens before the glitch, you may uncover information that helps you find the source of the glitch. Alternatively, to see what is happening in your system as a result of the trigger event, make the posttrigger period large enough to capture data after the trigger.

Slope and level

The slope control determines whether the instrument finds the trigger point on the rising or the falling edge of a signal. The level control determines where on that edge the trigger point occurs.

Delayed trigger system

You can trigger with the A (Main) trigger system alone or combine the A (Main) trigger with the B (Delayed) trigger to trigger on sequential events. When using sequential triggering, the A trigger event arms the trigger system, and the B trigger event triggers the instrument when the B trigger conditions are met. A and B triggers can (and typically do) have separate sources. The B trigger condition is based on a time delay or a specified number of events. (See page *Using a (Main) and b (Delayed) triggers.*)

Choosing a trigger type

Your instrument allows you to modify basic trigger parameters from the front panel or set up more advanced triggers in the Trigger Setup control window.

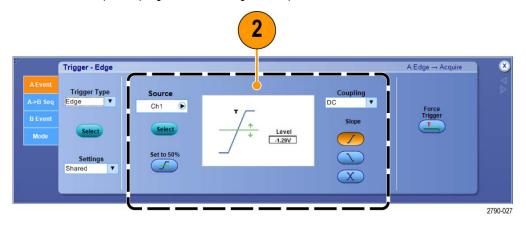

Note: Some trigger type selections are not available on some instruments.

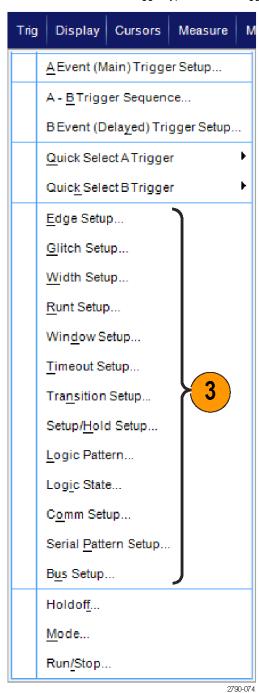

1. Select Trig > Edge Setup.

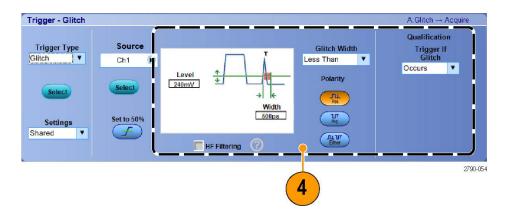

2. Set the source, slope, coupling, and mode using the setup menu.

3. To select one of the other trigger types, select a trigger type directly from the Trig menu.

4. Complete the trigger setup using the controls displayed for the trigger type. The controls to set up the trigger vary depending on the trigger type, instrument model, and options.

Trigger selections

Trigger Type		Trigger Conditions
Edge	I	Trigger on a rising or falling edge, as defined by the slope control. Coupling choices are DC, AC, LF Reject, HF Reject, and Noise Reject.
Glitch		Trigger on a pulse narrower (or wider) than the specified width or ignore glitches narrower (or wider) than the specified width.
Width	h	Trigger on pulses that are inside or outside a specified time range. Can trigger on positive or negative pulses.
Runt	Ī.	Trigger on a pulse amplitude that crosses one threshold but fails to cross a second threshold before recrossing the first. Can detect positive or negative runts, or only those wider than a specified width. These pulses can also be qualified by the logical state of other channels.
Window	गेंग्र	Trigger when the input signal rises above an upper threshold level or falls below a lower threshold level. Trigger the instrument as the signal is entering or leaving the threshold window. Qualify the trigger event in terms of time by using the Trigger When Wider option, or by the logical state of other channels using the Trigger When Logic option.
Timeout		Trigger when no pulse is detected within a specified time.
Transition	#	Trigger on pulse edges that traverse between two thresholds at faster or slower rates than the specified time. The pulse edges can be positive or negative.
Serial	0010	Trigger on 64-bit NRZ serial pattern at data rates up to 1.25Gb/s and 4 8b/10b symbols at data rates up to 6.25Gb/s (MSO70000DX and DPO70000DX only). Requires ST6G (MSO70000DX and DPO70000DX). Includes clock recovery. Push the Push to Set 50% control to reinitialize clock recovery.
		Pattern Lock automatically finds and locks on a long repeating pseudo-random bit sequence (PRBS). This lock means that the instrument knows the bit length of the pseudo-random bit sequence and can predict when the cycle repeats. Pattern Lock enables the instrument to take samples at specific locations in a data pattern with outstanding time base accuracy.

Trigger Type		Trigger Conditions
Pattern	\Rightarrow	Trigger when logic inputs cause the selected function to become True or False. You can also specify that the logic conditions must be satisfied for a specific amount of time before triggering. Not recommended with iCapture inputs if using more than one source or an external trigger.
State		Trigger when all of the logic inputs to the selected logic function cause the function to be True or False when the clock input changes state. Not recommended with iCapture inputs if using more than one source or an external trigger.
Setup/ Hold	≠	Trigger when a logic input changes state inside the setup and hold times relative to the clock. The mode triggers on a setup and hold violation. Not recommended with iCapture inputs if using more than one source or an external trigger.
Comm	R.R	Trigger with mask testing on communications codes and standards (analog channels only). The controls work together to define the parameters for the trigger event (available with Option MTM or MTH on some instruments). This mode includes clock recovery. Push the Push to Set 50% knob to reinitialize clock recovery.
Bus	(Bx7 +)	Trigger on components (such as a specified address) of a bus that you define. With some instruments and options, trigger types include parallel, SPI, RS-232, USB, and I ² C triggers. Not recommended with iCapture inputs if using more than one source or an external trigger.
Video	W.	Trigger on specified fields or lines of a composite video signal (MSO5000B, and DPO5000B Series only). Only composite signal formats are supported.
CAN	Bus of la	Trigger on CAN Bus signals. Not recommended with iCapture inputs if using more than one source or an external trigger.

Checking trigger status

Check the trigger status from the status lights on the front panel or from the readout.

Check the ARM, READY, and TRIG'D front-panel controls to determine the trigger status.

- If **TRIG'D** is on, the instrument has recognized avalid trigger and is filling the posttrigger part of the waveform.
- If **READY** is on, the instrument can accept, and is waiting for, a valid trigger to occur. Pretrigger data has been acquired.
- If ARM is on, the trigger circuitry is filling the pretrigger part of the waveform record.
- If both **TRIG'D** and **READY** are on, a valid A event trigger has been recognized and the instrument is waiting for a delayed trigger. When a delayed trigger is recognized, the posttrigger part of the delayed waveform will fill.
- If ARM, TRIG'D, and READY are off, acquisitions have stopped.

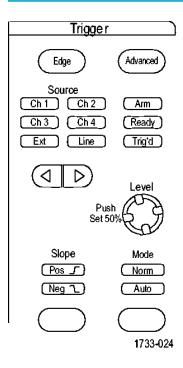

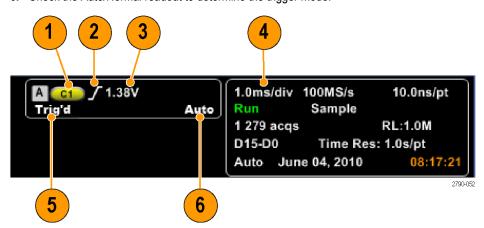

Figure 42: MSO70000DX and DPO70000DX Series

To quickly determine the settings of some key trigger parameters, check the Trigger readout at the bottom of the display. The readouts differ for edge and the advanced triggers:

- 1. A trigger source = Ch1
- 2. Trigger slope = rising edge
- 3. Trigger level
- 4. Time base
- 5. Check the ARM, READY, and TRIG'D readout to determine the trigger status.
- 6. Check the Auto/Normal readout to determine the trigger mode.

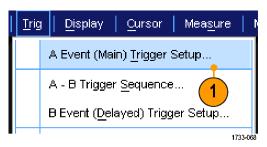

Using a (Main) and b (Delayed) triggers

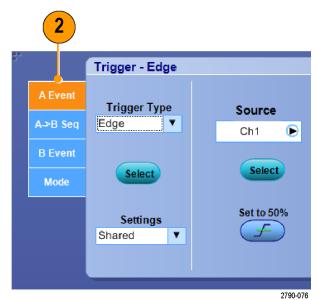

You can use the A Event (Main) trigger for simple signals or combine it with the B Event (Delayed) trigger to capture more complex signals. After the A Event occurs, the trigger system looks for the B Event before triggering and displaying the waveform.

A trigger

1. Select Trig > A Event (Main) Trigger Setup.

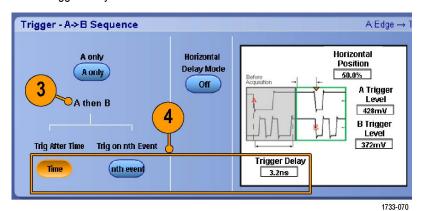

2. Set the A trigger type and source in the A Event tab.

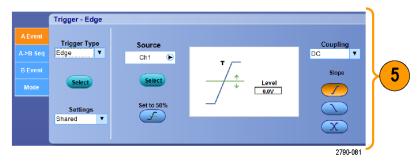

B trigger (Delayed)

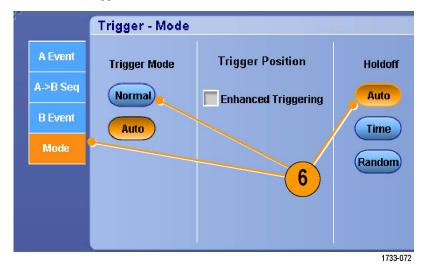

- 1. Choose a function in the $A \rightarrow B Seq$ tab.
- 2. Set the trigger delay time or the number of B events.

3. Set the B trigger characteristics in the B Event (Delayed) tab.

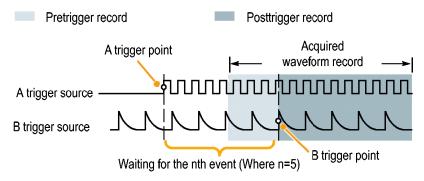

4. Select Normal Trigger Mode and Auto Holdoff in the Mode tab.

Trigger on B Event

The A trigger arms the instrument. Posttrigger acquisition starts on the nth B event.

B Trigger After Delay Time

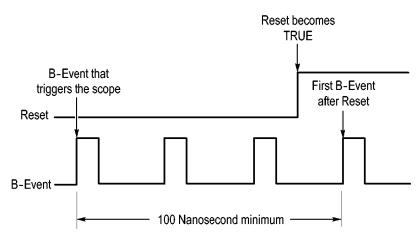

The A trigger arms the instrument. Posttrigger acquisition starts on the first B edge after the trigger delay time.

Triggering with Reset

You can specify a condition to reset the trigger system if it occurs before the B trigger event. When the reset event occurs, the trigger system stops waiting for the B event and returns to waiting for the A event.

Note: Triggering with reset is not available on MSO5000B and DPO5000B instruments.

Quick tips

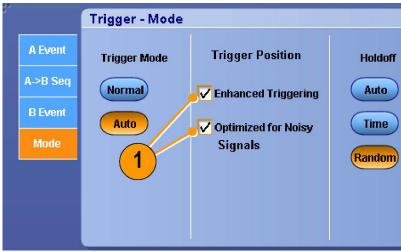

B-trigger delay time and horizontal delay time are independent functions. When you establish a trigger condition using either the A trigger alone or the A and B triggers together, you can also use horizontal delay to delay the acquisition by an additional amount.

Correcting trigger position

Trigger position correction corrects for differences in the data path and the trigger path to more accurately place the trigger on the displayed waveform. Trigger position correction can also use averaging to more accurately place the trigger on noisy signals. To more accurately place edge triggers on the display, perform the following procedure.

1. To more accurately place the trigger on the display, check **Enhanced Triggering**. To more accurately place the trigger on noisy signals, also check **Optimized for Noisy Signals**.

The Optimized for Noisy Signals selection is only available if Enhanced Triggering is selected.

1733-259

Triggering with B-Event Scan

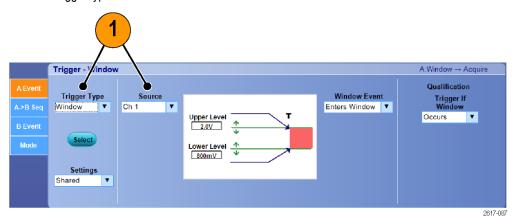

Use A->B Sequence B-Event Scan to create overlapped eye diagrams synchronized or initiated by an A trigger event.

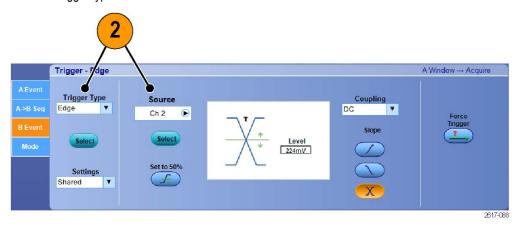

Note: B-Event Scan is not available on MSO5000B and DPO5000B instruments.

Trig on nth Event captures the nth B-Event that occurs after the A-Event for all acquisitions. B-Event scan automatically advances the B-Event value to capture different portions of the signal.

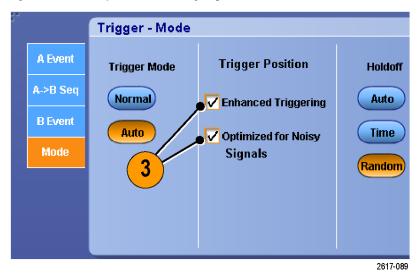

1. Set the A trigger type and source in the A Event tab.

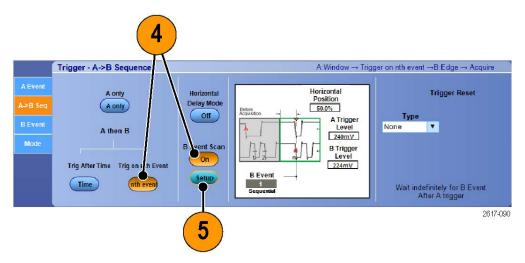

2. Set the B trigger type and source in the B Event tab.

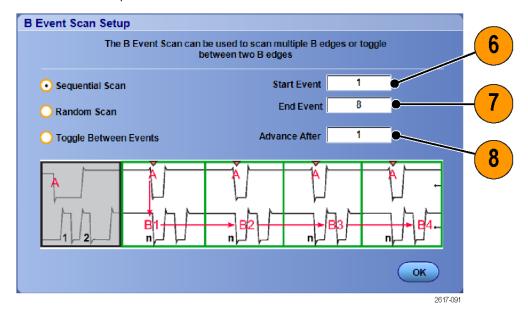

3. To more accurately place the trigger on the display, click **Enhanced Triggering**. To more accurately place the trigger on noisy signals, also click **Optimized for Noisy Signals**.

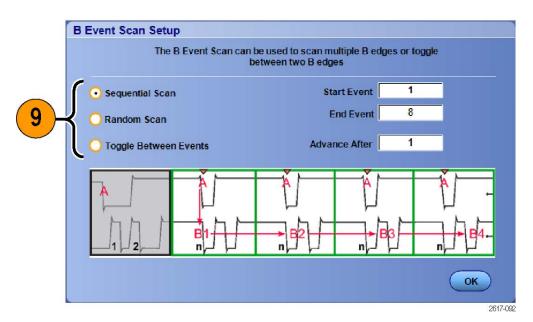

- 4. Select Trig on nth Event and B Event Scan in the A>B Seq tab.
- 5. To display the B Event Scan Setup window, press **B Event Scan Setup**.

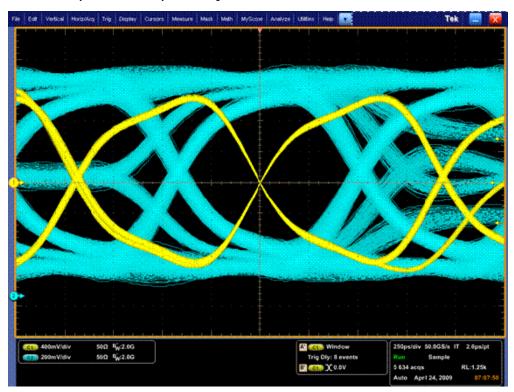

- 6. Set the B Event start value.
- 7. Set the B Event ending value.
- 8. Set the number of acquisitions before the B Event value is incremented.

- 9. Select the method that the B Event value is incremented after the selected number of acquisitions occur:
 - **Sequential Scan** increments by 1 until the End Event is reached. When the End Event is reached, the B Event value is reset to the Start Event value and the process starts over.
 - Random Scan sets the B Event value to a random value between the Start Event and the End Event for each set of Advance After acquisitions.
 - Toggle Between Events toggles the B Event value between the Start Event and the End Event for each set of Advance After acquisitions.

- **10.** In this example, a DDR3 DQS signal is on Ch 1 and the DQ signal is on Ch 2. The instrument is in Run Mode with Display Mode set to Infinite Persistence. The instrument trigger setup was as follows:
 - A-Event Window trigger on Ch 1 to detect the DDR3 DQS Write condition.
 - B-Event Edge trigger on Either slope on Ch 1 to trigger on the DQS (clock) edges.
 - A->B Sequence set to Trig on the nth Event.
 - B Scan Enabled with Start Event = 1, End Event = 8, and Mode = Sequential.
 - The data eyes are formed by the DQ signal on Ch 2.

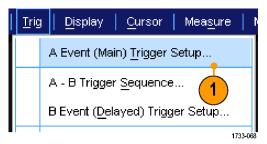

Triggering on a parallel bus

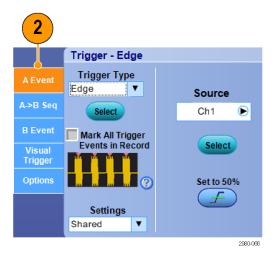

Locate the problems by triggering on a parallel bus. MSO instruments can use digital channels as components of a parallel bus.

Set up a parallel bus.(See Setting up a bus on page 64)

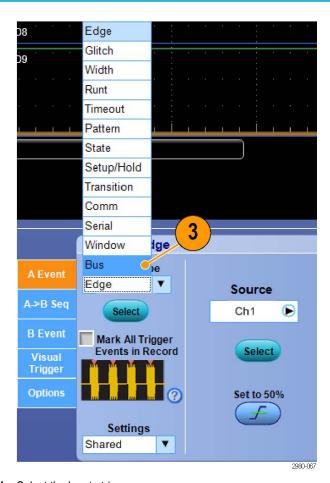

1. Select Trig > A Event (Main) Trigger Setup.

2. Select the A Event tab.

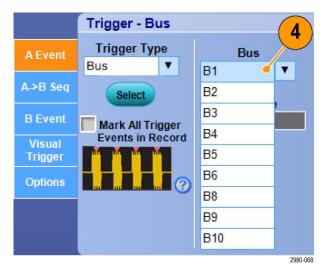

3. Select the **Bus** Trigger Type.

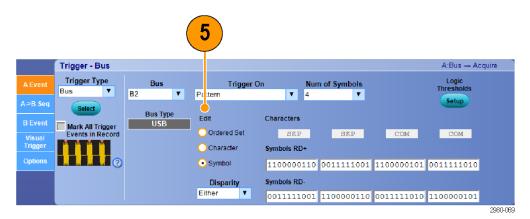

4. Select the bus to trigger on.

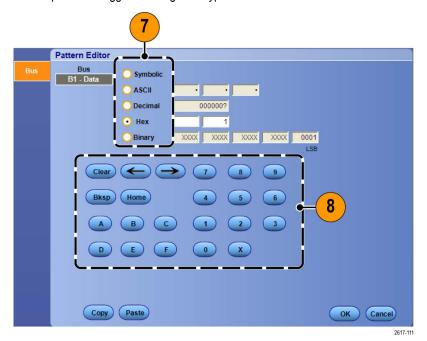

Note: Clocked buses will only appear in the drop down list if the clock source is set to Ch4.

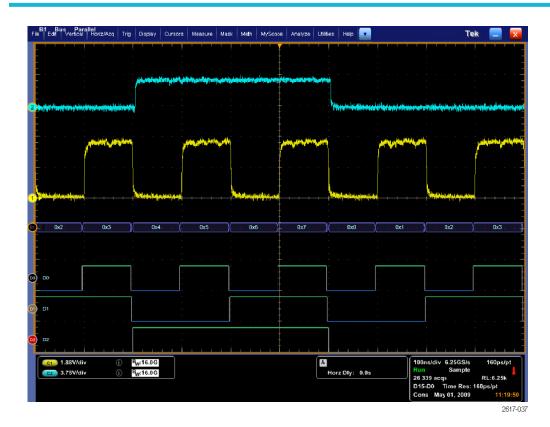

5. Click an Edit button and set the pattern and format that you want to trigger on.

- 6. Select the data format.
- 7. Set the pattern to trigger on using the keypad.

8. Analyze your waveforms.

Triggering on a serial bus

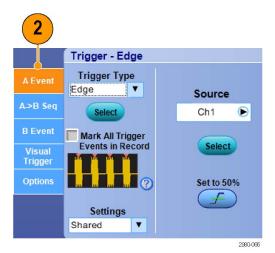

Locate problems by triggering on a serial bus. Serial buses are available on MSO70000DX, DPO70000DX, MSO5000B and DPO5000B Series instruments. Digital channels can be used in bus definitions on MSO instruments.

Setup a serial bus. (See Setting up a bus on page 64)

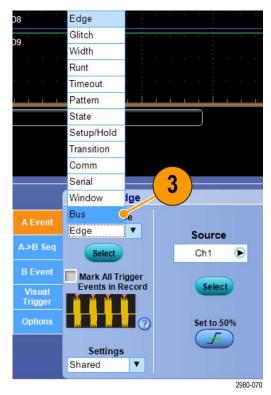

1. Select Trig > A Event (Main) Trigger Setup.

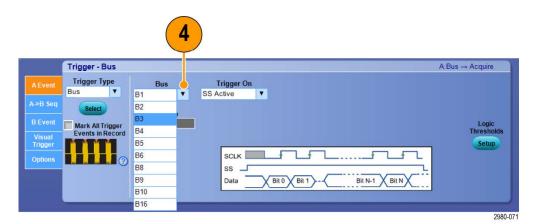

2. Select the A Event tab.

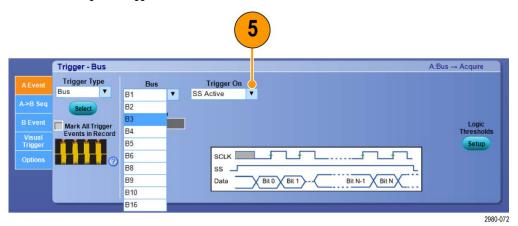

3. Select the Bus Trigger Type.

4. Select the bus.

5. Select the bus signal to trigger on.

6. Depending on your Trigger On choice and your bus type, make the required selections for the bus. See the online help for additional help setting up a bus.

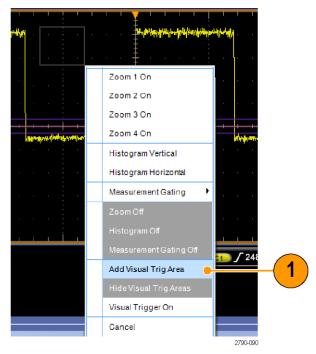

Triggering using Visual Triggers (Visual Triggering)

Visual triggering allows you to create trigger conditions directly on the display screen. (Visual Triggers are available as an option on some models.)

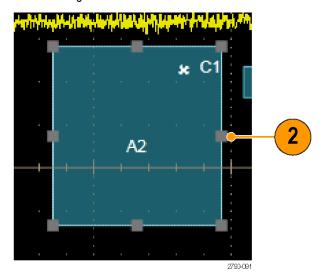

1. Create a visual trigger area by left clicking and dragging a box on the display. Then select Add Visual Trig Area from the menu.

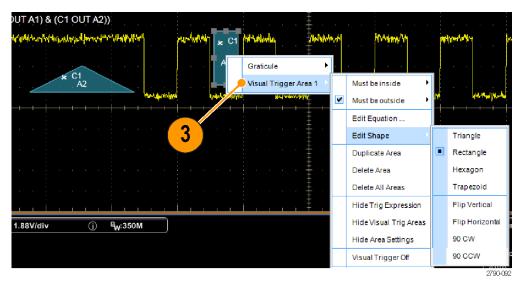

Note: This same menu allows you to hide or show all visual trigger areas and toggle visual triggering on and off.

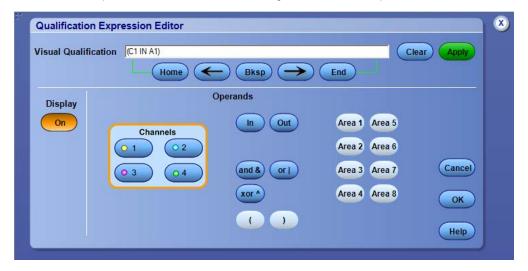

2. Click the area to enable its handles. Click and drag the area to move it to a new location. Click and drag one of the area handles to resize the area vertically, horizontally, or both.

3. Right click in the visual trigger area and select Visual Trigger Area from the menu.
Use the visual trigger menus to edit the trigger area and set conditions for the visual trigger.
Refer to online help for detailed information about creating and editing visual triggers.

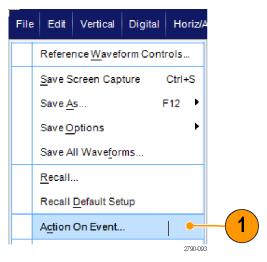

4. From the Trig menu, select Visual Trigger Setup, then double click the Visual Trigger equation.
Refer to online help for detailed information about using the Qualification Expression Editor.

Setting up Action on Event

Action on Event allows configure the oscilloscope to save a variety of files when a defined event takes place, such as a trigger events, mask test failures, and limit test failures.

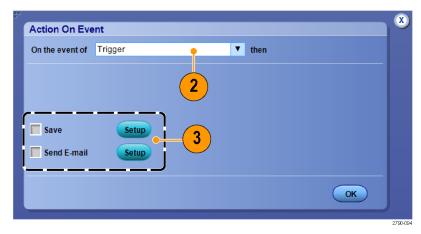

1. Select File > Action on Event..

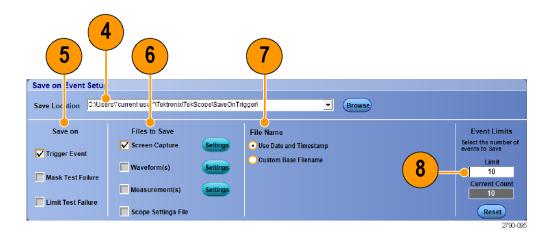

- 2. Select the event to use.
- 3. Select the action to take when the event occurs. Select Save, Send E-mail, or both.

Use the Setup button (next to Save) to display the Save on Event Setup display screen.

Use the Setup button (next to Send E-mail) to display the Send E-mail Setup display screen. (See *Setting up E-Mail on Event* on page 102)

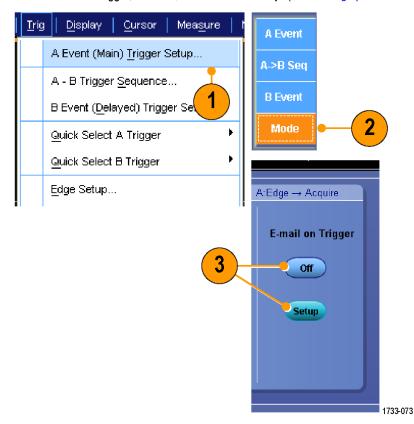

- 4. Enter the location to save the files.
- 5. Select the event that initiates a save.
- **6.** Select what type of files to save on the event.
- 7. Set the file naming convention to use.
- 8. Set the number of events to save.

Sending E-Mail on Trigger

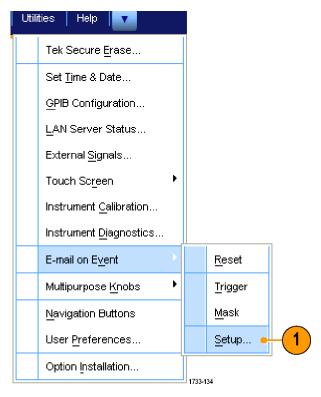

You must configure e-mail on event before performing the following procedure. (See Setting up E-Mail on Event on page 102)

- 1. Select Trig > A Event (Main) Trigger Setup.
- 2. Select the Mode tab.
- 3. Under E-mail on Trigger, click On, and then click Setup. (See Setting up E-Mail on Event on page 102)

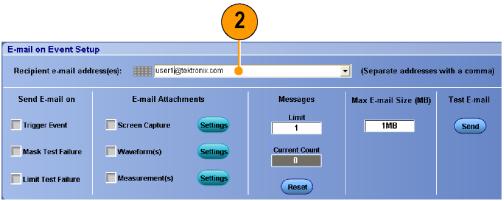

Setting up E-Mail on Event

1. Select Utilities > E-mail on Event > Setup.

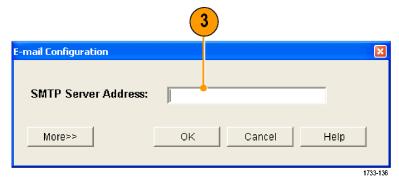

2. Enter recipients' e-mail address(es). Separate multiple entries with commas. There is a limit of 252 characters in the e-mail address box.

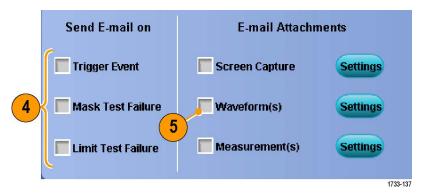

1733-135

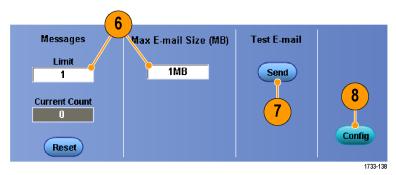

3. Click **Config**, and then enter the SMTP Server Address. Contact your network administrator for the correct address.

- 4. Select the event(s) for which you want to send an e-mail.
- 5. To include attachments, select the type of attachment, and then click Settings to specify the format.

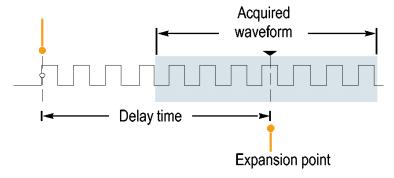

- Set the maximum message limit and e-mail size. When the maximum message limit is reached, you must click Reset to send more e-mails on event.
- 7. To verify that you have set up the e-mail addresses correctly, send a test-mail by clicking **Send**.
- 8. If necessary, click **Config** to access the e-mail configuration dialog box and adjust the configuration.

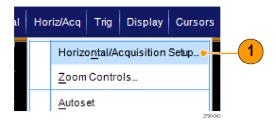

Using horizontal delay

Use horizontal delay to acquire waveform detail in a region that is separated from the trigger location by a significant interval of time.

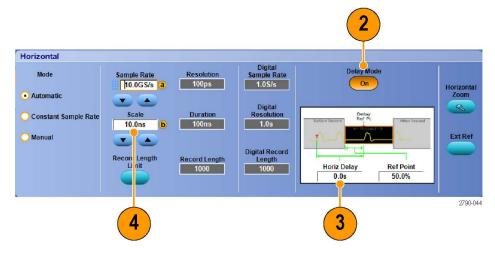

Trigger point

1. Select Horiz/Acq > Horizontal/Acquisition Setup.

- 2. Push the **Delay Mode** button to toggle delay mode on.
- 3. Adjust the delay time with the horizontal **Position** control, or enter the delay time in the control window
- 4. Adjust the horizontal Scale to acquire the detail that you need.

Quick tips

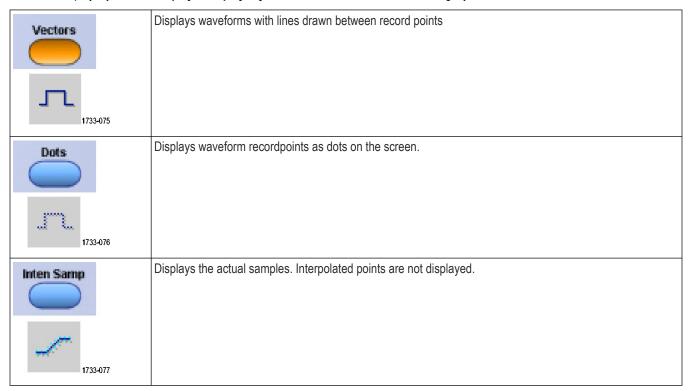

- Use MultiView Zoom and Horizontal Delay together to magnify a delayed acquisition.
- Toggle Horizontal Delay on and off to quickly compare signal details at two different areas of interest, one near the trigger location and the other centered at the delay time.

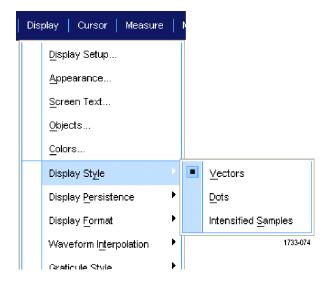

Display a waveform

This section contains concepts and procedures for displaying a waveform. Detailed information is available in the online help.

Setting the Display Style

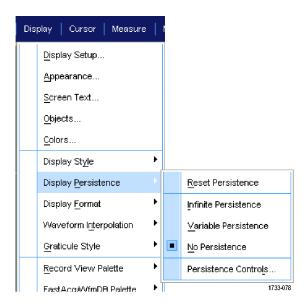

To set the display style select **Display > Display Style**, and then select one of the following styles:

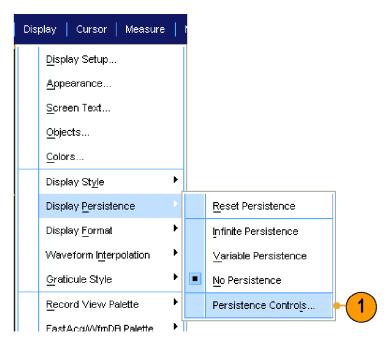

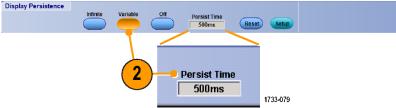

Setting the Display Persistence

Select **Display > Display Persistence**, and then select the type of persistence.

- No persistence shows record points for the current acquisition only. Each new waveform record replaces the previously acquired record for a channel.
- Infinite persistence continuously accumulates record points until you change one of the acquisition display settings. Use for displaying points that may occur outside the normal acquisition envelope.
- Variable persistence accumulates record points for a specified time interval. Each record point decays independently according to the time interval.
- Reset persistence clears the persistence.
- 1. To set the variable persistence time, select Display > Display Persistence > Persistence Controls.
- 2. Click Variable, Persist Time, and then use the multipurpose knobs to set the persistence time.

Setting the Display Format

The instrument can display waveforms in two different formats. Choose the format that best suits your needs.

Select **Display > Display Format**.

- Select YT format to show a signal amplitude as it varies over time.
- Select XY format to compare the amplitude of waveform records point by point:

The following channels are compared:

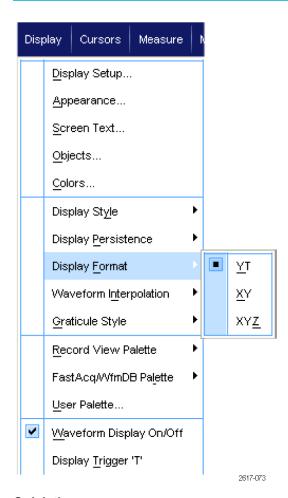

Ch 1 (X) and Ch 2 (Y),

Ch 3 (X) and Ch 4 (Y),

Ref 1 (X) and Ref 2 (Y),

Ref 3 (X) and Ref 4 (Y)

• Select XYZ format to compare the voltage levels of the Ch 1 (X) and Ch 2 (Y) waveform records point by point as in XY format. The displayed waveform intensity is modulated by the Ch 3 (Z) waveform record. XYZ format is triggered. A -5 division signal (including position and offset) on Ch 3 produces a blank screen; a +5 division signal produces full intensity.

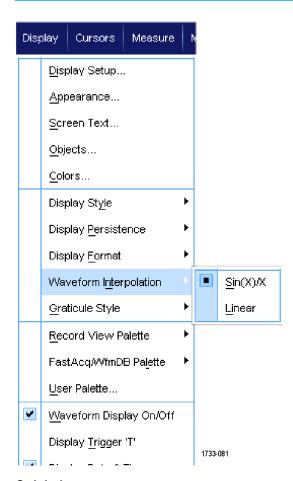

Quick tips

- XY format is particularly useful for studying phase relationships such as Lissajous Patterns.
- XY format is a dot-only display, although it can have persistence. The Vector style selection has no effect when you select XY format.

Selecting the Waveform Interpolation

Select **Display > Waveform Interpolation**, and then select one of the following:

- Sin(X)/X interpolation computes record points using a curve fit between the actual samples acquired.
- Linear interpolation computes record points between actual acquired samples by using a straight line fit.

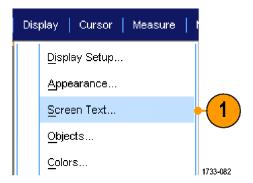

Quick tips

Sin(X)/X interpolation is the default interpolation mode. It requires fewer actual sample points than linear interpolation to accurately represent the waveform.

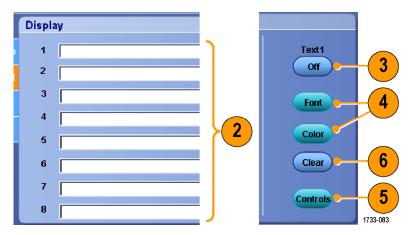

Adding Screen Text

1. Select Display > Screen Text.

- 2. Enter up to eight independent lines of text.
- 3. Click Text Off or On to turn the text display on and off.
- 4. Click Font or Color to select the font and color of the screen text.
- 5. Click **Controls** to open the Text Properties control window for positioning of the text on the display.

6. Click Clear to erase the entire text of the selected line.

Quick tips

- Click and drag screen text to reposition it on the screen.
- You can also label waveforms and buses. (See Setting up digital channels.) (See Setting up a bus.)

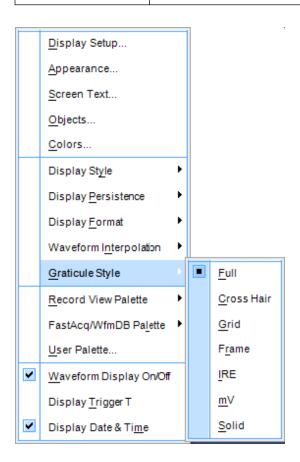

Setting the Graticule Style

To set the graticule style, select **Display > GraticuleStyle**, and then select one of the following styles:

Full 1733-085	Use for quick estimate of waveform parameters.
Grid 1733-086	Use for full-screen measurements with cursors and automatic readouts when cross-hairs are not needed.
Cross Hair	Use for making quick estimates of waveforms while leaving more room for automatic readouts and other data.
Frame 1733-088	Use with automatic readouts and other screen text when display features are not needed.
1733-201	Use for NTSC video signals.
mV 1733-202	Use for video signals other than NTSC.
Table continued	

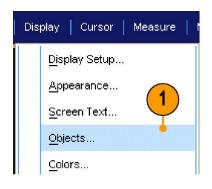

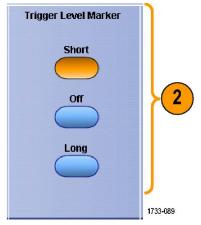

Solid is similar to Full, but the grid, cross hairs, and frame are drawn using solid lines.

Setting the Trigger Level Marker

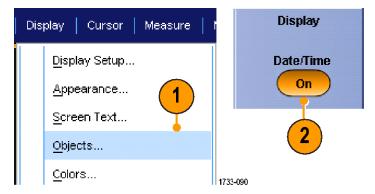

- 1. Select **Display > Objects**.
- 2. Select one of the following:
 - Short displays a short arrow on the side of the graticule.
 - Long displays a horizontal line across the graticule.
 - · Off turns off the trigger level marker.

Displaying the Date and Time

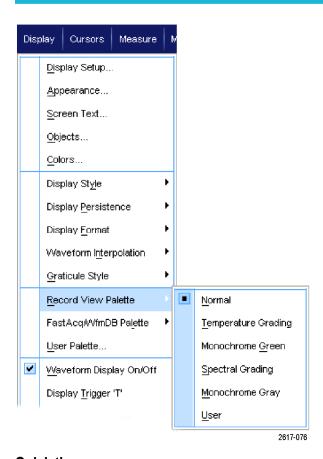

- 1. Select Display > Objects.
- 2. Toggle the display of the date and time on the graticule. Use the Utilities menu to set the date and time.

Using the Color Palettes

Select **Display** > **Record View Palette** or **FastAcq/WfmDB Palette**, and then select one of the following color schemes for the waveform and graticule:

- Normal displays hues and lightness levels for best overall viewing. The color of each channel waveform matches the color of the corresponding front-panel vertical knob.
- Monochrome Green displays areas of the waveform with the highest sample density in lighter green shades. The areas of lowest sample density appear in darker green shades. It most closely resembles analog oscilloscope displays.
- Spectral Grading displays areas of the waveform with the highest sample density in blue shades. The areas of lowest sample density
 appear in red shades.
- Monochrome Gray displays areas of the waveform with the highest sample density in lighter gray shades. The areas of the lowest sample density appear in darker gray shades.
- · User displays the waveform in a user-defined color.

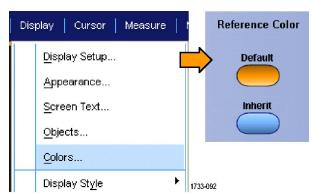

Quick tips

- Choose one of the color grading palettes in the Display > Colors control window to see different sample densities represented in different colors.
- There are two color palettes, one for Record View and one for FastAcq/WfmDB.

Setting reference waveform colors

Select **Display > Colors**, and then select one of the following:

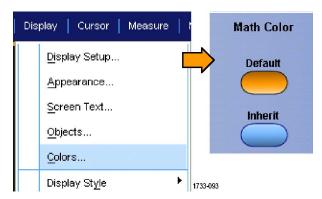

- Default uses the default system color for reference waveforms.
- Inherit uses the same color for the reference waveform as the original waveform.

Setting Math Waveform Colors

Select **Display > Colors**, and then select one of the following:

- Default uses the default system color for math waveforms.
- · Inherit uses the same color for the math waveform as the lowest numbered channel waveform the math function is based on.

Quick tips

The default color for math and reference waveforms are different for each waveform.

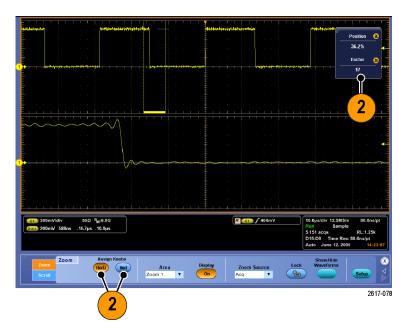

Using MultiView Zoom

Use the MultiView Zoom function to magnify a waveform vertically, horizontally, or in both dimensions. Zoomed waveforms can also be aligned, locked, and automatically scrolled. Scale and Position affect only the display, not the actual waveform data.

1. If MultiView Zoom is off, push MultiView Zoom to split the screen and add a zoom graticule.

2. Push **Horiz** or **Vert** to select which axis to magnify in the zoom graticule. Use the multipurpose knobs to adjust scale and position of the magnified waveform.

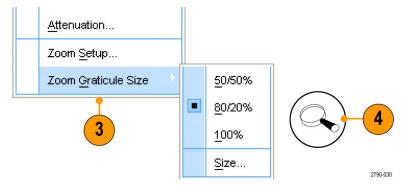

In this example the main graticule is the top half of the graticule and the zoomed graticule is the bottom half of the graticule.

Note: You can hide or display zoomed waveforms by pressing Show/Hide Waveforms and then checking which zoomed waveforms to display.

- 3. To adjust the zoom graticule size, select Zoom Graticule Size from either the Vertical or Horiz/Acq menus.
- 4. If MultiView Zoom is on but the readouts are not attached to the zoom controls, press the MultiView Zoom button to attach the readouts to the zoom controls.

Press the MultiView Zoom button again to turn zoom off.

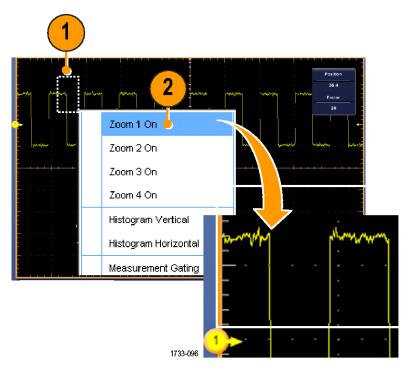

Quick tips

- Use the Zoom Setup menu to change the graticule size of the zoomed waveform.
- Use Wave Inspector to manage long record length waveforms. (See page Using Wave Inspector to manage long record length waveforms.)

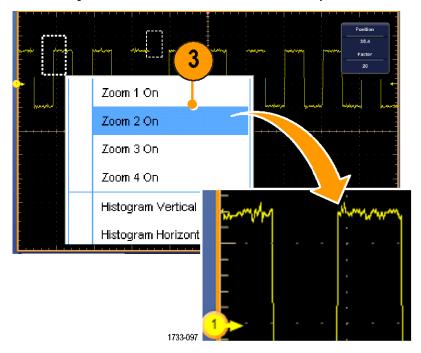

Zooming in multiple areas

When you want to view and compare multiple areas of one record at the same time, use the following procedure.

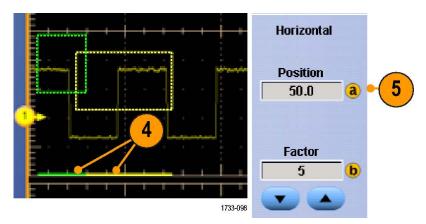

- 1. Click and drag a box around the area of the waveform that you want to zoom.
- 2. Select Zoom 1 On.

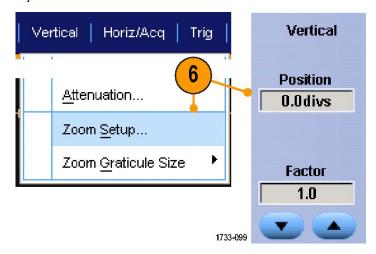

3. Click and drag a box around another area of the waveform that you want to zoom, and then select **Zoom 2 On**.

- 4. To adjust the zoomed area horizontally, click the horizontal marker below the Zoom box to select the zoomed area.
- **5.** Use the multipurpose knobs to adjust the horizontal position and factor of the selected zoom area.

6. To adjust the zoomed area vertically, select **Vertical > Zoom Setup...**, click a vertical field, and then use the multipurpose knobs to adjust the Vertical Position and Fact.

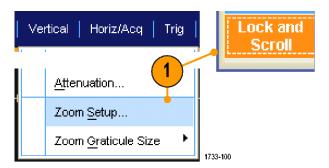

Quick tips

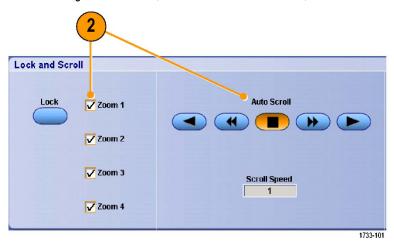

- To clear the zoom area, click Position Factor Reset from the Zoom Setup control window. Turn each zoom display on and off from the Zoom Setup control window.
- Turn each zoom display on and off from the Zoom Setup control window.
- Push the MultiView Zoom button once or twice to toggle all zoom displays on and off.
- To reposition the zoomed area horizontally, click and drag the horizontal marker at the bottom of the zoom box.
- Use Wave Inspector to manage long record length waveforms. (See Using Wave Inspector to manage long record length waveforms on page 120)

Lock and Scroll zoomed waveforms

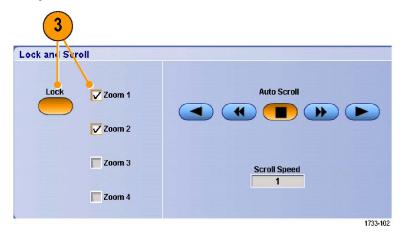

Click Zoom Setup... from either the Vertical or Horiz/Acq menu, and select the Lock and Scroll tab.

• To scroll a single zoomed area, select a **Zoom 1-4** check box, and click an Auto Scroll button.

To scroll multiple zoomed areas simultaneously, click Lock, and select the Zoom1-4 check boxes that you want to scroll through.
 Locking the zoomed areas locks in their relative horizontal position. Changing the horizontal position of one locked and zoomed area changes them all.

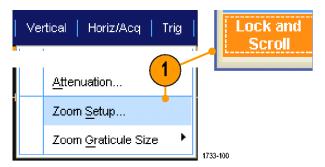

Quick tips

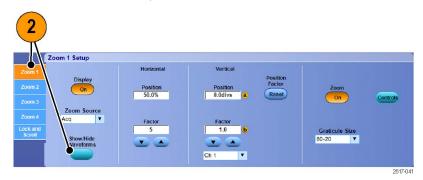

When multiple zoom areas are selected but not locked, the zoom area with the highest number will autoscroll, while the other zoom areas remain stationary.

Hide waveforms in the zoomed window

1. To hide or view waveforms, select **Zoom Setup...** from either the Vertical or Horiz/Acq menu.

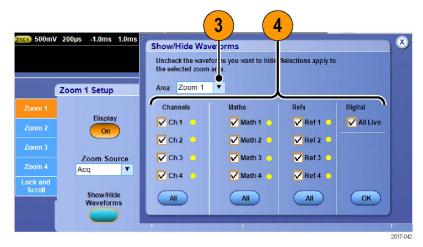

2. Click a Zoom tab, and then press Show/Hide Waveforms.

- 3. Select the zoomed area that contains the waveform you want to show or hide.
- 4. Uncheck the channel, math, reference, or digital waveform you want to hide.

Digital channels are only available on MSO Series instruments.

Using Wave Inspector to manage long record length waveforms

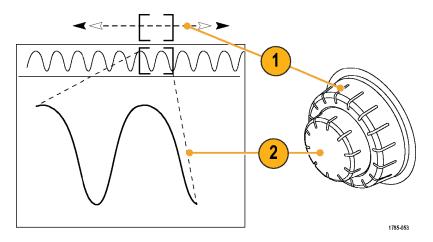

The Wave Inspector controls (Pan/Zoom, play/pause, Mark, Search) help you to efficiently work with long record length waveforms. To magnify a waveform horizontally, turn the Zoom knob. To scroll through a zoomed waveform, turn the Pan knob.

Note: Wave inspector is available on MSO5000B and DPO5000B Series instruments.

The Pan-Zoom Control consists of:

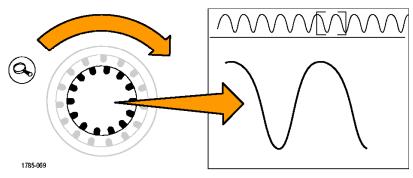

- 1. An outer pan knob
- 2. An inner zoom knob

Zooming a waveform

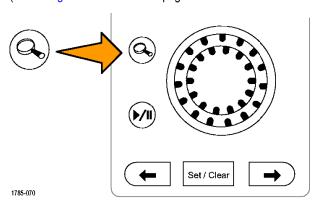

To use zoom:

1. Rotate the inner knob on the Pan-Zoom control clockwise to zoom in on a selected part of the waveform. Rotate the knob counterclockwise to zoom back out.

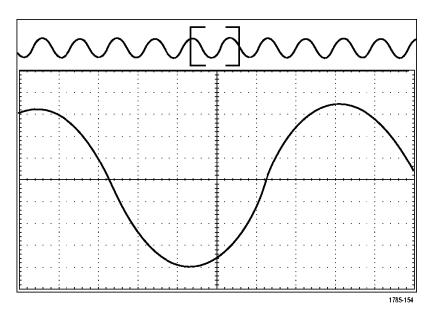

2. Alternatively, enable or disable the zoom mode by pushing the zoom button once or twice.

(See Using MultiView Zoom on page 115

3. Examine the zoomed view of the waveform that appears on the larger, lower part of the display. The upper part of the display will show the position and size of the zoomed part in the waveform, within the context of the overall record.

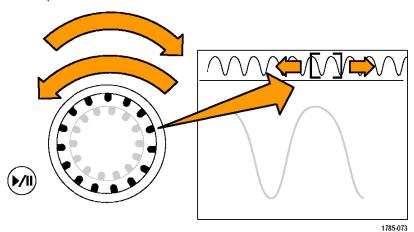

Panning a waveform

While the zoom feature is on, use the pan feature to quickly scroll through the waveform. To use pan:

1. Rotate the pan (outer) knob of the pan-zoom controls to pan the waveform.

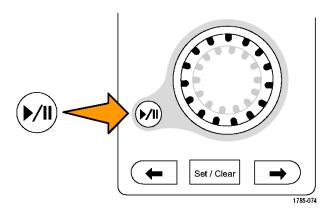

Turn the knob clockwise to pan forward. Turn it counterclockwise to pan backward. The further you turn the knob, the faster the zoom window pans.

Playing and pausing a waveform

Use the play-pause feature to automatically pan through a waveform record. To use it:

- 1. Enable the **Play-Pause** mode by pushing the play-pause button.
- 2. Adjust the play speed by turning the pan (outer) knob further. The further you turn it, the faster it goes.
- 3. Change the play direction by reversing the direction that you are turning the pan knob.
- 4. During play, up to a point, the more you turn the outer knob, the faster the waveform accelerates. If you rotate the outer knob as far as it can go, the play speed does not change, but the zoom box quickly moves in that direction. Use this maximum rotation feature to replay a part of the waveform that you just saw and want to see again.
- 5. Pause the play-pause feature by pushing the Play-Pause button again.

Searching and marking waveforms

You can mark locations of interest in the acquired waveform. These marks help you limit your analysis to particular regions of the waveform. You can mark areas of the waveform automatically, if they meet some special criteria, or you can manually mark each item of interest. You can jump from mark to mark (area of interest to area of interest). You can automatically search and mark many of the same parameters that you can trigger on. Many search parameters do not have the time limits as triggers. You can search on math and reference waveforms. You can find all of the acquired events of a certain type.

Search marks provide a way to mark a waveform region for reference. Set marks automatically with search criteria. Search for and mark regions with particular edges, pulse widths, runts, logic states, rise/fall times, setup and hold violations, and bus search types.

Search and Mark do not support digital waveforms.

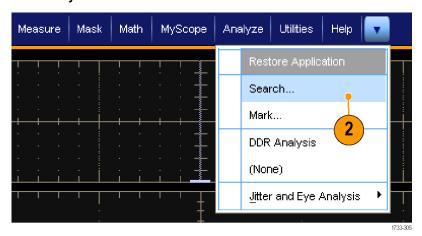

To manually set and clear (delete) marks:

1. Turn on Multiview Zoom. Zoom 1 is used with marks.

(See Using MultiView Zoom on page 115

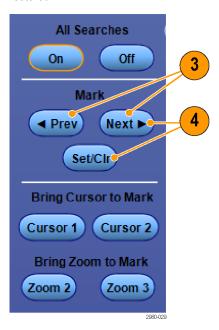

2. Select Analyze > Search.

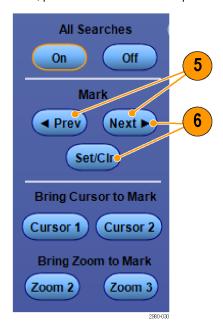

- Move (the zoom box) to the area on the waveform where you want to set (or clear) a search mark by turning a multipurpose knob.
 Push the Next (→) or Prev (←) arrow button to jump to an existing mark.
- 4. Push Set Cir or the front panel Set/Clear button.

If no search mark is at the screen center, the instrument will add one.

When a mark is created, the horizontal zoom factor is saved. When you use Next or Prev to move between marks, the zoom factor is restored.

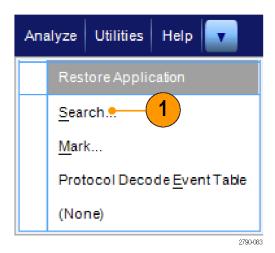

- 5. Investigate your waveform by moving from search mark to search mark. Use the Next (→) or Prev (←) arrow button to jump from one marked location to another, without adjusting any other controls.
- **6.** Delete a mark. Push the Next (→) or Prev (←) arrow button to jump to the mark you want to clear. To remove the center-positioned mark, push the **Set Cir** or the front panel **Set/Clear** button. It works on both manually and automatically created marks.

To automatically set and clear (delete) search marks:

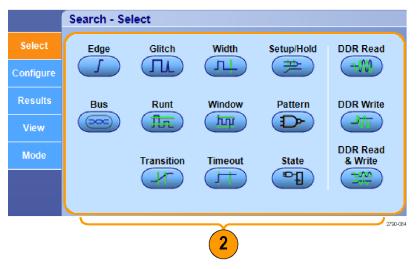

1. Push Search or select Analyze > Search.

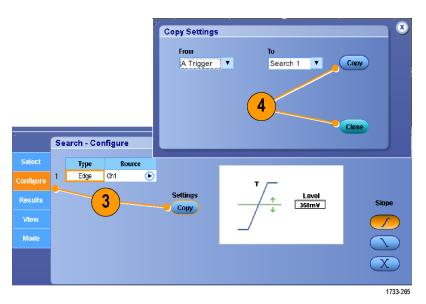

2. Select the desired search type from the menu.

The search menu is similar to the trigger menu.

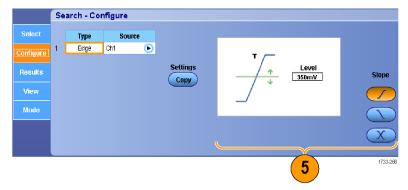

Serial bus searches are optional.

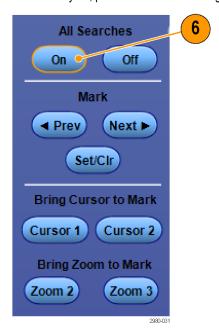

- 3. Set up your search from the Configure tab. To copy the trigger setup or a search setup, press Settings Copy.
- **4.** From the Copy Settings window, select where to copy the settings from and where to copy the settings to. Press Copy and then Close.

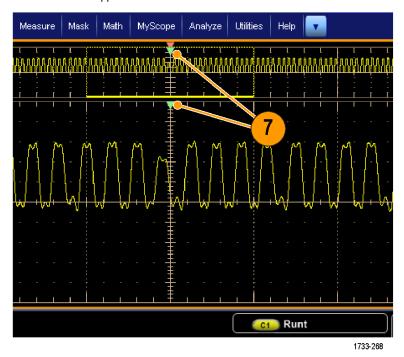

5. To modify the current search setup, adjust the displayed controls. Displayed controls vary depending on the selected search.

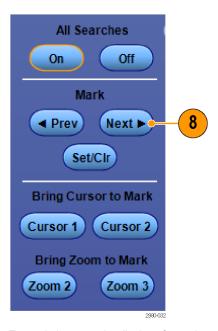

6. If not already on, press **All Searches** to toggle search to on.

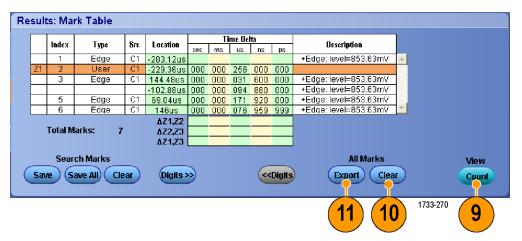

7. On the screen, triangles show the location of automatic marks and triangles with a white outline show the custom (user-defined) locations. These appear on both normal and zoomed waveform views.

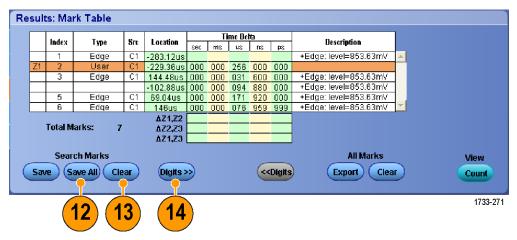

3. Quickly investigate your waveform by moving from mark to mark with the Next (→) or Prev (←) arrow button. No other adjustments are needed.

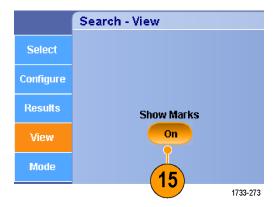

- 9. To toggle between the display of search events counts or Marks time, select the **Results** tab and press View **Count.**
- 10. To clear all marks from the table, press All Marks Clear.
- 11. To export the Mark Table to a file, press All Marks Export.

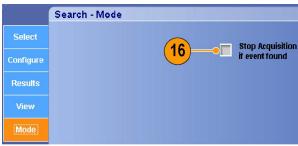

- 12. To convert a mark or all marks to user marks, press Search Marks Save or Save All.
- 13. To remove the currently highlighted row from the Mark Table, press Search Marks Clear.
- 14. To toggle between showing mark locations in engineering notation or in high precision form, press Digits.

15. To toggle the display of mark triangles on and off, select the View tab and press Show Marks.

To stop acquisitions if a match is found, select the Mode tab and check Stop Acquisition if event found.

1733-272

Quick tips

- Search is performed only on acquired data. Set up the instrument to acquire the data you are searching for.
- Set the sample rate so the search event is discernible. You can search for a glitch that is wider than a couple of sample intervals.
- You can copy trigger settings to search for other locations in your acquired waveform that meet the trigger conditions. You can copy search settings to your trigger.
- Edge search marks are created without zoom factors. Other search types create marks with an appropriate zoom factor.
- Pressing Bring Zoom to Mark Zoom 2 or Zoom 3 displays the corresponding zoom view with the same zoom parameters as Zoom 1.
- · Custom (User) marks are saved with the waveform when the waveform is saved and when the setup is saved.
- Automatic search marks are not saved with the waveform when the waveform is saved. However, the search criteria are saved in the saved setup, so you can easily recapture the marks by reusing the search function.

Search includes the following search capabilities:

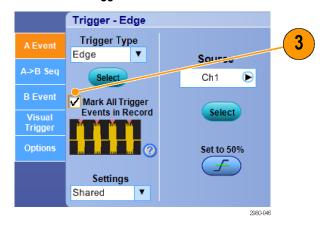

Search	Description
Edge	Searches for edges (rising or falling) with a user-specified threshold level.
Glitch	Searches for pulses narrower (or wider) than the specified width, or ignores glitches narrower (or wider) than the specified width.
Width	Searches for positive or negative pulse widths that are >, <, =, or ≠ a user-specified pulse width.
Setup & Hold	Search for violations of user-specified setup and hold times.
Runt	Searches for positive or negative pulses that cross one amplitude threshold but fail to cross a second threshold before crossing the first again. Search for all runt pulses or only those with a duration $>$, $<$, $=$, or \neq a user-specified time.
Window	Searches for a signal that is entering or leaving the threshold window. Qualify the search in terms of time by using the When Wider option, or by the logical state of other channels using the When Logic option.
Pattern	Search for a logic pattern (AND, OR, NAND, or NOR) across multiple waveforms with each input set to either High, Low, or Don't Care. Search for when the event goes true, goes false, or stays valid for >, <, =, or ≠ a user-specified time. Additionally, you must define one of the inputs as a clock for synchronous (state) searches.
Transition	Search for rising and/or falling edges that are >, <, =, or ≠ a user-specified time.
Timeout	Searches for no pulse in a specified time.
State	Searches for when all of the logic inputs to the selected logic function cause the function to be True or False when the clock input changes state.
DDR Read	Searches for DDR read pulses. Requires option DDRA
DDR Write	Searches for DDR write pulses. Requires option DDRA.
DDR Read and Write	Searches for DDR read and write pulses. Requires option DDRA.
Table continued	·

Search	Description
Bus	Parallel: Search for a binary or hex value.
	I ² C: Search for Start, Repeated Start, Stop, Missing Ack, Address, Data, or Address and Data.
	SPI: Search for SS Active, MOSI, MISO, or MOSI & MISO.
	CAN: Search for Start of Frame, Type of Frame (Data, Remote, Error, Overload), Identifier (standard or extended), Data, Identifier and Data, End of Frame, or Missing Ack, Bit Stuffing Error.
	RS-232, RS-422, RS-485, UART: Search for Tx Start Bit, Rx Start Bit, Tx End of Packet, Rx End of Packet, Tx Data, Rx Data, Tx Parity Error, Rx Parity Error.
	LIN: Search for Sync, Identifier, Data, ID & Data, Wakeup Frame, Sleep Frame, Error.
	FlexRay: Search for Start of Frame, Type of Frame, Identifier, Cycle Count, Header Fields, Data, ID & Data, End of Frame, Error.
	Ethernet: search for Start of Frame, MAC Addresses, Q-Tag Control Information, MAC Length/Type/Data, IPv4Header, TCP Header, TCP/IPv4 Client Data, End of Packet, and FCS Error.
	PCle: search for Pattern, Character/Symbol, Long Ordered Set Error, and Any Control Character.
	8b/10b: search for Pattern, Character/Symbol, Error, and Any Control Character.
	MIPI: search for Stop, Start/End of Transmission, Bus Turn Around, Escape Mode, Warning, Error, and Short/Long Packet.
	MIL-STD-1553: search for Sync, Command/Status Word, Data, RT/IMG Time, and Error.
	Custom: search using your custom decoder.
	USB: Search for Sync, Reset, Suspend, Resume, End of Packet, Token (Address) Packet, Data Packet, Handshake Packet, Special Packet, Error, Pattern, Character/Symbol, Long Ordered Set, Packets, LFPS, or Any Control Character.

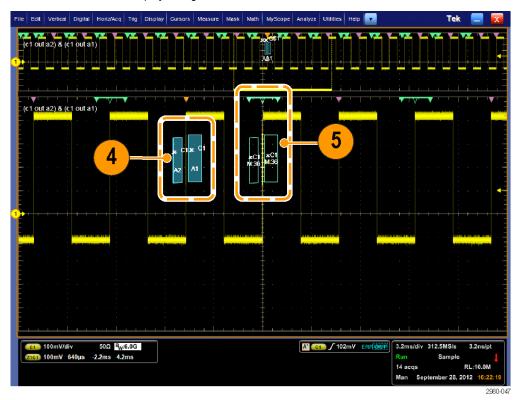

Using a visual search

A visual search is performed with the same settings as the main trigger. The results of a visual search are displayed as marks with a color distinct from those of an Analyze search. Do the following steps to set up a visual search.

- 1. Set up pin point triggers. (See Choosing a trigger type on page 82)
- 2. Set up a visual trigger. (See Triggering using Visual Triggers (Visual Triggering) on page 98
- 3. Click Mark All Trigger Events in Record.

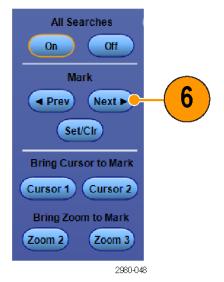

- 4. Visual Trigger areas are displayed in blue.
- 5. Visual Search areas are displayed in green.

6. Only the active visual search area is displayed. Press the Mark **Next** and the Mark **Prev** buttons to move the active area to other visual search areas.

Use the other Analyze Search control windows to control or view the results of the Visual Search.

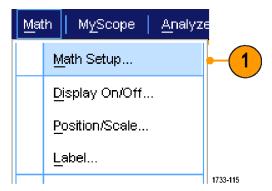

Analyzing waveforms

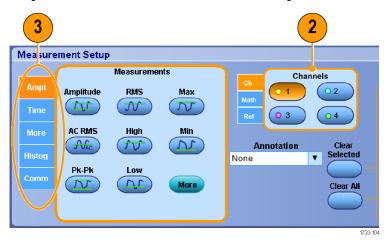

Your instrument features cursors, automatic measurements, statistics, histograms, math, spectral analysis, and advanced pass/failtests to help you to analyze waveforms. This section contains concepts and procedures for analyzing waveforms. Detailed information is available in the online help.

Taking automatic measurements

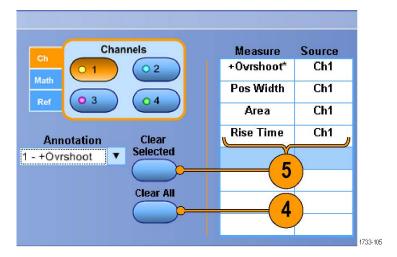

1. Select Measure > Measurement Setup....

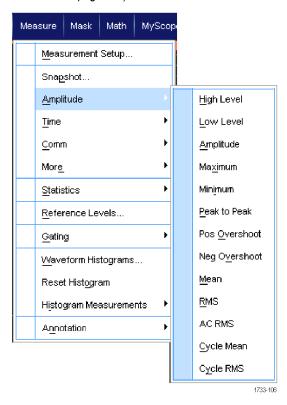

- 2. Select the channel, math or reference waveform that you want to measure.
- 3. Using the tabs, select measurements in five different categories.

- 4. To remove all measurements, click Clear All.
- 5. To remove multiple measurements, click and drag to select the measurements, and then click Clear Selected.

You can also choose a measurement for the selected waveform directly in the Measure menu. (See *Automated measurement selections* on page 134)

Quick tips

- Automatic measurements are available for digital channel waveforms by using DPOJET. Only measurements appropriate to digital
 waveforms are available. On MSO70000DX instruments you can take a measurement of a digital channel waveform by first sending
 the digital channel to an analog channel using iCapture. (See Viewing analog characteristics of digital waveforms on page 72)
- In roll mode, measurements are not available until after you stop the acquisition.

WARNING:

If there is vertical clipping, there may be a dangerous voltage on the probe tip, but the readout will indicate a low voltage. A symbol appears in the measurement readout if a vertical clipping condition exists. Automatic amplitude-related measurements

where the signal is vertically clipped produce inaccurate results. Clipping also causes inaccurate amplitude values in waveforms that are stored or exported for use in other programs. If a math waveform is clipped, it will not affect amplitude measurements on that math waveform.

Automated measurement selections

The following tables list each automated measurement by category: amplitude, time, histogram, communication, or more. (See *Taking automatic measurements* on page 132.)

Amplitude measurements

Measurement	Description
Description	The high value less the low value measured over the entire waveform or gated region.
High	This value is used as 100% whenever high reference, mid reference, or low reference values are needed, such as in fall time or rise time measurements. It is calculated using either the min/max or histogram method. The min/max method uses the maximum value found. The histogram method uses the most common value found above the midpoint. This value is measured over the entire waveform or gated region.
Low	This value is used as 0% whenever high reference, mid reference, or low reference values are needed, such as in fall time or rise time measurements. It is calculated using either the min/max or histogram method. The min/max method uses the minimum value found. The histogram method uses the most common value found below the midpoint. This value is measured over the entire waveform or gated region.
RMS	The true Root Mean Square voltage over the entire waveform or gated region.
AC RMS	The true Root Mean Square voltage over the measurement region.
Max	The most positive peak voltage. Max is measured over the entire waveform or gated region.
Min	The most negative peak voltage. Min is measured over the entire waveform or gated region.
Pk-Pk	The absolute difference between the maximum and minimum amplitude in the entire waveform or gated region.
Cycle RMS	The true Root Mean Square voltage over the first cycle in the waveform or the first cycle in the gated region.
+Overshoot	This is measured over the entire waveform or gated region and is expressed as: Positive Overshoot = ((Maximum - High) / Amplitude) x 100%.
-Overshoot	This is measured over the entire waveform or gated region and is expressed as: Negative Overshoot = ((Low - Minimum) / Amplitude) x 100%.
Mean	The arithmetic mean over the entire waveform or gated region.
Cycle Mean	The arithmetic mean over the first cycle in the waveform or the first cycle in the gated region.

Time measurements

Measurement	Description
Rise Time	The time required for the leading edge of the first pulse in the waveform or gated region to rise from the low reference value (default = 10%) to the high reference value (default = 90%) of the final value.
Fall Time	The time required for the falling edge of the first pulse in the waveform or gated region to fall from the high reference value (default = 90%) to the low reference value (default = 10%) of the final value.
Pos Width	The distance (time) between the mid reference (default 50%) amplitude points of a positive pulse.
	The measurement is made on the first pulse in the waveform or gated region.
Neg Width	The distance (time) between the mid reference (default 50%) amplitude points of a negative pulse.
	The measurement is made on the first pulse in the waveform or gated region.
+ Duty Cyc	The ratio of the positive pulse width to the signal period expressed as a percentage. The duty cycle is measured on the first cycle in the waveform or gated region.
- Duty Cyc	The ratio of the negative pulse width to the signal period expressed as a percentage. The duty cycle is measured on the first cycle in the waveform or gated region.
Period	The time required to complete the first cycle in a waveform or gated region. Period is the reciprocal of frequency and is measured in seconds.
Freq	The frequency of the first cycle in a waveform or gated region. Frequency is the reciprocal of the period; it is measured in Hertz (Hz) where one Hz is one cycle per second.
Delay	The time between the mid reference (default 50%) amplitude point of two different waveforms.

More measurements

Measurement	Description
Area	The area over the entire waveform or gated region in volt-seconds. Area measured above ground is positive; area measured below ground is negative.
Cycle Area	The area over the first cycle in the waveform or the first cycle in the gated region expressed in volt-seconds. The area above the common reference point is positive while the area below the common reference point is negative.
Phase	The amount of time that one waveform leads or lags another waveform, expressed in degrees where 360° contains one waveform cycle.
Burst Width	The duration of a burst (a series of transient events) and is measured over the entire waveform or gated region.

Histogram measurements

Measurement	Description
Wfm Ct	Displays the number of waveforms that have contributed to the histogram.
Hits in Box	Displays the number of points in or on the histogram box.
Table continued	

Measurement	Description
Peak Hits	Displays the number of points in the largest bin of the histogram.
Median	Displays the middle point of the histogram box. Half of all acquired points within or on the histogram box are less than this value and half are greater than this value.
Max	Displays the voltage of the highest nonzero bin in vertical histograms or the time of the rightmost nonzero bin in the horizontal histograms.
Min	Displays the voltage of the lowest nonzero bin in vertical histograms or the time of the leftmost nonzero bin in the horizontal histograms.
Pk-Pk	Displays the peak-to-peak value of the histogram. Vertical histograms display the voltage of the highest nonzero bin minus the voltage of the lowest nonzero bin. Horizontal histograms display the time of the rightmost nonzero bin minus the time of the leftmost nonzero bin.
Mean	Measures the average of all acquired points within or on the histogram box.
Std Dev	Measures the standard deviation (Root Mean Square (RMS) deviation) of all acquired points within or on the histogram box.
Mean ±1 Std Dev	Displays the percentage of points in the histogram that are within one standard deviation of the histogram mean.
Mean ±2 Std Dev	Displays the percentage of points in the histogram that are within two standard deviations of the histogram mean.
Mean ±3 Std Dev	Displays the percentage of points in the histogram that are within three standard deviations of the histogram mean.

Communication measurements

Measurement	Description
Ext Ratio	The ratio of eye top to base. This measurement only works for waveform database or a reference waveform saved in waveform database mode.
Ext Ratio %	The ratio of eye top to base expressed as a percentage. This measurement only works for waveform database or a reference waveform saved in waveform database mode.
Ext Ratio (dB)	The ratio of eye top to base expressed in decibels. This measurement only works for waveform database or a reference waveform saved in waveform database mode.
Eye Height	The measurement of the eye height in volts.
Eye Width	The measurement of eye width in seconds.
Eye Top	The top value used in the extinction ratio measurements.
Eye Base	The base value used in the extinction ratio measurements.
Crossing %	The eye crossing point expressed as a percentage of eye height.
Jitter P-P	The peak-to-peak value for the edge jitter in the current horizontal units.
Jitter RMS	The RMS value of the edge jitter in the current horizontal units.
Jitter 6 Sigma	Six times the RMS value of the edge jitter in the current horizontal units.
Noise P-P	The peak-to-peak value of the noise of the top or base of the signal as specified by you.
Noise RMS	The RMS value of the noise of the top or base of the signal as specified by you.
S/N Ratio	The ratio of the signal amplitude to the noise of the top or base of the signal as specified by you.
Table continued	'

Measurement	Description
"	The peak-to-peak time variation of the first eye crossing measured at the Mid Ref as a percent of the eye period.
Q-Factor	The ratio of eye size to noise.

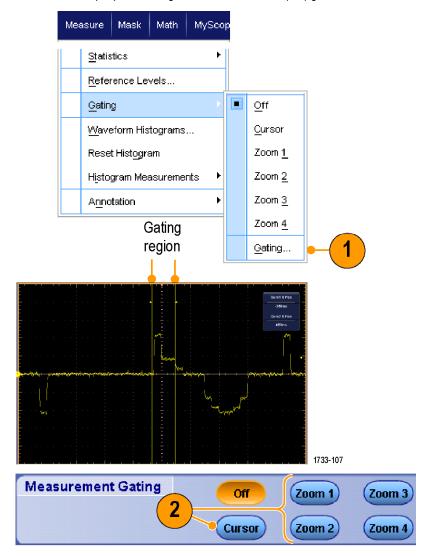

Customizing an automatic measurement

Customize automatic measurements by using gating, modifying measurement statistics, or adjusting the measurement reference levels.

Gating

Use Gating to confine the measurement to a certain part of a waveform.

- 1. Select Measure > Gating > Gating
- 2. Position the gates by doing one of the following:
 - Click **Cursor** to set the gated area to the area between the cursors.
 - Click **Zoom (1-4)** to set the gated area to the Zoom (1-4) graticule.

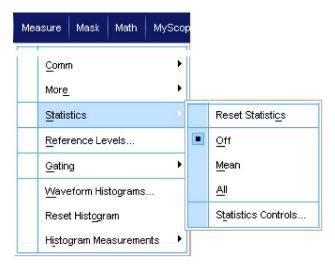

Statistics

Statistics turn on automatically with measurements. Statistics characterize the stability of the measurement.

- 1. To change the statistics that are displayed, select **Measure > Statistics**, and then select Mean or All. (All includes min, max, mean, standard deviation, and population.)
- 2. To remove statistics select Off.

Note: Placing the cursor over a measurement displays a higher resolution version of the measurement.

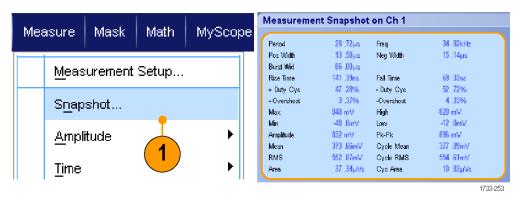

1733-108

Snapshot

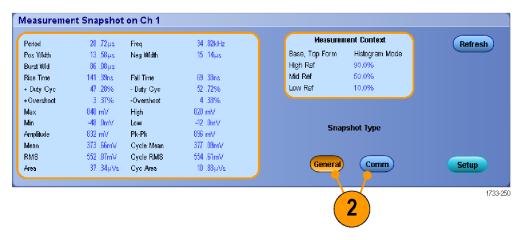

To see a one-time view of all valid measurements, select **Measure > Snapshot**.

Note: If the setup for a measurement is invalid, theresults of that measurement is displayed as 3 question marks.

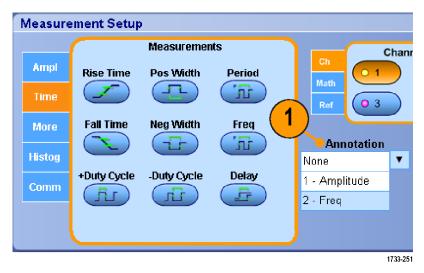

To select between taking a snapshot of general measurements or communications measurements, select General or Comm.

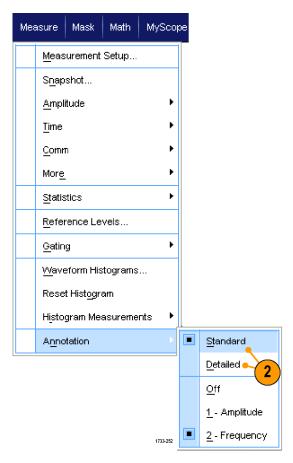

Annotate measurements

1. To annotate measurements, select **Annotation** from the Measurements setup control window. From the drop down list, select the measurement to annotate.

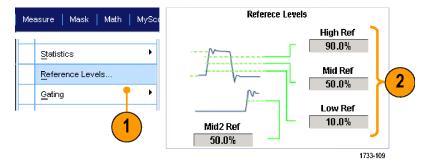

2. To select the amount of measurement annotation detail, select Measure > Annotation > Standard or Detailed.

Reference Levels

Reference levels determine how time-related measurements are taken.

- 1. Select Measure > Reference Levels....
- 2. Adjust the measurement reference levels to different relative or absolute values.
 - High and Low references are used to calculate rise and fall times. The default High reference is 90% and Low reference is 10%
 - Mid reference is primarily used for measurements between edges such as pulse widths. The default level is 50%.
 - Mid2 reference is used on the second waveform specified in delay or phase measurements. The default level is 50%.

Quick tips

To ensure accurate noise values, be sure to go to the Reference Levels Setup menu and set the signal type to Eye when measuring an Eye signal.

Taking cursor measurements

Use cursors to take manual measurements on acquired data.

1. Push Cursors.

Note: If cursors are on but the multipurpose knob readouts are not attached to the Position controls, press the Cursors button to attach the controls to the readouts. Press the Cursors button again to turn cursors off.

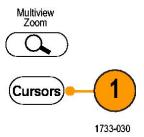

Figure 43: MSO70000DX and DPO70000DX Series

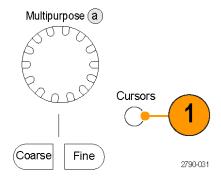

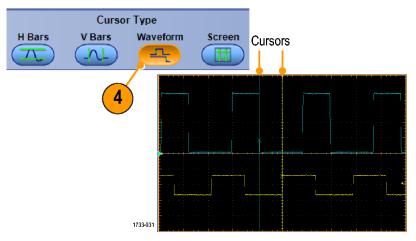

Figure 44: MSO5000B and DPO5000B Series

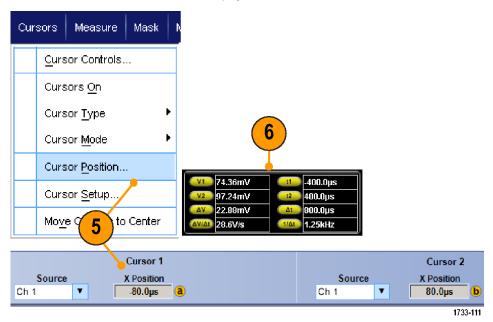

- 2. Select the Cursor Source.
- 3. Select a cursor type from one of the following:
 - H Bars measure amplitude (typically in volts or amperes)
 - V Bars measure horizontal parameters (typically time)
 - Waveform and screen cursors measure vertical and horizontal parameters simultaneously. Waveform cursors are attached to the waveform, and screen cursors float, unattached to the waveform.

4. To take measurements between two waveforms, select Waveform, and then select the waveform source for each cursor.

- 5. Select Cursors > Cursor Position..., and then use the multipurpose knobs to adjust the cursor position.
- 6. Read cursor measurement results in the display.

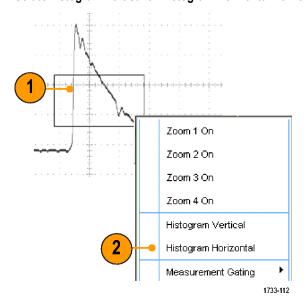

Quick tips

- Use the Cursor Track Mode to set the cursors to move in tandem. Use the Cursor Independent mode to move the cursors separately.
- · If you use the zoom graticule, you can place a cursor directly on a specific waveform point to take precision measurements.
- You can also move cursors by clicking and dragging them to a new position.
- You can also move cursors to the center of the display by pressing **Move Cursors to Center**.
- · You can select solid or dashed cursors.
- Vertical cursors measure the time from the trigger point to the vertical cursor.

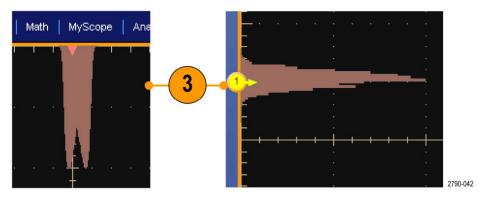

Setting up a histogram

You can display either a vertical (voltage) or horizontal (time) histogram. Use histogram measurements to get statistical measurement data for a section of a waveform along one axis.

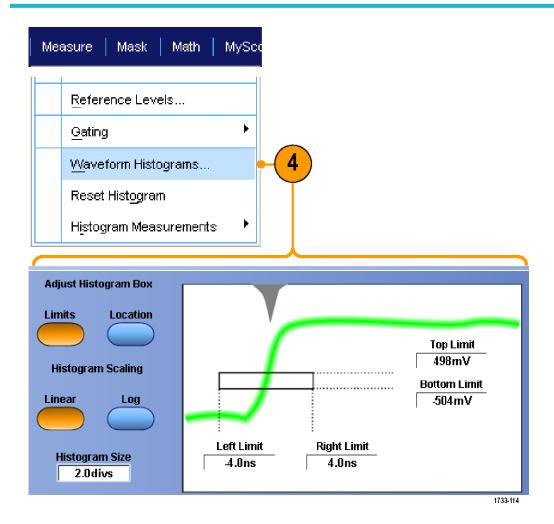

- 1. Click and drag the pointer across the segment of the waveform that you want the histogram to cover. For example, make the box for a horizontal histogram wider than it is tall.
- 2. Select Histogram Vertical or Histogram Horizontal from the shortcut menu.

3. View the histogram at the top (for horizontal histograms) or the left edge (for vertical histograms) of the graticule.

- **4.** To make adjustments to the histogram scale or the size and location of the histogram box, select **Measure > Waveform Histograms**, and then use the Histogram Setup control window.
- 5. You can also take automated measurements on histogram data. (See *Taking automatic measurements* on page 132)

Quick tips

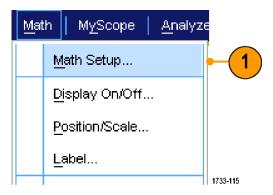

- Use vertical histograms to measure signal noise and horizontal histograms to measure signal jitter.
- Use the click and drag procedure to activate the shortcut menu to turn the histogram display off.

Using math waveforms

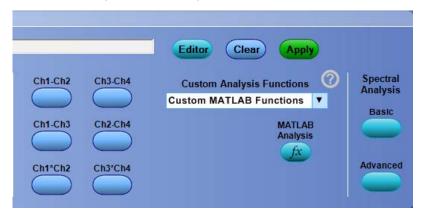

Create math waveforms to support the analysis of your channel and reference waveforms. By combining and transforming source waveforms and other data into math waveforms, you can derive the data view that your application requires.

Use the following procedure for predefined math equations.

1. Select Math > Math Setup.

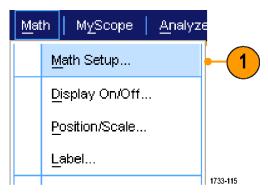

2. Choose one of the predefined math equations.

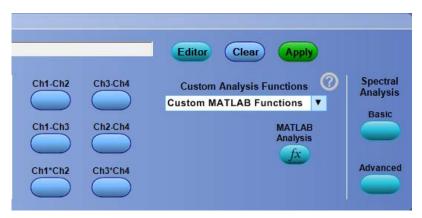

Use the following procedure to build an advanced math waveform expression.

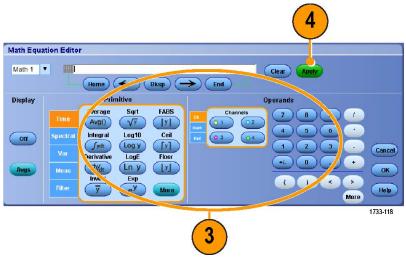

1. Select Math > Math Setup.

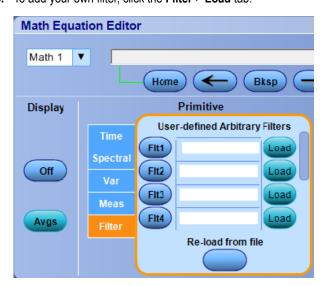

2. Click Editor.

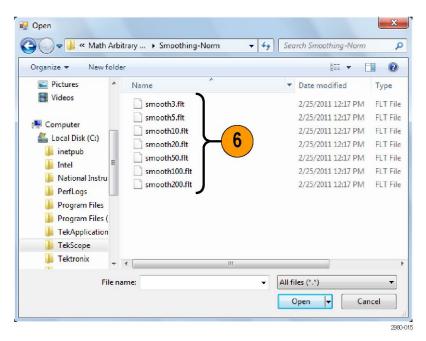

- 3. Build your advanced math waveform expression using sources, operators, constants, measurements, variables, and functions
- 4. When you have defined the expression to your satisfaction, click Apply.

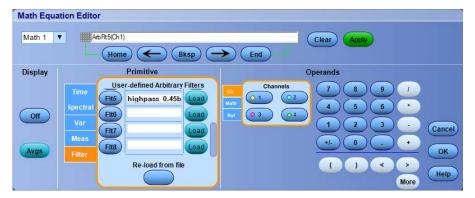

5. To add your own filter, click the Filter > Load tab.

6. Double click the folder for the filters and double click the filter you want to use.

- 7. Build your math expression using the filter you selected.
- 8. When you have defined the expression to your satisfaction, click Apply.

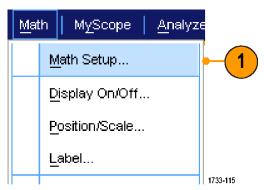

Quick tips

- Double clicking on a math expression opens the Math Equation Editor.
- Math definitions are not implemented if the sources are not valid.
- Math waveforms are created from analog channel, reference, math source waveforms and from measurements.
- · Digital channels are not valid in math waveforms. However iCapture waveforms are valid in math waveforms.
- Use Digital Properties to set the digital threshold of analog channels.
- Measurements are taken on math waveforms in the same way as on channel waveforms.
- Math waveforms derive their horizontal scale and position from the sources in their math expressions. Adjusting these controls for the source waveforms also adjusts the math waveform.
- If Autoscale is not checked, vertical scale and position are not calculated when a math waveform is turned on or the math equation is changed.
- Magnify math waveforms using MultiView Zoom; use the mouse for positioning the zoomed area.
- See the online help for more information on arbitrary math filters.

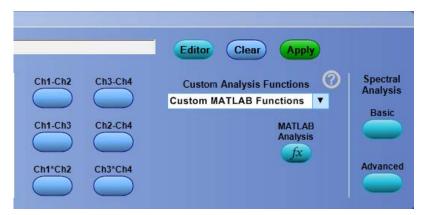

Using Spectral Analysis

Use the following procedure for predefined spectral math expressions. See the online help for more information.

1. Select Math > Math Setup.

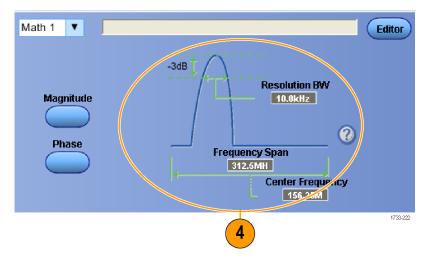

- 2. Choose one of the predefined spectral math expressions.
- 3. Click Basic.

4. Click Resolution BW or Frequency Span and use the keypad or the multipurpose knobs to adjust the spectral display.

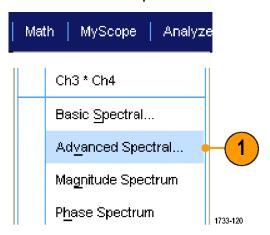

Note: Resolution BW and Frequency Span are only adjustable in Manual Horizontal Mode.

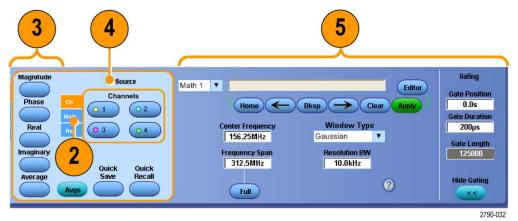

Use the following procedure to build an advanced spectral math expression.

1. Select Math > Advanced Spectral.

- 2. Select the math waveform that you want to define.
- 3. Click the type of spectral waveform that you want to create. To redefine a waveform, click Clear.
- 4. Select the source waveform.
- 5. Adjust the spectral waveform, using the controls in the Spectral Setup control window and use the multipurpose knobs.

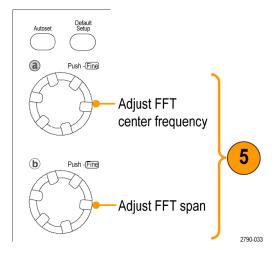

Figure 45: MSO70000DX and DPO70000DX Series

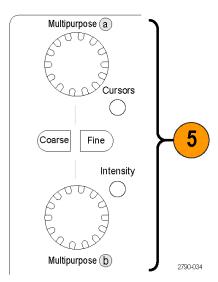

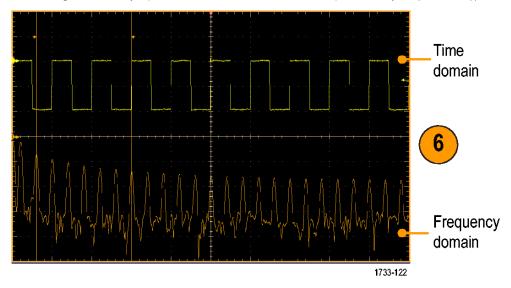

Figure 46: MSO5000B and DPO5000B Series

6. View time-domain and frequency-domain waveforms simultaneously.

Use Gating to select only a part of the time-domain waveform for spectral analysis. (See Gating)

Quick tips

- Sources for spectral math waveforms must be channel or other math waveforms
- Use short record lengths for faster instrument response.
- Use long record lengths to lower the noise relative to the signal and increase the frequency resolution.
- Different window functions produce different filter response shapes in the spectrum and result in different resolution bandwidths. See the online help for more information.
- The resolution bandwidth (RBW) directly controls the gate width. Therefore, the time domain gate markers move as you adjust the control.
- You can display the linear magnitude of the real data or the imaginary data in the spectrum. This is useful if you process the spectrum off line and transform it back into a time domain trace.

Using the Serial Error Detector

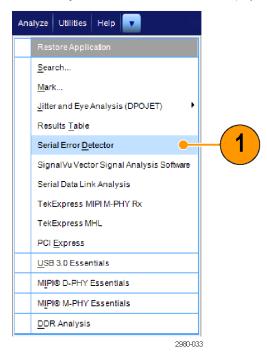

The Serial Error Detector requires option ERRDT. The oscilloscope Error Detector conducts Bit, Frame, Symbol, and Character tests much like a BERT. It has the advantage that it not only counts the errors and computes the error rates, but it also shows you where the error occurs in the signal and it allows you to connect probes to other channels to debug the source of the errors, such as crosstalk.

The Error Detector is often used in conjunction with TekExpress software applications to conduct receiver and margin testing.

The Error Detector has built-in preset setups that cover the most common use cases. These can be modified and saved as custom setup files for later recall. Sample arbitrary waveform generator (AWG) setup files are included for various SATA Gen3 and USB3 signals. These files make it easy to verify correct operation of the Error Detector, and may be used to test a device-under-test (DUT).

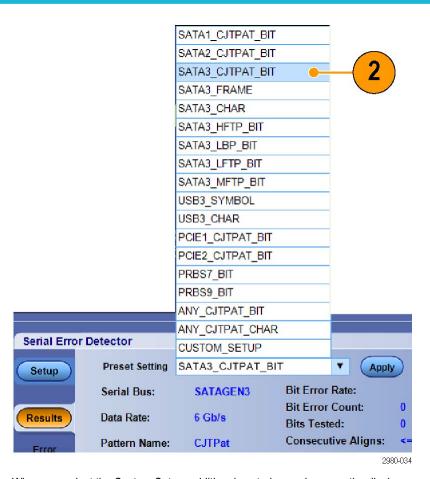

To use the Serial Error Detector, do the following steps:

Select Analyze > Serial Error Detector to display the Error Detector control window.

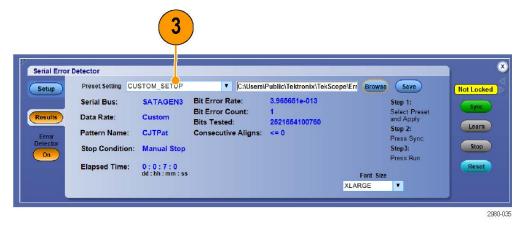

2. Select a setup from the **Preset Setting** drop-down list and press **Apply**.

If Custom Setup is not required, proceed to step 13.

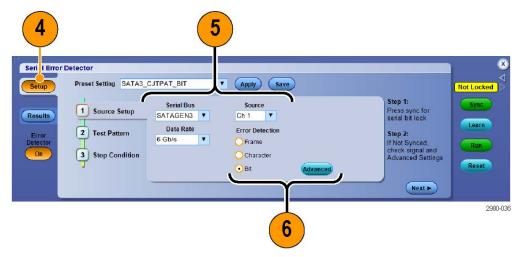

3. When you select the Custom Setup, additional controls are shown on the display so you can browse for a setup file. The usual idea is to start with a setup that is close to what you want, use the UI to specify the settings you desire, and then save the result. When you enter a new name for the file in the file name text control, press Enter to have your editing changes accepted. Then press the Save button to save the setup into the file. To recall a setup file, browse to the file you want and press Open. The default location for Error Detector setup files is C:\Users\Pub\u0002lic\Tektronix\TekScope\ErrorDetector.

- 4. Select the **Setup** tab.
- **5.** From the Source Setup tab, select the Serial Bus, Data Rate and signal Source from the drop-down lists.
- 6. Click the Error Detection option button for the type of error you want to detect.

The **Advanced** button will open the Advanced Settings window.

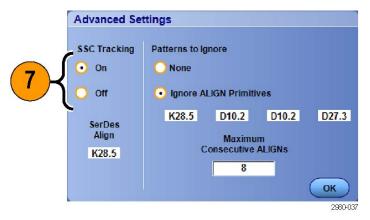

The advanced settings window provides controls for parameters that you may need to change for special testing. The default settings for these values are correct for most devices.

7. Click **On** or **Off** to turn Spread Spectrum Clocking (SSC Tracking) on or off.

SSC is on by default.

receiver).

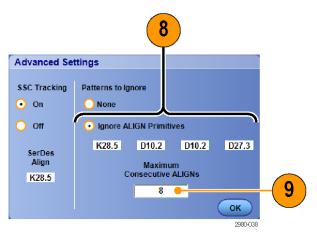

- 8. To ignore align primitives, select the **Ignore Align Primitives** option button and specify the primitives using the keypad or keyboard.

 Alignment Primitives are inserted into the signal by the DUT for purposes of pacing (keeping transmitter from overrunning the
- 9. Enter the Maximum consecutive alignes using the keypad or keyboard.

The maximum consecutive aligns is a design parameter of the particular device that indicates how many consecutive aligns are allowed.

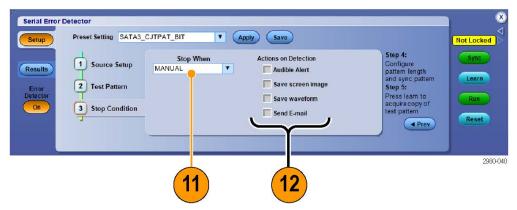

The Test Pattern Setup provides control of the signal test pattern length and the Sync Pattern description. These are often the most difficult settings, because they require knowledge of the signal. The Pattern Length is the number of bits in the repeating signal being sent to the DUT or oscilloscope by the signal generator or AWG. The Sync Pattern is a 10-, 20-, 30-, or 40-bit unique pattern in the signal that the error detector uses to align the signal to the acquired comparison pattern. The Advanced check box just allows you to set the Disparity of each of the Sync Pattern symbols individually. The X means don't care. The Preset Setups set these parameters to make the job easier for the common cases.

10. From the Test Pattern tab, specify the Sync Pattern, Sync Pattern Polarity, and the Pattern Length.

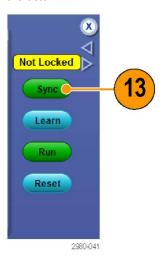

- **11.** From the **Stop Condition** tab, select the Stop When condition. You can stop manually, after a preset count or time that you specify, or on an error.
 - Use large numbers for bit count tests. At 6 Gb/s, 60 billion bit tests take 10 seconds.
- **12.** Select and setup the actions to perform when the stop condition is met. Using these actions, you can preserve the information captured by the oscilloscope. You must set up the email address and the SMTP server for Send E-mail to work.

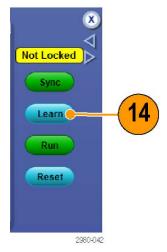

- **13.** Press the **Sync** button and wait for a status of Not Counting (about 6 seconds). Depending on the signal quality, you may need to press the Sync button more than once.
 - Sync gets the oscilloscope synchronized to the signal.

A status of **No Signal** status indicates that the oscilloscope cannot detect the signal. You may need to turn on the output of the signal generator or AWG. A status of **No Sync** may arise for Bit tests that require a known pattern length, sync pattern, or alignment character.

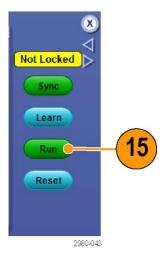

14. Press the Learn button, if visible. Learn only applies to some Bit Error Tests. Frame, Symbol, and Character tests do not require the learn operation. Learn discovers the repeating pattern in the signal and stores it into system memory for comparison to the signal to determine errors in the signal. Once a signal is in memory, it remains there until a subsequent Learn operation, so you don't have to use the Learn button every time you start testing for errors.

15. Press the **Run** button to start the error detector.

If desired, you may press Stop or Reset at anytime. After a Stop, you can press Run again.

Run starts the Error Detector testing for errors.

16. Select the Results tab to see the results of running the error detector.

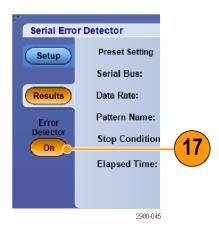

Note: The Serial Error Detector automatically resyncs and resets all counts to zero if you press **Reset** or disconnect and then reconnect the signal.

If you are using one of the supplied AWG signal patterns, you can press the **Force Event** button on the AWG to induce an error in the signal to verify the operation of the Error Detector. These AWG setup files are located in Win7 in the directory C:\User\Public\Tektronix\Tekscope\ErrorDetector\AWG.

Alternatively, you can verify operation by disconnecting and reconnecting the signal. There will be massive errors when the signal is disconnected, but after the signal is reconnected the Error Detector will resynchronize to the signal, clear the error counts and rates, and resume testing.

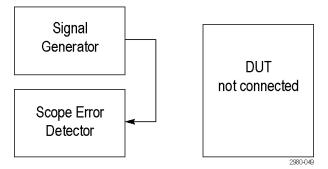

17. Press the Error Detector Off button to end the error detector session. A popup will appear saying the trigger has changed to Edge.

The typical startup sequence can be summarized as a) Select a Preset Setup; b) Press Sync; c) Press Learn (if visible); and d) Press Run. The Sync operations gets the oscilloscope synchronized to the signal, the Learn operation acquires the signal pattern into oscilloscope memory, and the Run operation starts the Error Detector testing for errors. Note that the Learn operation only applies to some Bit error tests. Remember, Frame, Symbol, and Character error tests do not require a Learn operation.

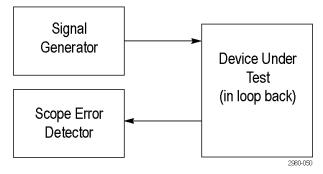

There are several cable arrangements you can use with the Serial Error Detector. The first cable setup specifically applies to SATA, PCle, and generic 8b/10b bit testing, when a Learn operation is required to acquire the signal test pattern into Error Detector memory. However, you can use this same cable arrangement to verify Error Detector operation.

18. There are several cable arrangements you can use with the Serial Error Detector. The first cable setup specifically applies to SATA, PCle, and generic 8b/10b bit testing, when a Learn operation is required to acquire the signal test pattern into Error Detector memory. However, you can use this same cable arrangement to verify Error Detector operation.

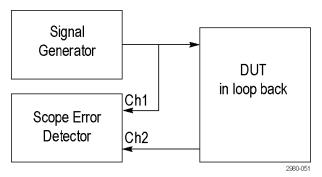

19. Having done the Learn operation, you can now insert the DUT in-between the Signal Generator and the Error Detector as shown.

With the DUT inserted between the Signal Generator and the Serial Error Detector, all you need to do to get the Error Detector running is to press **Sync** and **Run** buttons, because the Learn operation was completed in the previous step. If you do another Learn operation, you risk learning errors created by the DUT.

20. To avoid having to rearrange the cables after the Learn operation, you may split the output of the signal generator, putting one branch into the Error Detector and one branch into the DUT. Here the Learn Operation is done on Ch1, but the actual error detection occurs

on Ch2. You can adjust the amplitude of the signal generator to account for the loss due to splitting the signal. This works because the Error Detector learn operation stores the signal test pattern into non-channel-specific memory.

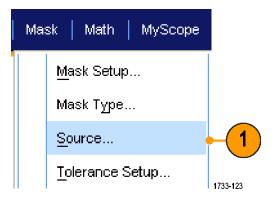

21. When the Error Detector is driven from the user interface, bus triggers are used whenever possible, so that bus decoding is automatically enabled. The Decoding indicates the location of the error in the signal by highlighting the decoded value in red, as shown in the screen shot below. You can use additional oscilloscope channels to simultaneously probe other signals to debug the cause of the error.

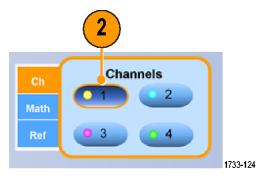

Using mask testing

Serial Communications Mask Testing (Option MTM or MTH) allows you to compare your signal to a predefined template or mask. For the signal to pass the test, it must fall outside the segments defined by the mask. Generally, standards committees such as ANSI define the masks. To perform mask testing do the following:

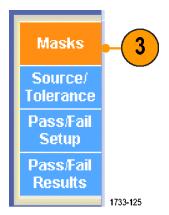

1. Select Mask > Source.

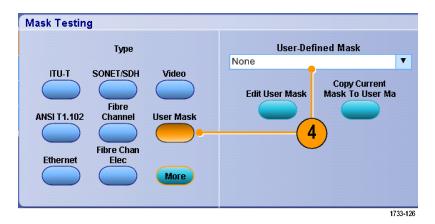

2. Select the signal source.

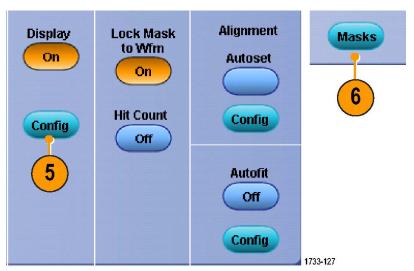

3. Click the Masks tab.

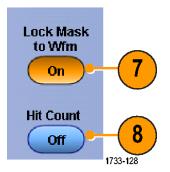

4. Select the Type and standard.

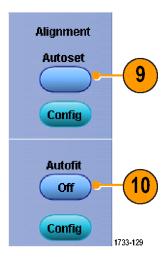

- 5. Click a **Config** button to access a Mask Configuration control window, where you can adjust how masks and violations are displayed and how Mask Autoset and Autofit are configured.
- **6.** Click **Masks** to return to the Mask Setup control window.

- 7. Click Lock Mask to Wfm **On** to track mask changes in the horizontal or vertical settings.
- 8. Toggle Hit Count On to highlight violations during a mask test.

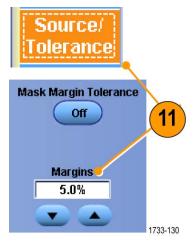

- 9. Click **Autoset** to automatically align the waveform with the mask based on the characteristics of the input signal.
- 10. Toggle Autofit On to automatically reposition the waveform after each acquisition to minimize hits.

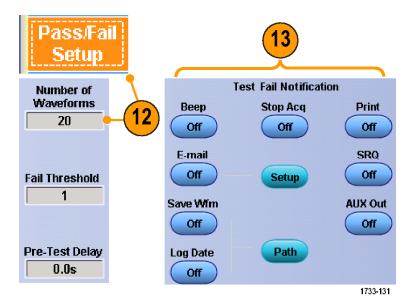

11. Click the **Tolerance** tab, and then set the tolerance.

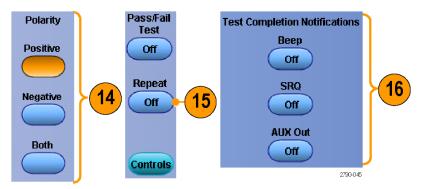

Tolerance settings greater than 0 % make the mask test harder to pass, settings less than 0 % make the test easier to pass. Use 0 % if you want the mask as specified in the standard. Changing the percentage allows you to do margin testing.

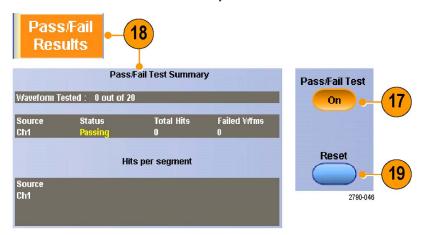

- **12.** Select the **Pass/Fail Setup** tab, and then set up the pass/fail parameters. (When acquisition mode is Waveform Database, the # of Wfms label becomes Samples.)
- 13. Select your Pass/Fail Test Notifications.

- 14. Select the polarity of the waveform you want to test.
- 15. Click Toggle Repeat On to run the mask test continuously.
- **16.** Select the notice you want when the test is complete.

- 17. Click the Pass/Fail Results tab to view the test results.
- 18. Click Pass/Fail Test On to start the mask test.
- 19. Click Reset to reset the totals and clear any violations.

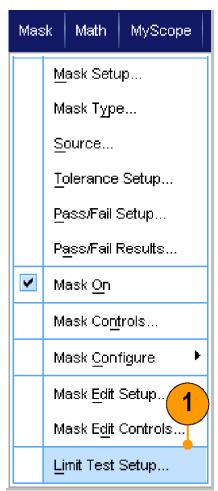

Quick tips

- · Mask testing is not available on digital channel waveforms.
- If the signal is not within the mask, enable Autoset to center the waveform in the mask.

Using limit testing

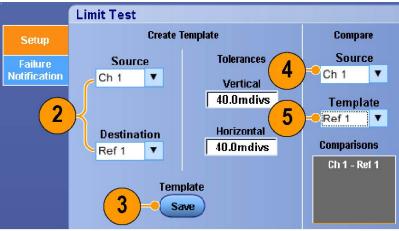

Optional limit testing allows you to compare an active signal with a template waveform. Build your template waveform from a known good signal and use it to compare to an active signal to perform pass/fail testing.

1. Select Mask > Limit Test Setup.

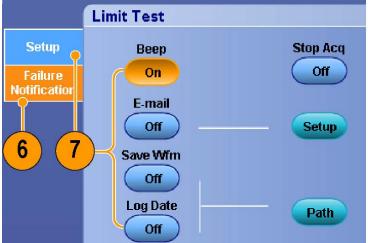

1733-274

- 2. Create the template by selecting the Source, Destination, and Tolerances. Use the multipurpose knobs to adjust the Tolerances. Tolerances specify how much margin the signal is allowed before failing the limit test.
- 3. Click **Save**. You can create multiple templates and save them for later use.
- **4.** Select the source waveform to compare to the template.
- 5. Select the template to compare to the Source waveform. (Usually, this is the template that you created in step 3.)

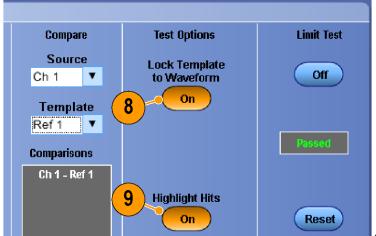

1733-275

- 6. Click Failure Notification to set up the Failure Notification.
- 7. Select the failure notification(s), and then click **Setup** to return to the setup control window.

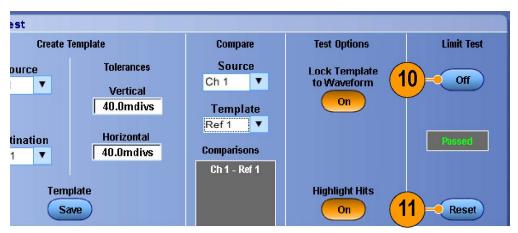

1733-276

- **8.** Click Lock Template to Waveform **On** to lock the vertical scale or position of the template to that of the source waveform.
- 9. Click Highlight Hits **On** to show points that fall outside the template in a different color.

1733-277

- 10. Toggle Limit Test to On to start the test.
- 11. Click **Reset** to clear all violations and reset the test.

1733-278

Quick tips

- · Use active or saved waveforms to create a limit test template.
- Using Average acquisition mode will create a smoother template waveform.
- Using Envelope acquisition mode will create a template that allows for occasional overshoots.

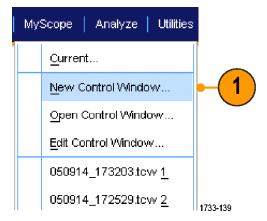

MyScope

MyScope allows you to create custom control windows that include only the controls that you use regularly. Instead of switching between several control windows, put the controls you use into a custom control window.

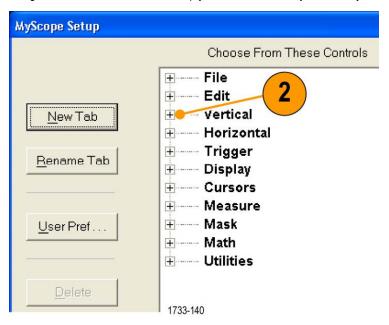

This section contains procedures for creating and using MyScope control windows. Detailed information is available in the online help.

Creating a new MyScope control window

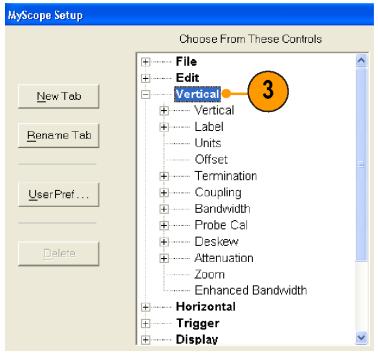

1. Click MyScope > New Control Window.

2. Click + to expand a category. Controls that you can add to your MyScope control window are contained within each category. The categories match the menu bar to help you find the controls you normally use.

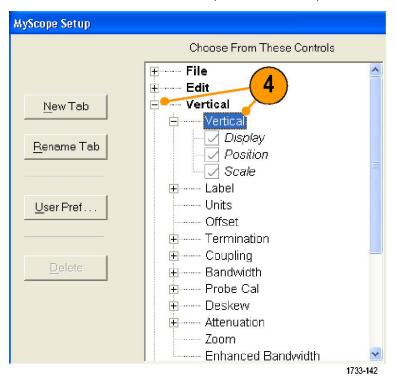

3. Click a control to preview it.

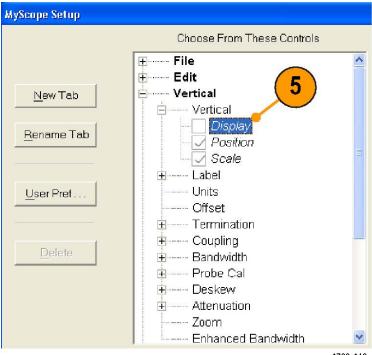

1733-141

Double-click the control or click the + to expand the control list. (If there is no +, then the control cannot be customized further.)

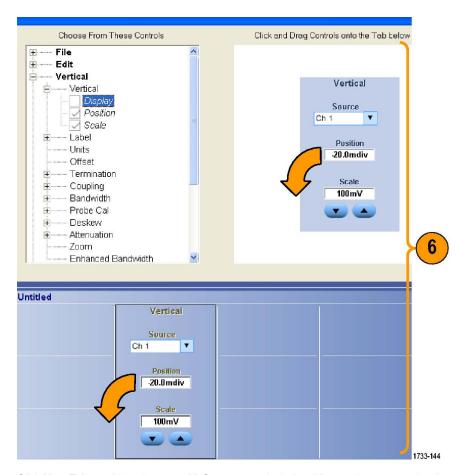

5. Clear the check boxes to remove any components that you do not want included in the control.

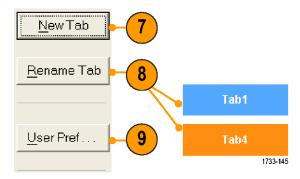

1733-143

6. Click and drag the control to your MyScope control window. The control will snap to the nearest grid location when you release the mouse. Change the placement of the control in your MyScope control window by clicking and dragging.

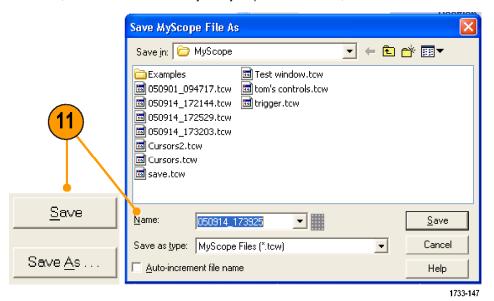

- 7. Click **New Tab** to add a tab to your MyScope control window. You can have up to six tabs.
- **8.** To rename a tab do one of the following:
 - · Click Rename Tab.
 - · Double-click the tab, and then type the new name.
- 9. Click **User Pref...** to specify user preferences that are loaded with your MyScope control window.

- **10.** To delete controls do one of the following:
 - · Select a tab, and then click **Delete**. The tab and all of the controls are deleted.
 - Select a control, and then click Delete. Just the selected control is deleted.

11. Click Save, and then enter a name for your MyScope control window, or use the default name.

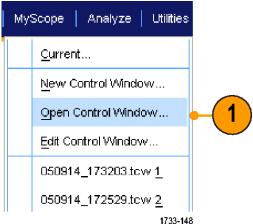

Quick tips

- To reconfigure a control, click and drag it back to the preview window. Then select or clear the check boxes to include or remove
 components in the control.
- To change the tab order, click and drag a tab to a new location.
- To delete a control, click and drag it to the upper half of the screen (out of your MyScope control window).

Using MyScope control windows

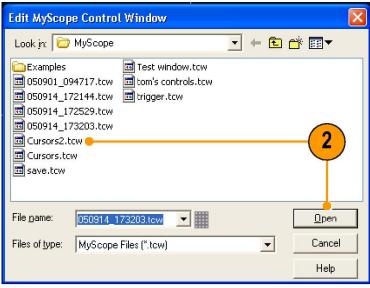

To open a previously defined MyScope control window, do the following:

1. Select MyScope > Open Control Window or one of the five most recently used MyScope windows.

1733-14

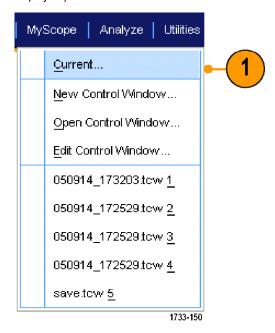

2. Select the MyScope control window you want to use, and then click Open.

1733-149

To display the active MyScope control window, do the following:

1. Select **MyScope** > **Current** or click **MyScope** in the toolbar mode. (Your MyScope control window remains active even when it is not displayed.)

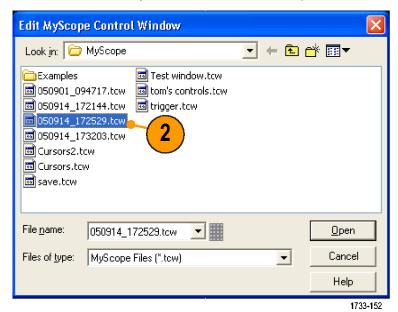

To edit a MyScope control window do the following:

1. Select MyScope > Edit Control Window.

2. Select the control window you want to edit, and then click Open.

Quick tips

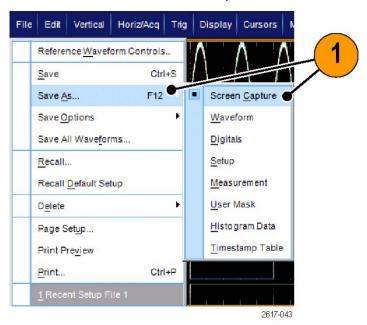

- Some controls function differently in a MyScope control window than they do in the standard control window. For details, see the online help.
- You can copy MyScope control windows (.tcw files) to other MSO70000DX, DPO70000DX, MSO5000B and DPO5000B Series
 instruments.

Saving and recalling information

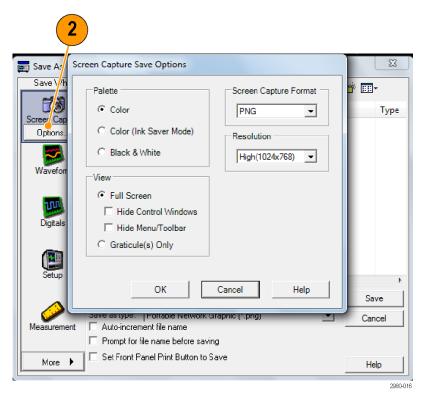

This section contains procedures for saving and recalling screen captures and setups, saving measurements, using the clipboard, and printing on your instrument. Detailed information is available in the online help.

Saving screen captures

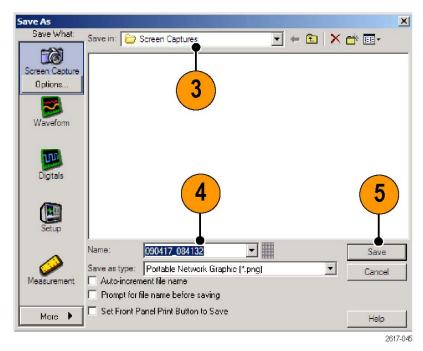

1. Select File > Save or Save As > Screen Capture.

2. Click Options... to set up the Palette, View, Image, or Screen Capture Format options; otherwise, skip to step 3.

- 3. Select the location to save the screen capture.
- 4. Type in a name for the screen capture, or use the default name, and then select a file type.
- 5. Click Save.

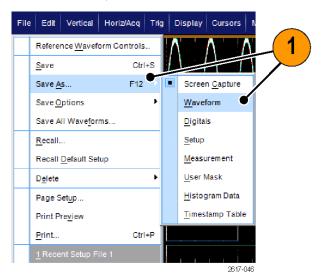

Quick tip

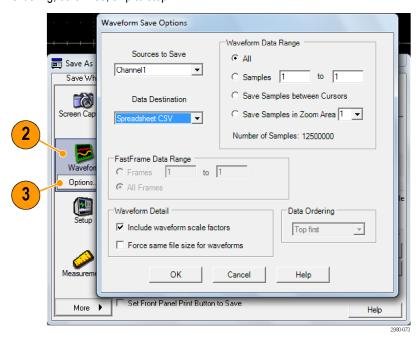

To quickly save multiple screen captures, select Set Front Panel Print Button to Save, and then click Save. You can now save a screen capture by pushing the front panel Print button.

Saving waveforms

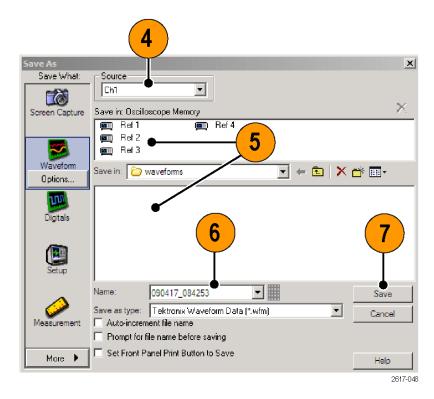

1. To save waveforms, select File > Save or Save As > Waveform.

- 2. Click Waveform.
- 3. Click **Options**... to specify the Waveform Data Range, FastFrame Data Range, Waveform Detail, Data Destination, Source, or Data Ordering; otherwise, skip to step 4.

- 4. Select the Source.
- 5. You can either save the waveform as a reference waveform in the instrument memory or as a .wfm file in a Windows directory. To save the waveform as a reference, select Ref 1–4. To save as a .wfm file, select the location where you want to save the waveform.
- 6. If you are saving as a .wfm file, type in a file name, or use the default.
- 7. Click Save.

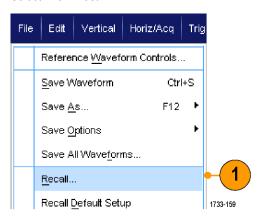

Quick tips

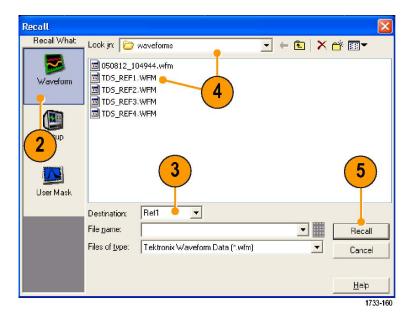

- Select Auto-increment file name to save similar waveforms without having to retype the entire name.
- To quickly save multiple waveforms, select Set Front Panel Print Button to Save, and then click Save. You can now save a waveform
 by pushing the front-panel Print button.

Recalling waveforms

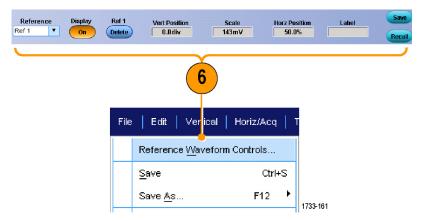

1. Select File > Recall.

- 2. Click Waveform.
- 3. Select the Destination of the waveform you are recalling.
- 4. Select the waveform to recall.
- 5. Click Recall. Clicking Recall turns on the reference waveform and activates the Reference Waveform control window.

 Use the controls to adjust the Reference waveform. You can also access the Reference Waveform control window by selecting File > Reference Waveform Controls.

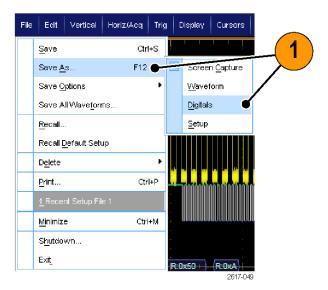

Quick tip

You can save several different file types but you can only recall setup (*.set) files and waveform (*.wfm) files.

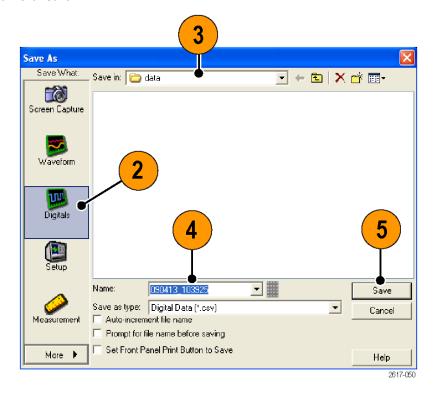

Saving digital waveforms

On MSO Series instruments, you can save digital waveforms in a .csv format file.

1. To save digital waveforms, select File > Save or Save As > Digitals.

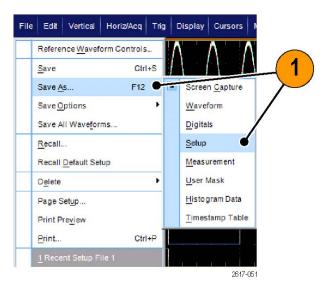

- 2. Click Digitals.
- 3. You can only save digital waveforms as a .csv file in a Windows directory. To save as a .csv file, select the location where you want to save the waveform.
- 4. Type in a file name, or use the default.
- 5. Click Save.

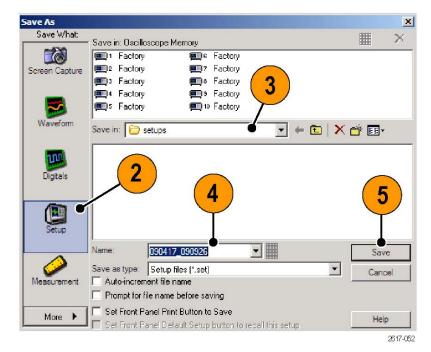

Saving instrument setups

1. Select File > Save or Save As > Setup.

- 2. Click Setup.
- 3. Select the location where you want to save the setup. Either save the setup to the instrument memory in one of the ten setup storage locations or as a .set file in a Windows directory.
- 4. Type a file name or use the default name. Use the pop-up keyboard to type a file name for a setup saved to the instrument memory.
- 5. Click Save.

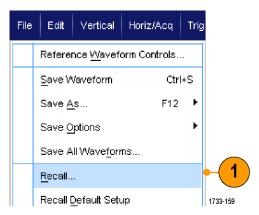

Quick tips

- If the touch screen is enabled, use the pop-up keypad to label the setups for easy identification.
- Use Auto-increment file name to save similar files without having to retype the entire file name.
- To quickly save multiple setups, select **Set Front Panel Print Button to Save**, and then click Save. You can now save a setup by pushing the front panel Print button.

Recalling instrument setups

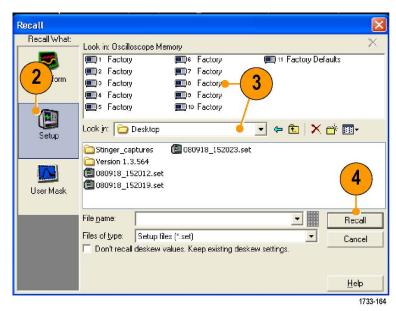

1. Select File > Recall.

- 2. Click Setup.
- 3. Select the setup you want to recall. Recall a setup file from one of the ten locations in the instrument memory or from a Windows directory.

To retain your current deskew settings, click **Don't recall deskew values**.

4. Click Recall.

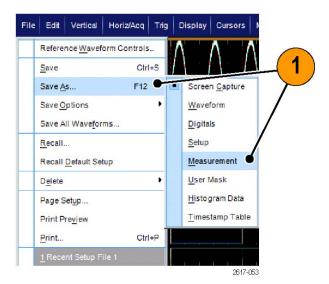

Quick tip

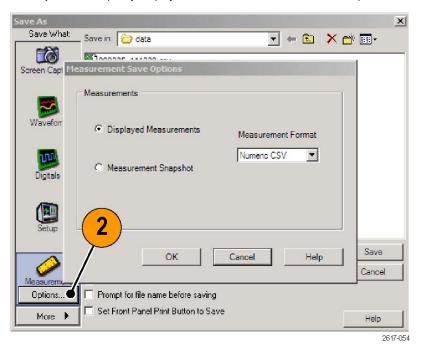

You can recall any setup stored on disk and then save it in an internal setup storage location for quicker access.

Saving measurements

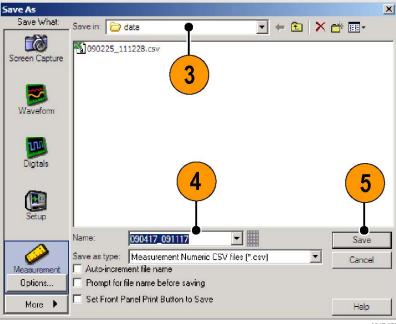

1. Select File > Save or Save As > Measurement.

2. Click Options... to specify Displayed Measurements, Measurement Snapshot, or Measurement Format; otherwise, skip to step 3.

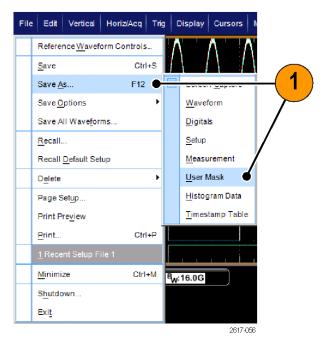

- 3. Select the location to save the measurement.
- 4. Type in a name for the measurement, and then select a file type.
- 5. Click Save.

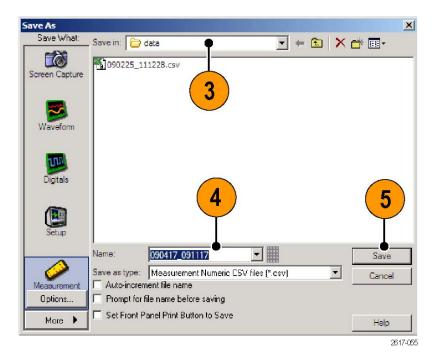

2617-055

Saving user masks

1. Select File > Save or Save As > User Mask.

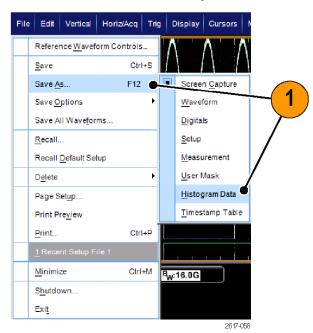

- 2. Click User Mask.
- 3. Select the location to save the mask.
- 4. Type in a name for the mask, and then select a file type.
- 5. Click Save.

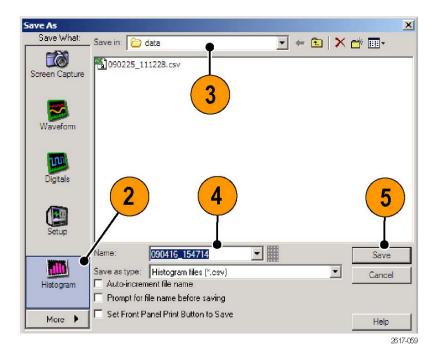

Saving histogram data

1. Select File > Save or Save As > Histogram Data.

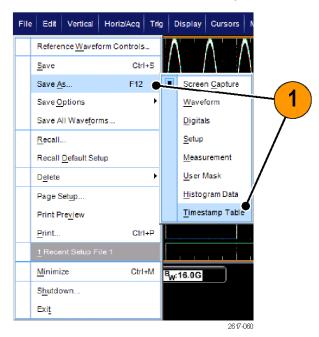

- 2. Select **Histogram**. Depending on previous selections, you may need to select **More** > **Histogram Data** to display the Histogram selection.
- **3.** Select the location to save the histogram.
- **4.** Type in a name for the histogram, and then select a file type.
- 5. Click Save.

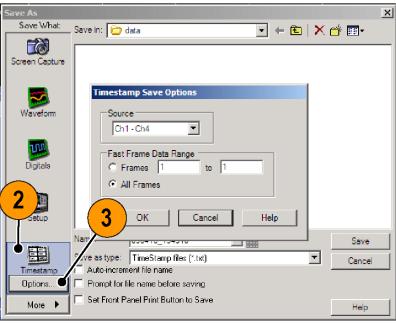

Saving timestamps

1. Select File > Save > or Save As > Timestamp Table.

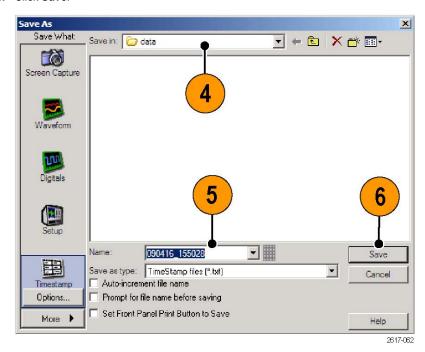

- 2. Click **Timestamp**. Depending on previous selections, you may need to select **More > Timestamp Table >** to display the Timestamp selection.
- 3. Click Options... to specify the Source or FastFrame Data Range; otherwise, skip to step 4.

2617-061

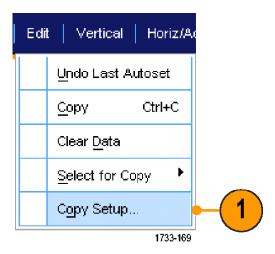

- 4. Select the location to save the timestamp.
- 5. Type in a name for the timestamp, and then select a file type.
- 6. Click Save.

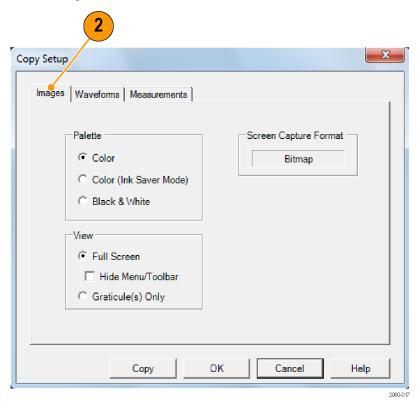

Copying your results to the clipboard

Use the following procedure to set the output content and format for images, waveforms, or measurements to be copied to the Microsoft clipboard.

1. Select Edit > Copy Setup.

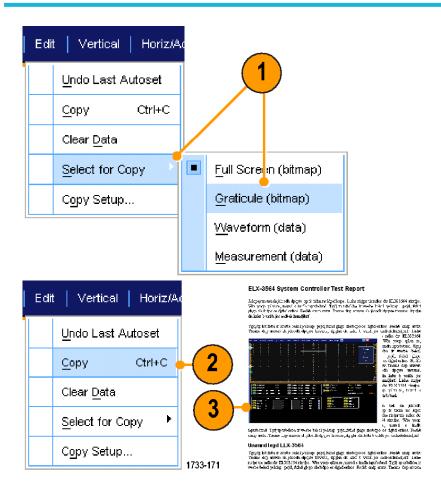

2. Click the Images, Waveforms, or Measurements tab, and then select the desired options.

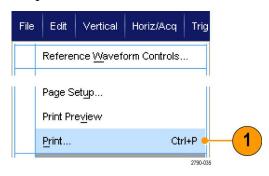

To copy images, waveforms, or measurements, use the following procedure:

- 1. Select the item that you want to copy.
- 2. Select Edit > Copy or press Ctrl + C.
- 3. Press Ctrl + V to paste the item into a Windows application.

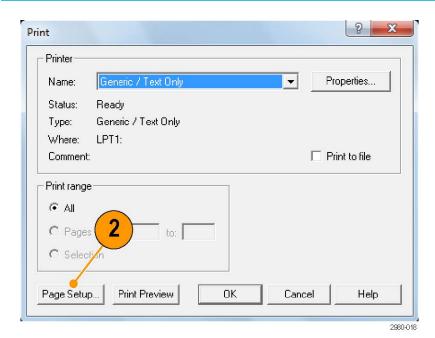

Printing a hard copy

1. To print a hard copy, push the print button or select **File > Print**. If necessary, make changes to the page orientation in the Page Setup dialog box.

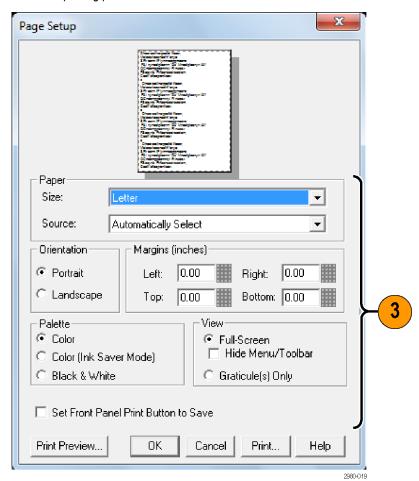

Your Print and Page Setup dialog boxes will depend on the printer you are using.

2. Click Page Setup.

3. Select the printing parameters.

188

Run application software

Each application is available for ten free trials on your instrument. These applications provide application-specific measurement solutions. Some examples are described below. Additional packages may be available. Some applications may not be available on your instrument. Contact your Tektronix representative or visit our Web site at www.tektronix.com for more information.

- Use DDRA Memory Bus Analysis to automatically identify DDR1, LP-DDR1, LP-DDR2, LP-DDR3, DDR2, DDR3, DDR4, DDR3L, GDDR3 and GDDR5 read and writes.
- Use DJA DPOJET Jitter and Eye Diagram Analysis, Advanced to reliably measure complex clock, digital, and serial data signals.
 DPOJET Essentials included standard with all models.
- Use D-PHY for MIPI D-PHY Transmitter debug, characterization and compliance testing (requires option DJA).
- Use DP12 Display Port Compliance Software to validate your IC, motherboard, and graphics card designs.
- Use DVI Compliance Test Solution Software for DVI physical layer compliance testing.
- Use ERRDT Frame and Bit Error Rate Detector to detect errors in high speed serial standards (requires option ST6G).
- Use ET3 to perform 10/100/1000 Base-T Ethernet compliance testing.
- Use HT3 HDMI Compliance Test Software for HDMI compliance testing for ≥4 GHz models.
- Use HT3DS HDMI Direct Synthesis for HDMI 1.4 (requires HT3) for HDMI analysis.
- Use LT Waveform Limit Testing to compare an acquired waveform to tolerance boundaries that you set.
- Use MOST Essentials for electrical compliance and debug testing for MOST50 and MOST150.
- Use MTH Communication Mask Testing Software for mask compliance testing on ≥4 GHz models.
- Use MTM Communication Mask Testing Software for mask compliance testing on <4 GHz models.
- Use PCE3 PCI-Express compliance test for Gen3. Used with DPOJET.
- Use PCE compliance test for Gen1 and Gen2. Used with DPOJET.
- Use PWR Power Measurement Software to quickly measure and analyze power dissipation in power supply switching devices and magnetic components.
- Use SDLA64 Serial Data Link Analysis Visualizer to emulate the serial data channel, de-embed a fixture, and add or remove transmitter equalization.
- Use **SR-810B** to enable serial triggering and analysis of 8B/10B signals.
- Use SR-AERO for MIL-STD-1553 Serial Triggering and Analysis.
- Use SR-AUTO for Serial Triggering, debugging, decode and Analysis of CAN, LIN, and FlexRay signals.
- Use SR-COMP to enable serial triggering and analysis of RS-232/422/485/UART signals.
- Use SR-DPHY for MIPI-DSI1 and MIPI-CSI2 serial analysis.
- Use SR-EMBD to enable serial triggering and analysis of I²C and SPI signals.
- Use SR-ENET for serial analysis of Ethernet signals.
- Use SR-PCIE Serial Data Compliance and Analysis (requires ST6G for serial triggering).
- Use SR-USB to enable serial triggering and analysis of USB2.0 and USB3.0 signals.
- Use ST1G or ST6G Serial Protocol Trigger Software to trigger and decode NRZ serial data (ST1G) and 8B/10B data on high-speed serial or data protocols (ST6G). Protocol triggering up to 6.25 GS/s (with ST6G).
- Use SVP, SVM, and SVE Spectral Analysis application to validate wideband designs and characterize wideband spectral events.
- Use SVO for flexible OFDM analysis, requires SVE.
- Use SVT for settling time measurements (frequency and phase), requires SVE.
- Use USB to characterize USB 2.0 signals including mask testing and parametric testing.
- Use USB3 to verify, characterize, debug, and compliance test USB 3.0 systems (requires option DJA).
- Use VET to enable visual trigger and search
- Use XGBT for 10 GBASE-T Ethernet physical medium attachment (PMA) physical-layer (PHY) electrical compliance testing.

Follow the instructions provided with the application software to install it. To run the software, select Analyze and then select the application.

Application examples

This section contains examples of using your instrument in common troubleshooting tasks and extending the use of your instrument.

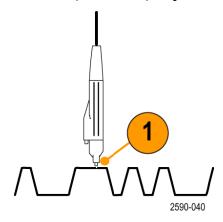

Capturing intermittent anomalies

One of the most difficult tasks that design engineers face is tracking down the cause of intermittent failures. If you know what type of anomaly you are looking for, it is easy to configure the oscilloscope advanced triggering capability to isolate it. However, when you do not know what you are looking for, it can be exceptionally tedious and time consuming to find infrequent anomalies, especially given the low waveform capture rate on traditional digital storage oscilloscopes.

Digital Phosphor Oscilloscopes enabled by DPX technology have an exceptionally fast acquisition mode called FastAcq, which allows you to find anomalies like these in a matter of seconds or minutes. A regular DSO would take hours or days to find the same event.

Use the following procedure to capture intermittent anomalies.

Connect the probe to the input signal source.

Push Autoset.

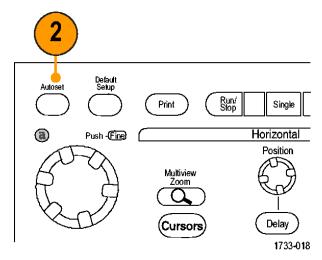

Figure 47: MSO70000DX and DPO70000DX Series

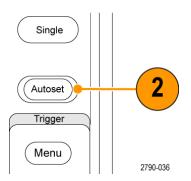

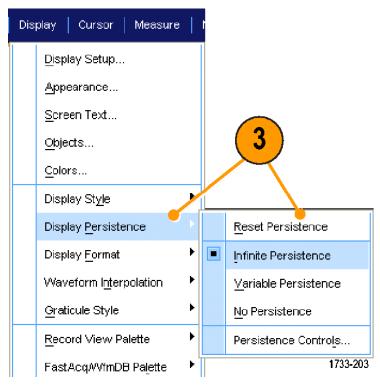

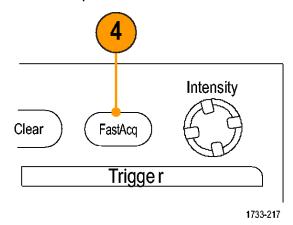

Figure 48: MSO5000B and DPO5000B Series

3. Select **Display > Display Persistence > Infinite Persistence**. In this example, you are looking at a clock signal. After observing the signal for 1–2 minutes, but before you look for the problem elsewhere, go to step 4.

4. Push FastAcq.

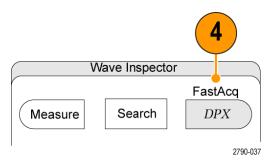

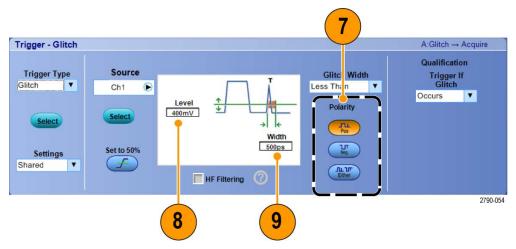

Figure 50: MSO5000B and DPO5000B Series

Figure 49: MSO70000DX and DPO70000DX Series

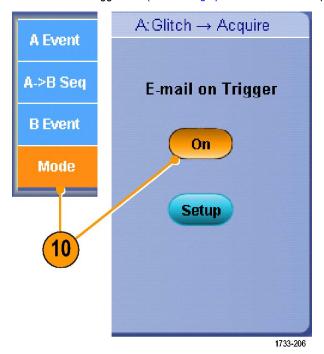

5. Find glitches, transients, or other random anomalies that are present in the signal. In this example, FastAcq revealed an ≈300 ns positive glitch after only a few seconds.

- 1733-204
- **6.** To trigger on the glitch that you identified in step 5, select **Glitch Setup...**.
- **7.** Select the appropriate polarity.
- **8.** Click **Level**, and then set the level based on what you found in step 5.
- 9. Click Width, and then set the width based on what you found in step 5
 - Check HF Filtering if you want the trigger system to treat a high frequency burst as a single pulse.

10. Click E-mail on Trigger On. (See Setting up E-Mail on Event on page 102.)

11. Push Single to trigger on a single glitch.

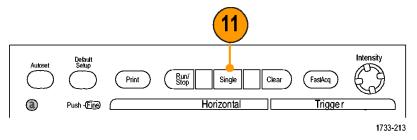

Figure 51: MSO70000DX and DPO70000DX Series

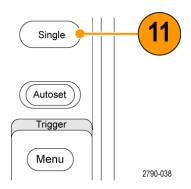

Figure 52: MSO5000B and DPO5000B Series

Using the extended desktop and OpenChoice architecture for efficient documentation

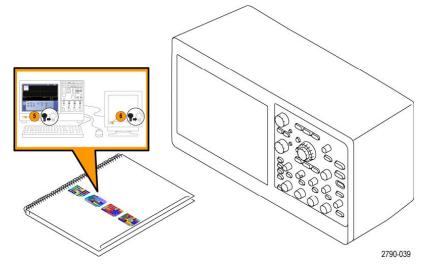

Engineers often need to document their lab work for future reference. Instead of saving screen shots and waveform data to a CD or USB memory device, and then generating a report later, try using the OpenChoice architecture to document your work in real time.

To make your instrument the center of your design and documentation process, use the following procedure.

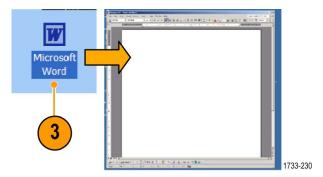

Note: On 64-bit systems, you will need 64-bit compatible device drivers and application software.

- 1. Load Microsoft Word or Excel on your instrument.
- **2.** Connect a second monitor.(See *Adding a second monitor* on page 25.)

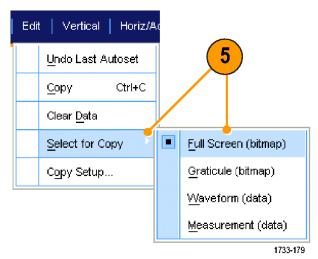

3. Open Microsoft Word, and then drag the Word window onto the extended desktop.

4. Click **TekScope** to restore the instrument application.

5. Select Edit > Select for Copy > Full Screen (bitmap).

- 6. Press Ctrl+C.
- 7. Click in the Word document wherever you want to place the screen shot, and then press Ctrl+V.

Quick tips

 The instrument comes with a variety of OpenChoice software tools designed for maximum efficiency and connectivity to the rest of your design environment.

Triggering on buses

You can use your instrument to trigger on I²C, SPI, RS-232/422/485/UART, MIPI DSI-1, MIPI CSI-2, 8B/10B, USB, CAN, and parallel buses. The instrument can display both physical layer (as analog waveforms) and protocol level information (as digital and symbolic waveforms).

Note:

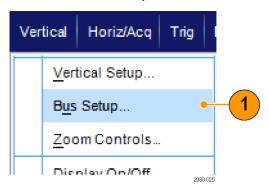

Some trigger types are not available on some instruments.

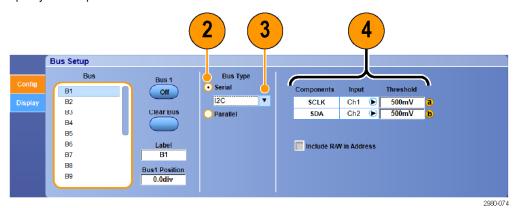

For detailed bus triggering procedures, use the following procedures: (See *Triggering on a parallel bus* on page 93.) and (See *Triggering on a serial bus* on page 96.)

To set up the bus trigger:

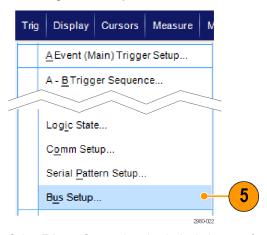

1. Select Vertical > Bus Setup.

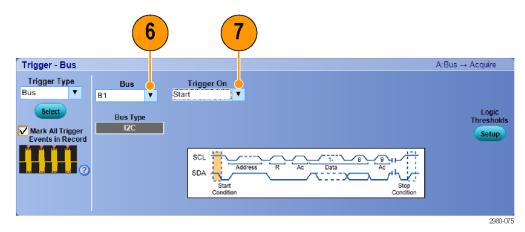

- 2. Select a bus type.
- 3. If you selected the Serial Bus Type, select the type of serial bus.
- 4. Specify the components.

5. Select Trig > Bus Setup.

6. Select **Trigger On** to select the desired trigger on feature.

7. Depending on your **Trigger On** selection, you may need to make additional selections.

Triggering on a video signal

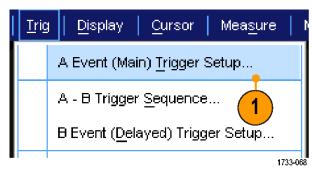

The instrument supports triggering on NTSC, SECAM, PAL, and high definition signals.

To trigger on the video fields:

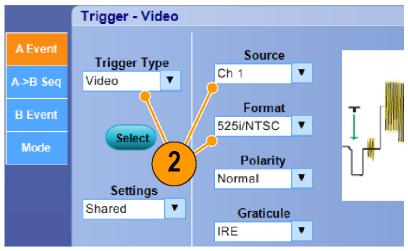

Note: The video trigger type is available only on DPO7000C, MSO5000B, and DPO5000B Series instruments.

1. Select Trig > A Event (Main) Trigger Setup....

2. Set the A trigger type and source in the A Event tab.

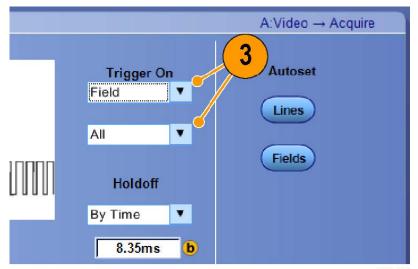

Select Format > 525i/NTSC.

1733-193

3. Select Trigger On > Field.

Select Odd, Even, or All fields.

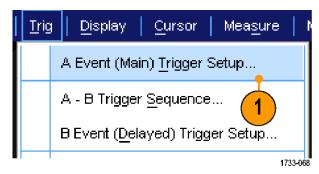

1733-199

Triggering on lines

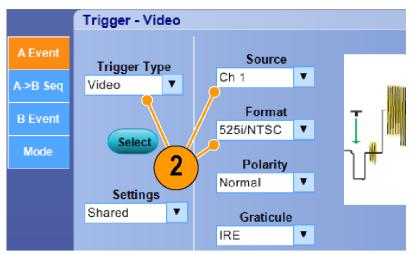

To look at the video lines in the field:

1. Select Trig > A Event (Main) Trigger Setup....

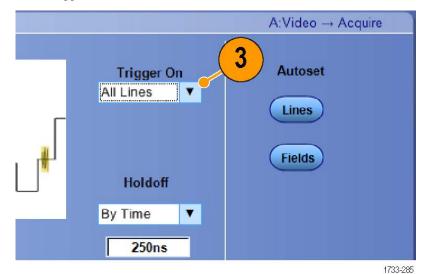

2. Set the A trigger type and source in the A Event tab.

Select Format > 525i/NTSC.

1733-193

3. Select Trigger On > All Lines.

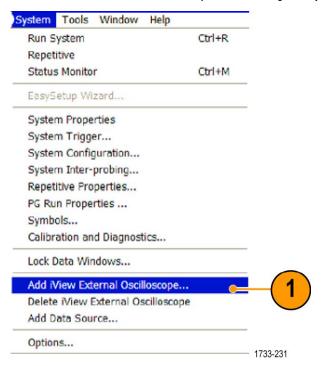

Correlating data between a Tektronix oscilloscope and logic analyzer

Almost every design is a high-speed design with fast clock edges and data rates. For these designs, you need to see the analog characteristics of high-speed digital signals in relation to complex digital events in the circuit. iView is your window into the digital and analog world. The iView capability seamlessly integrates and automatically time-correlates data from Tektronix logic analyzers and oscilloscopes, so you can transfer analog waveforms from the oscilloscope to the logic analyzer display with the click of a mouse. View time-correlated analog and digital signals side-by-side and pinpoint the source of elusive glitches and other problems in moments.

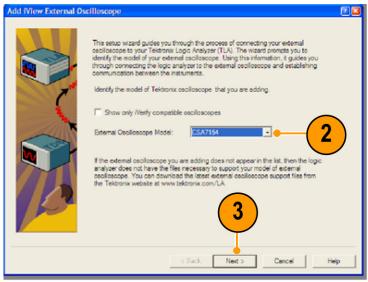

The iView External Oscilloscope Cable allows you to connect your logic analyzer to a Tektronix oscilloscope, enabling communication between the two instruments. The Add External Oscilloscope wizard, which is available from the TLA application System menu, will guide you through the process of connecting the iView cable between your logic analyzer and oscilloscope.

A setup window is also available to help you in verifying, changing, and testing the oscilloscope settings. Before acquiring and displaying a waveform, you must establish a connection between your Tektronix Logic Analyzer and oscilloscope using the Add External Oscilloscope wizard.

1. Select Add iView External Oscilloscope... from the logic analyzer System menu.

- 2. Select your model of oscilloscope.
- 3. Follow the on-screen instructions, and then click Next.

1733-232

4. See your Tektronix Logic Analyzer documentation for more information on correlating data between the logic analyzer and the oscilloscope.

Appendix A

Cleaning

Use these procedures to clean your instrument. If additional cleaning is required, have your instrument serviced by qualified service personnel.

Exterior cleaning

Clean the exterior surfaces of the chassis with a dry lint-free cloth or a soft bristle brush. If any dirt remains, use a cloth or swab dipped in a 75% isopropyl alcohol solution. Use a swab to clean narrow spaces around controls and connectors. Do not use abrasive compounds on any part of the chassis.

Clean the On/Standby switch using a dampened cleaning towel. Do not spray or wet the switch directly.

CAUTION:

Improper cleaning agents, methods, or excessive force can damage the instrument. Do not use chemical cleaning agents that might damage the plastics used in this oscilloscope. Use only deionized water when cleaning the front-panel buttons. Use a 75% isopropyl alcohol solution as a cleaner and rinse with deionized water. Before using any other type of cleaner, consult your Tektronix Service Center or representative.

To prevent getting moisture inside the instrument during external cleaning, use only enough liquid to dampen the cloth or applicator.

Appendix B

Obtaining the latest oscilloscope application and version releases

The latest version of an optional application that you ordered with your instrument may not be installed on your instrument. The following download location is a fast and easy way to get the latest software version.

To download the latest version of software, go to the home page of the Tektronix Web site (www.tektronix.com), and locate the Download section on that page. Enter the application name in the ENTER MODEL NUMBER text box, and select Software in the Select Download Type pull-down menu.

Note: The Release Notes file available on the Web page may contain more recent information than the readme.txt file contained within the downloadable executable file.

To define the search criteria, use the title of the application in the ENTER MODEL NUMBER text box. For example, use the keyword DPOJET to search for and download the latest version of DPOJET.

If you purchased the application with your instrument, your Tektronix License Key will enable you to use the application.

If you are upgrading, follow the instructions on How to Install your new Tektronix License Key in the Readme.txt file to enable the application.

Appendix C

TPP0500 and TPP1000 500 MHz and 1 GHz 10X passive probes instructions

071-2809-xx

Copyright ©Tektronix, Inc. All rights reserved.

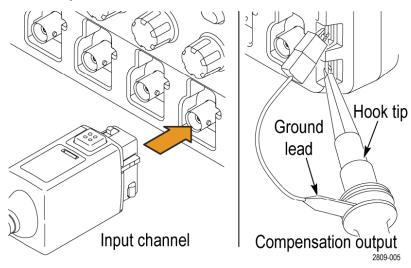

Operating information

The TPP0500B and TPP1000 10X Passive Probes are compact passive probes with 10X attenuation that are designed for use with Tektronix MSO/DPO4000B and 5000B Series oscilloscopes.

The probes have no user- or Tektronix-serviceable parts.

Connecting the probe to the oscilloscope

Connect the probe as shown in the illustrations below.

Compensating the probe

MSO/DPO5000B. Perform the following steps to compensate the probe:

- 1. Connect the probe to an oscilloscope channel.
- 2. Connect the probe to the probe compensation output terminals on the oscilloscope front panel.
- 3. Select Vertical > Probe Cal.
- **4.** Select the channel tab that the probe is attached to.
- **5.** In the Probe Compensation section of the menu, click the Compensate Probe button.

WARNING:

To avoid electric shock, only connect to the Probe Comp signal on the oscilloscope when making this adjustment.

If the probe compensation fails, verify that the signal and ground connections are secure at the Probe Comp connections on the oscilloscope. Also check that the ground connection is secure at the probe head, the rigid or pogo tip is secured tightly in the probe head, and the hook tip is securely connected to the tip.

Standard accessories

The standard accessories included with the probe are shown below.

WARNING:

To avoid electric shock when using the probe or accessories, keep fingers behind the finger guard of probe body and accessories.

Item	Description
	Hook tip
	Press the hook tip onto the probe tip and then clamp the hook onto the circuit
2766-002	Reorder Tektronix part number 013-0362-XX
	Micro Hook tip
	Use this tip to access test points in tight spaces. Press the hook tip onto the probe tip and then clamp the hook onto the circuit
2809-006	Reorder Tektronix part number 013-0363-XX
	Rigid tip
	This tip is pre-installed on the probe.
	Reorder Tektronix part number 206-0610-XX
2809-002	
	Pogo tip
	This spring-loaded tip allows compliant testing of circuit boards.
2809001	Reorder Tektronix part number 206-0611-XX
Table continued	

Description
Ground lead, with alligator clip
Secure the lead to the probe head ground and then to your circuit ground.
Reorder Tektronix part number 196-3521-XX
Ground springs
Attach the spring to the ground band on the probe tip to take measurements on
test points that have ground connections nearby (<0.75 in, std; XX in, short).
Reorder Tektronix part numbers:
016-2028-XX (long, 2 ea.)
016-2034-XX (short, 2 ea.)

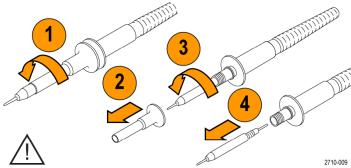

Optional accessories

The following accessories can be ordered for your probe.

Accessory	Tektronix part number
Ground Lead, Clip-on, 6 in	196-3198-xx
Ground Lead, Alligator, 12 in	196-3512-xx
MicroCKT Test Tip	206-0569-xx
Circuit Board Test Point/PCB Adapter	016-2016-xx
Compact Probe Tip Ckt Board Test Point	131-4210-xx
Wire, spool, 32 AWG	020-3045-xx

Replacing the probe tip

Order Tektronix part number 206-0610-xx for rigid tip replacement, or order part number 206-0611-xx for pogo pin replacement.

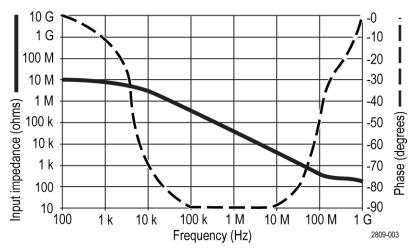

Securely tighten the insulator and new tip before using the probe.

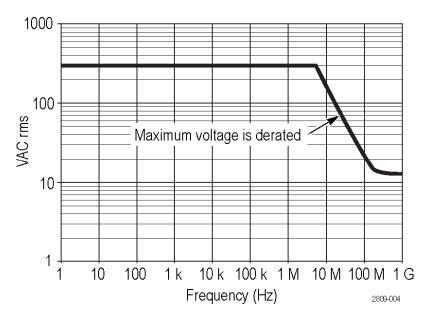

Specifications

Table 1: Electrical and mechanical specifications

Characteristic	TPP0500/B	TPP1000
Bandwidth (-3 dB)	500 MHz	1 GHz
System rise time (typical)	<700 ps	<350 ps
System input capacitance	Rigid tip: 3.9 pF ±0.3 pf Pogo pin tip: 5.1 pf ±0.5 pf	
System attenuation accuracy	10:1 ±2.2%	
Probe series resistance @DC	9.75 MΩ ±0.5%	
System input resistance @DC	10 MΩ ±2%	
Propagation delay	~5.67 ns	
Maximum input voltage	300 V _{RMS} CAT II	
Cable length	1.3 m, ±3 cm	

Performance graphs

Refer to the reference lead derating curve above when making floating measurements.

Characteristics	Description	
Measurement Category Descriptions	Category	Examples of Products in this Category
	CAT III	Distribution-level mains, fixed installation
	CAT II	Local-level mains, appliances, portable equipment
	CAT I	Circuits not directly connected to mains.
Pollution Degree 2	Do not operate in environments where conductive pollutants may be present (as defined in IEC 61010-1). Rated for indoor use only.	
Additional Safety Standards	UL61010-031, 2010.	
	CAN/CSA-C22.2 No. 61010-31/A1:2008	
	IEC61010-031;IEC 61010-31/A1:2008	

Equipment Recycling

This product complies with the European Union's requirements according to Directive 2002/96/EC on waste electrical and electronic equipment (WEEE). For more information about recycling options, check the Support/Service section of the Tektronix Web site (www.tektronix.com).

Appendix D

P6616 General-Purpose Logic Probe instructions

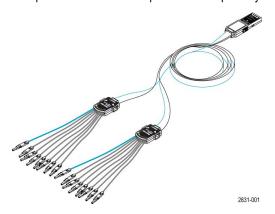

071-2831-00

Copyright ©Tektronix, Inc. All rights reserved.

Product description

The P6616 general-purpose logic probe connects the Tektronix MSO/DPO5000B Series and MSO4000B Series of mixed-signal oscilloscopes to digital buses and signals on your target system. The probe contains 16 data channels split between two lead sets (GROUP 1 and GROUP 2).

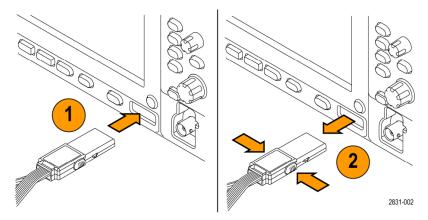

The first lead in each set is identified by blue insulation, and the remaining seven leads are gray. All leads include a ground connection at the tip. You can connect the probe leads separately to the target system, or group the leads together using the probe tip holders.

Connecting the probe to the oscilloscope

Connect the probe as shown in the illustration below.

- 1. Insert the probe label-side up into the connector on the oscilloscope.
- 2. To remove the probe, squeeze the buttons on the side and pull out the probe.

Connecting the probe to your circuit

Attach the probe to the circuit using the connectors and adapters shown on the back of these instructions. Select the best method for your needs, and then proceed to Setting up the Probe.

Setting up the probe

To set and view the digital channel parameters, do the following:

On MSO/DPO5000B Series instruments, select Vertical > Digital Setup> or push the D15-D0 button.

On MSO/DPO4000B Series instruments, push the D15-D0 button.

The parameters listed below can be set on each digital channel:

- Threshold voltage and vertical position (the default threshold setting is 1.4 V
- Signal height and position (set once for all 16 channels)
- · Channel label

To set and view bus characteristics, do the following:

On MSO/DPO5000B Series instruments, use the controls in the Bus Setup menu.

On MSO/DPO4000B Series instruments, push the B1 to B4 buttons.

The setup screens allow you to set and view bus characteristics such as:

- Clock type
- · Bus type (Serial or Parallel)
- · Bus width
- Display format (Hex, Binary, or ASCII symbols)

Parallel bus setup information is resident on some oscilloscope models. However, for other buses such as SPI and I2C, you must have the appropriate option. See your oscilloscope manual or product data sheet for nomenclature and ordering details.

Functional check

Logic activity immediately displays on all connected, active channels. If you do not see an active signal:

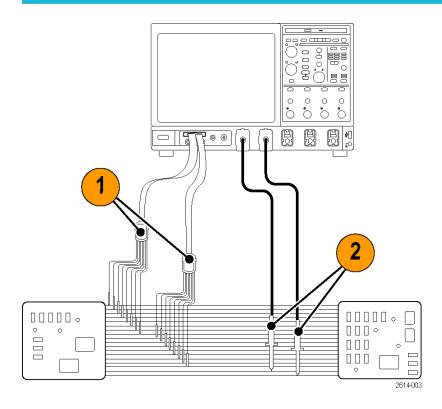

- Push the Trigger button.
- 2. Select Edge for trigger type.
- 3. Select the channel that you are setting up as the source.

On MSO/DPO4000B Series instruments, push the **Autoset** button.

If you do not see an active signal, try another probe channel (or analog probe) to verify circuit activity at the test point.

Typical application

- 1. Use the P6616 probe to view digital signals on a system bus.
- 2. Use an analog probe, such as the TPP0500/B or TPP1000 passive probe to view analog waveform information.

Accessories

The following standard accessories ship with the probe and are shown in the illustration on the following page.

Item	Description	Quantity	Part number
_	Logic probe accessory kit	Item 1–6	020-2662-XX
1	Extension ground tip	1 set of 20	020-2711-XX
2	Probe tip	1 set of 20	131-5638-11
3	IC grabber	1 set of 20	020-2733-XX
4	Probe tip holder	2 ea	352-1115-XX
5	8" Ground lead	1 set of 2	020-2713-XX
6	3" Ground lead	1 set of 8	020-2712-XX
	Instructions ³	1 ea	020-2712-XX

These optional accessories can be ordered for your probe:

Description	Part number
P6960 Probe D-MAX Footprint to Square Pin Header Adapter	NEX-P6960PIN

³ Instructions are included with the probe, but not in the accessory kit. The instructions can be downloaded at www.tektronix.com/manuals.

Specifications

Table 4: Electrical and mechanical specifications

Characteristic	Description
Input channels	16 digital
Input resistance	100 kΩ ±1.0%
Input capacitance	3.0 pF
